Rammohun tried hard to get the best possible men on the spot for teaching purposes, and in this he was fortunate enough. Sandfort Arnot, assistant editor of Mr. James Silk Buckingham's *Calcutta Journal*, was engaged in June, 1824, as a teacher of English for his school. But as Arnot was soon found guilty under the Press Ordinance of 1823, he had to leave the country at once. Some gentlemen of the locality, headed by Gurudas Mukherjee, sent in a memorial on 13th October, 1824, to the Government for getting the order rescinded, but to no purpose. Efficient teachers like Sinclair and Turnbul served the school sometime or other between 1824 and 1830 as Head Master. Mr. William Adam, friend and disciple of Rammohun, was one of the Visitors of this school. He wrote in 1827:

> "Two teachers are employed, one at a salary of Rs. 150 per month, and the other at a salary of Rs. 70 per month; and from 60 to 80 Hindu boys are instructed in the English language. The doctrines of Christianity are not inculcated, but the duties of morality are carefully enjoined, and the facts belonging to the history of Christianity are taught to those pupils who are capable of understanding general history."[1]

Though the school was especially meant for the children of the poor, yet Rammohun and his friends, Dwarkanath Tagore and others, who were also donors, ungrudgingly sent their wards to this institution. Sons of the poor and the rich were treated alike, no

distinction being made in respect of teaching or any other thing. This was noticed in newspapers, too. *The Bengal Chronicle* (January 10, 1828) in the course of an account of the annual examination and the prize distribution of the boys—and it was done at that time with some ceremony—says:

> "To the intelligent observer it must also have been an additional source of gratification to notice among the scholars several of the children of the native gentlemen who contribute to the support of the school, in no respect distinguished from those who receive their education gratuitously."[2]

1. For the early history of this school, the reader is referred to Mr. Brajendra Nath Banerjee's "Rammohun Roy as an Educational Pioneer" in the *Journal of the Bihar and Orissa Research Society* for June, 1930.

2. Cf. *Rammohun Roy and Progressive Movement* by Dr. J. K. Majumdar, p. 264.

Progress shown by the students at the annual examinations, pleased those present very much. Prominent Europeans and Indians attended these functions. They included David Hare, Sir Edward Ryan, Dr. R. Tytler, William Adam, and Dwarkanath Tagore. Some of them used to examine the students while others distributed the prizes to the best of them. Boys received prizes for regular attendance also. Newspapers did not grudge space in reporting these functions in some detail. The account of the annual examination of 1829 in *Bengal Hurkaru* gives us a clue as regards the course of studies followed in this school. *Bengal Hurkaru* (February 28, 1829), writes:

> "A statement was put into the hands of the Examiners intimating that the pupils of the first class were competent to be examined in the first Book of Pope's Homer's Odyssey, in Goldsmith's History of England, in Joyce's Dialogue, in the first Book of Euclid's Elements, in Murray's English Grammar, in Goldsmith's Geography, in the solution of Problems on the Terrestrial Globe, in the Rules of Arithmetic as far as those which related to cases of compound proportion, and in the translation of passages from English to Bengalee and *vice-versa*, and in those books in which they were actually examined, they acquitted themselves to the high satisfaction of the gentlemen present. The other classes were examined according to their respective degrees of advancement and the whole was concluded by the recitation of a piece and by the presentation of the prizes consisting of several valuable and useful books provided by several gentlemen present for that purpose."[3]

There were altogether four classes in the school. The instruction commenced from the three R's. So the immense progress made by the students of the first class in so short a time was simply astonishing, and reflected great credit on their teachers as also on the management of the school. The *Hurkaru* also gives the names of the boys, class by class, who most distinguished themselves and who received the prizes both as rewards for proficiency and regularity of attendance:

> "First Class: Gunganarain Bhose, Bissonauth Mittre, Dwarkanauth Mitter, Mothooranauth Tagore, Bunnymudhub Day, Corraram Mittre and Brijonauth Chunder.
>
> "Second Class: Bholanauth Mittre, Nobinmaudub Day and Modoosudun Dhurr.
>
> "Third Class: Ramapersaud Roy and Debendranauth Tagore.
>
> "Fourth Class: Modoosoodun Chukerburtty, Raja Baboo, Hurrimohun Ghose and Jogeschunder Ghose."[4]

The editor of the *Calcutta Gazette* who was himself present and witnessed the examination of the boys, writes in the issue of above date, of the founder of the Institution in these glowing terms:

> "It becomes us to state here that although the Anglo-Indian school is partly assisted by public contributions, yet the greater portion of its expenses is paid by one of the most liberal and enlightened of native gentlemen—one whose name has been long before the world, whose talents are surpassed by his worth only, and whose efforts to ameliorate the intellectual condition of his countrymen, can never be too highly appreciated. As the founder of the Institution, he takes an active interest in its proceedings, and we know that he is not more desirous of anything than of its success, as a means of effecting the moral and intellectual regeneration of the Hindoos. We were sorry to learn that indisposition prevented his witnessing that success yesterday; but whatever may be his state, he must feel the satisfaction that every benevolent mind enjoys for having been useful to mankind,— and it must always be to him a pleasing prospect, that when millions yet unborn shall hail the return of knowledge to this country, they will associate that circumstance with the name of Rammohun Roy."[5]

The students of the school who included such stalwarts as Ramaprasad Roy and Debendranath Tagore, cultivated sympathy and love for one another by concerted action. They joined their brothers of the same age, of the Hindu College and the Pataldanga School in founding a debating society so far back as 1830. They gave it the name of Anglo-Indian Hindu Association and proposed to discuss subjects pertaining to learning. Discussion of religious subjects was precluded.

Two years later, in December 1832, we find the students of the Anglo-Hindu School alone taking initiative in starting another association with the sole object of 'the perfect cultivation of the Bengali language.' Associations had already been started by the elders for this purpose. But among the students with whom mastery of English was the only thing they wished for, establishment of such a society was very much surprising. But in the Raja's school an ideal of true culture was set before the students, so much so that even from their early days they contracted a love for their people and country and strove to ameliorate them to the best of their power. This association, called Sarbatattwa Dwipica Sabha, was formed at Raja Rammohun Roy's school at Simla on the 30th December, 1832, with Ramaprasad Roy as President and Debendranath Tagore as Secretary. The account of this inaugural meeting will show the currents and cross-currents of thought in the mind of the young students of the Raja's school. Let me quote in part from *Samachar Darpan*, dated January 19, 1833:

> "When the individuals present had taken their seats, Sreejoot Joygopal Bushoo observed that 'as no Society has been formed in Calcutta for the cultivation of the Bengalee language, we have proposed to establish one for that purpose, and we believe that the country will be greatly benefited by its influence.' Baboo Debendranath Thakoor

3. *Ibid*, p. 269.
4. *Ibid*, p. 270.
5. *Ibid*, p. 271.

then observed that, 'It was most proper to thank those who had proposed to form this society and acknowledge their virtue; for if it be permanently established the literature of our country will be fully developed. At present we see many societies formed for the cultivation of the English language. You may therefore conclude, Gentlemen, that if this society be formed for the cultivation of pure Bengalee, its members will become perfectly versed in it."

When Raja Rammohun Roy left for England in November 1830, he made over the charge of the school to its head teacher Purna Chandra Mittra. Since then the school was run by him and came to be known as Purna Mittra's school. In 1834, the school was renamed the Indian Academy. The celebrated Bhudeb Mukherjee was a student of this school.

The Indian Academy was in existence for several years more. We find a notice of the annual examination of the students of the Academy in the *Samachar Darpan* of 19th September, 1835. The examination was held in the upper rooms of the *Hurkaru* Library on Wednesday, the 16th September. Bengali was made a subject of regular study in July-August 1838.[6] The Indian Academy was no longer a free school.

II. The Union School

In point of time Jagomohan Bose's Union School at Bhowanipore claims priority over Raja Rammohun Roy's Anglo-Hindu School. It was founded so early as in 1793. But it came to the public view long afterwards by 1828, by virtue of its intrinsic services to the cause of modern education. Of the origin of the Union School, William Adam writes in his first Report on the State of Education in Bengal (submitted to the Government on the 1st July, 1835) thus:

> "The first English School of this kind is situated at Bhowanipore, and is called the Union School, in consequence of its having been formed by the union of two such schools respectively established at Bhowanipore and Kidderpore. They were established without any communication with Europeans by Native gentlemen for the instruction of Hindoo children in English, and were at first supported by voluntary subscription." (P. 36).

It should be noted here that Adam gives Jagomohun Bose's school the credit of being the first English institution of its kind ever started by Indians in this part of the country. Students of this school made much progress in their studies, both Bengali and English. Special emphasis was given, however, on the proper study of English. It has been said that scarcely a person was found in Bhowanipore who was not some time or other instructed in this school. Respectable Europeans and Indians paid visits to it time and on and expressed great satisfaction at the progress of the students. Like the boys of the prominent seminaries of Calcutta, they too acquired proficiency in English. Reports of examinations held here found their way to newspapers, from which we learn that, at least up to 1829 Jagomohun Bose bore all the expenses of the school himself. The *Samachar Darpan* of October 28, 1828, writes to the following effect:

> "At Bhowanipore there is an English school. Many Englishmen went there to conduct the examination of its boys. On its roll are four hundred students. They one and all read English. All the expenses of this school are paid by a generous-hearted Bengali gentleman. His name has not been made public, but his generosity will evoke praise from everybody."

Another account appeared in the same paper on March 7, 1929. In this occurs:

> "In the last week examination of the boys of the Bhowanipur school took place. The school was founded about thirty years ago by Srijut Jagmohun Bose . . . . We learn that he is paying all the expenses of the school as a religious duty . . . . Boys of the Hindu College, of Srijut Rammohun Roy's and of Srijut Jagomohun Bose's schools are giving sufficient proof of their efficiency in English in the examinations held before the European gentlemen." (Free rendering from Bengali).

By the middle of 1829 the Union School was reorganised and opened to pay-scholars too. Of the subsequent career of the school, Adam again writes:

> "In May, 1829 they were placed upon an improved footing, and in the management of them Europeans and Natives were then first associated. They were opened to pay-scholars, and the Calcutta School Society made them a monthly grant towards their support; but that resource not proving adequate to their wants, they applied to the General Committee of Public Instruction for assistance. Their immediate wants extended only to about 500 rupees for the necessary school-furniture; but the General Committee placed 1,000 rupees at the disposal of the School Society for the use of each school considering it to be 'a great object to establish schools of this description which might in time serve as preparatory steps to the Hindoo College, and relieve that institution of part of the duty of elementary tuition.' The united school is supported partly by public subscriptions and partly by the fees of the scholars, of whom there are at present (that is, in 1835) about 150. This is a day-school, instruction being given every day of the week from ten to three except on Sundays." (*First Report*, P. 36.)

Jagomohan Bose, the founder of the Union School, died some time in January, 1853. I have found, in the files of *The Hindoo Intelligencer* of the 24th January, 1853, a letter by "An Inhabitant of Bhowanipore" dated January 20, evidently sent just after Jagomohan's death. From this letter we can learn much of the man and his institution. Let me give it here *in extenso*:

6. *Samachar Darpan*, 27th April, 1839: Events of 1245 B.S.

"The sudden death of Baboo Jagomohon Bose of Bhowanipore, though at an advanced age, is deeply regretted by men of all classes. The eminent merits of the deceased; his placid and calm temper, his zeal for the cause of education; and his labours for its diffusion, are universally known. Throughout his whole life and throughout his connection with this place, no single inhabitant has ever had any cause but that of being pleased with his conversation and rejoiced at the pains he took disinterestedly for their welfare. The name of David Hare deserves to be embellished in letters of gold in the hearts of many of our countrymen at large and so is the name of Baboo Jagomohon Bose in a limited sphere. More than 37 years past, before many of the metropolitan Institutions had their existence. Babu Jagomohon Bose had a school at Bhowanipore where English lessons had been daily given and prepared. Though not a professional teacher, his talents and leisure hours were devoted to the improvement of children of all classes. With the cooperation of Sir Edward Ryan and his relative Major Ryan, with the assistance of David Hare and of the Ghosal Babus of Kidderpore he made his school attain a very respectable name among the educational establishments in the country,—and though the Institution is not now in a similar condition, it was only on account of a broken constitution and the infirmities of age hastened by family losses, that he was unable to take so much pains for it as he did before, and that too for the setting up of a Missionary Institution on a very large scale in the place where to the utter shame and loss of our countrymen many send their children. One circumstance must be added which is that almost all persons now holding respectable and creditable situations under Government and the agencies resident at Bhowanipore were educated in the Union School and formed their habits of life and business under the eyes of this man before whose time none of the middling and none of the higher classes set turbans on their heads and went to work. Such a man deserves to be remembered and his admirers are thinking of something best calculated to commemorate his memory in a measure suitable to their means."

The Union School continued for a long time after the death of its founder. It was again amalgamated with another school early in 1874. I find in the *Bharat Samaskarak*, a Bengali weekly, dated 10th April, 1874 that

"The Bhowanipore Union School has been amalgamated with the Tollygunge Suburban School. A beautiful site has been selected for the erection of a building for the school." (*Translated from Bengali.*)

This amalgamated institution is the modern South Suburban School of Bhowanipore. *In the Diamond Jubilee Report, 1934*, of the school I also find:

"A large number of Middle English and Primary schools catered to the educational needs. On the 13th of February, 1874, two such small schools, one located at Bhowanipore and the other at Kalighat, were incorporated by some of the public-spirited gentlemen of the locality into a High School, which ultimately came to be known as the South Suburban School." (P. 1).

The building for the school was not, however, erected on the site, as referred to by the *Bharat Samaskarak*. It sat for the first sixteen years in different rented premises. We learn from the *Golden Jubilee Report, 1934* that

"The newly-started school was originally located near the Hazra Tank, which was subsequently converted into the Hazra Square. Later in the same year (1874), however, the school was removed further north to a house in Gobinda Ghosh Lane. ....On the 1st of March, 1875, the school was removed further in the heart of Bhowanipore and was housed in the big barracks belonging to Moulvi Habibulla Hossain on Russa Road, a little to the north of the premises now owned by the Empress Theatre . . . The school continued to be located in this rented building till the 15th of June, 1890 .....The present site at Gopal Banerjee Street was acquired by the authorities in 1888 and the present building was constructed at a total cost of about Rs. 40,000.....The major portion of the amount required for acquiring the land and for erecting the building was met by public subscriptions." (Pp. 2-3).

Among those who were instrumental in incorporating the two schools into the South Suburban School, the names of Annada Prasad Banerjee, its Founder-Secretary, Dr. Ganga Prasad Mookerjee, the renowned physician of Bhowanipore and father of Sir Asutosh Mookerjee, and Sir Ramesh Chandra Mittra, Justice of the Calcutta High Court, deserve special mention. Pandit Sivanath Sastri, one of the prominent Brahmo leaders and literary men of the late nineteenth century, was the first Headmaster of this institution and served as such from February 1874 to April 1876. Sir Asutosh Mookerjee, the great educationist and jurist, was one of the early alumni of the United South Suburban School. The school is still flourishing as a premier educational institution in Bengal with many a feature special to its own.

III. Hare's School

Like the Anglo-Hindu School and the Union School, Hare's School, too, did yeoman's service to the cause of education in the first half of the nineteenth century. The Calcutta School Society almost ceased to function as such early in 1833. David Hare was forced to abolish his famous Arpuli Pathsala for want of funds. The English School attached to the Pathsala was united with the Society's model English School at Pataldanga. This school contained a Bengali Department where Bengali was taught exclusively. David Hare undertook the management of this institution, which he did but too gladly till his death. The School flourished greatly as a free academy under Hare's personal care and supervision. It served as a feeder to the top classes of the Hindu College and the newly established Medical College. Its scholars in the Hindu College, better known as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the School Society's scholars, were always among the best boys there.

The Government grant of Rs. 500 per mensem to the Calcutta School Society was originally intended to meet the expenses of the Society's indigenous schools. The diversion of the grant to the maintenance of the English School, a different purpose altogeher, was not officially taken into cognizance up till late 1840, by the General Committee of Public Instruction, who were charged with the control and management of the Government education funds. Apprised of the useful purposes for which the money was being spent for these years, the General Committee favourably wrote to the Government in a letter dated 30th October, 1840:

"With reference to the School Society, we called upon Mr. Hare for a report on its present state; including an account of its funds and expenses. This has been furnished to us up to the end of the past year. From this report we find that although the grant of Sicca Rupees five-hundred has been diverted from its original object, of improving the indigenous schools kept by private individuals, it has been most usefully employed in educating a certain number of students in the Hindoo College and in supporting a large and Preparatory School in the neighbourhood, which has been of much use to the Hindoo and Medical College. We therefore propose to continue to appropriate the assignment as at present, while Mr. Hare is connected with the School; and that he be required to furnish us with periodical reports on its state and prospects. When Mr. Hare discontinues his connection with the School the assignment may be paid directly to the Committee."

The Government intimated to the Committee on 15th December, 1840, in reply to the above letter that they had no objection in the proposed arrangements.[7]

But David Hare did not live long to act up to these arrangements. He was spared to submit only one report before his death. In November 1841, he sent an account of the school to the General Committee, a brief summary of which has been given only, in their *Report* for 1840-42 (p. 28). This speaks a good deal of the efficiency with which the school was being conducted. The summary runs as follows:

"438 boys were instructed in various branches of English and Vernacular learning under Native Teachers, (the further advanced being fit for admission into the Senior Department of the Hindoo College) for the sum of 530 Rs. of which the balance of 30 was paid by Mr. Hare. That gentleman informed us that it afforded him much pleasure to say that in his opinion the school was then in very good order; further that he was in the constant habit of visiting it daily, at irregular times, and frequently examined some of the boys and classes in their different lessons, which enabled him to speak with confidence as to the results.

"Of the 21 scholarships awarded in 1841-42 to the Hindoo College, seven[8] were gained by boys originally admitted from Mr. Hare's School. The School in question also furnishes numerous pupils to the Medical College."

Hare died on the 1st June, 1842. The General Committee of Public Instruction gave place to the Council of Education in January this year, with their powers somewhat circumscribed. According to previ-

David Hare

ous arrangements, the charge of Hare's school naturally fell on this Council. They found that

"The pupils of this school had hitherto been admitted entirely by Mr. Hare, that they paid nothing for Schooling, Books or Stationary, that the discipline was well maintained by Mr. Hare personally, and that he paid from his own funds any incidental expenses, in excess of the Government allowance of five-hundred rupees.

"There were on the 13th June, in this school 463 boys divided into 12 classes. Their ages are from 7 to 15 years." (*Report* for 1840-42, p. 28).

Regarding the management of the school, the Council of Education delegated their powers to its Section[9] for the Hindu College. The Section proceeded with their business in the following way:

7. Vide *Report of the General Committee of Public Instruction*, etc., for 1839-40, Appendix No. II. Both the letters of the General Committee and the Government of India have been inserted in it. I will mention the Report of the General Committee as simply *Report* hereafter.

8. Peary Churn Sircar stood first, and was one of the seven.

9. The Section of the Council of Education for the Hindoo College was its reconstituted Managing Committee. But it had less powers than formerly. Under the arrangement sanctioned by Government on the 20th October, 1841, two members of the Council of Education were elected members of the Hindoo College Managing Committee. Henceforward the President of the Council of Education acted also as the President of the Committee.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The Section considered it expedient to provide for the continuance of the School, making alteration in the system gradually, and with caution, so as ultimately to incorporate it with the Institutions subordinate to the Hindoo College, and recommended that a Visitor should be appointed to supply as far as possible the place of Mr. Hare in maintaining the discipline of the School. The Section proposed themselves to regulate the admissions, and to impose a rate of one rupee per month on future pupils, reserving to themselves a discretion to admit free Scholars and so regulating the admissions as to provide, that the free scholars of Mr. Hare's foundation should hereafter be reduced to, and remain at, one hundred, the total number of pupils being five hundred. They contemplated also appropriating the additional funds resulting from the introduction of the new system in providing salary for the Visitor and meeting the extra charges of the Institution. (*Ibid.* p. 28).

The Government sanctioned and approved the plan, 'subject to modification at any time by Government, whenever it might appear to be failing in maintaining the efficiency of the Institution.'

Work was commenced soon under the new system. Mr. R. Jones, Head Master of the Junior Department of the Hindu College, was appointed Visitor. The establishment, however, remained same as before. It is found that on the 28th December, 1842, there were 410 old free boys and 74 pay-scholars, the latter being the new admissions.[10]

Early in 1843 the school had to change its venue. It had got no building of its own. The school sat for upwards of twenty years in a house in Pataldanga owned by Raja Nrisinghachandra Roy on a monthly rental. The Section was asked in March 1843 to remove the school from there at a month's notice. They 'represented to him the impracticability of quitting it at such a short notice, and the injury to be apprehended to the institution by being turned out so abruptly from the house it had occupied for upwards of 20 years, in which his own relatives had been educated.' But these representations were of no avail. The authorities were compelled to remove the school, temporarily, to the premises of the Hindu College Pathsala and the Pathshala to the lower part of a neighbouring house,[11] occupied by the Principal of the Hindu College. The school was charged the same rent as it had to pay to Raja Nrisinghachandra. But this rent was earmarked by the Council of Education for building a house for the school. The grounds attached to the Pathsala to the west of the College Street belonged to the Hindu College. The managers of the College gladly parted with them for the erection of a building for the School over there. Public subscriptions were opened for the purpose. I find the school removed to its new buildings on the above site in 1847. The buildings were erected partly from public subscriptions, but mainly with Government money to be realised from the school in monthly instalments. It should be noted that the school also paid well over one thousand rupees from its own funds in the course of the construction.

During the transition period the school continued to maintain its reputation as a premier institution in Calcutta. V. L. Rees, Professor of Mathematics in the Hindu College, examined in 1844 the boys of the top classes of the school in Mathematics and reported that 'generally speaking, the boys have acquitted themselves well.' In conclusion he stated: 'It is but justice to add, the 2nd class of the Hindoo College receives annually from the school its best recruits and the greater number of my best scholars in the College were nursed in the Seminary."[12]

In the following year Mr. R. Jones, the Visitor of the School, also reported:

"The studies pursued in the first class correspond to those of the 2nd class of the Hindoo College, and the students who are annually admitted from this school enter into the second and third classes of the Hindoo College. In some instances they have been found qualified for the first class. Seven scholarships of the Hindoo College, *viz.*, 5 senior and 2 junior, are at present held by students of the School Society's School."[13]

Not only the Hindu College but the Calcutta Medical College, too, got their best recruits from this institution. To maintain its superior standard the Government sanctioned in 1845 four junior scholarships for the school.

The institution could no longer be regarded as a free school, its character as such having rapidly changed. In 1844 there were only 81 new admissions that is, pay-scholars, the remaining 369 enjoyed free studentships.[14] But there were only 182 free students in the school in 1845. This number fell to 167 in 1846. In these two years the number of pay-scholars rose from 313 to 350. A connected account of the later career of this institution, which had already turned a pay-school, is not warranted here. We will, however, note below some of its salient features.

It was a rule with Mr. Hare to appoint compe-

10. *Report* for 1842-43, p. LXXV.

11. The Principal of the Hindoo College had his quarters in this house, for which he got a monthly allowance of Rs. 140 as house rent from the College. Dewan Ramcomul Sen was the owner of this historic building. The Calcutta Medical College was first opened in this house and held its classes here for about a year. The Albert College of Keshub Chunder Sen, the grandson of Dewan Ramcomul, was also housed in these premises. The modern Albert Buildings, College Square, stand on this site.

best Indians as teachers of his school. Because he thought that the right sort of instruction in its elementary stages could be given to the Indian boys more efficiently by their own countrymen than by foreigners. Hare used to select teachers from amongst the best students of the Hindu College. Tarachand Chakravarty, Rasik Krishna Mallik and Krishna Mohun Banerjee all of the Hindu College served as teachers of the Pataldanga school, which was but the predecessor of this school. Durga Charan Banerjee, father of the famous Surendra Nath Banerjee, himself a meritorious student of the Hindu College and later a noted physician of Calcutta, was for some time in the late thirties and early forties of the last century, the Head Master of Mr. Hare's School. Barring a few exceptions, the tradition was kept up. Peary Charan Sircar, an ex-student of Hare's school, and one of the celebrated educationists of mid-nineteenth century, was appointed Head Master of this institution in August 1854 and continued in his post till 1863. His connection with the School did not cease before 1867.

Since its foundation the school had been open to the Hindus only. It was in 1852 that the School was thrown open to all. I find in the *Report of the Council of Education* (from 30th September, 1852 to 27th January, 1855):

> "School thrown open to all classes of the community. The exclusive footing on which the school had, from its foundation, been carried, has been abolished, and since November 1852, it has been thrown open to all classes of the community. Two European Christians, two Native converts and two Mussulman boys have been admitted and the Institution is conducted with as much order and harmony as it was previous to its being thrown open."

Now something should be said regarding the management of the School. We have seen that just after the death of Mr. Hare the 'Section of the Council of Education for the Hindoo College' took over its charge. Since then the school was also known as the 'Hindu College Branch School.' The Managing Committee or, to be more precise, its Indian members relinquished their charge of the Hindu College on 1st February, 1854. Henceforth, the Hindu College came directly under the Council of Education. The Branch School, too, became a full-fledged Government institution. On the 15th June, 1854, the Junior Department of the Hindu College was transformed into the Presidency College, and the Junior Department retained the name of the Hindu School. The College and the School were to be regarded as two distinct institutions. But the latter was subordinate to the former. Since then Hare's school was officially known as the Colootollah Branch School. The Council of Education again resigned on the 27th January, 1855, in favour of the Director of Public Instruction newly created by the Government. The Collotollah Branch School, like other Government institutions, came under the direct control of the Director of Public Instruction.[15]

It has already been said that when the new arrangements were made in 1842, the school was divided into 12 classes, and a flat rate of rupee one was charged as monthly fee of the new entrants. I find the classes increased to fourteen in 1844; but the rate of fees had remained the same. It was in May 1846 that the fees were enhanced for the first time in the following scale:

> "The students admitted before 1st May 1846, will continue to pay monthly, ... 1 Rupee.
>
> Students admitted or promoted to the 1st and 2nd classes from 1st May 1846, to pay monthly 3 Rupees.
>
> Students admitted to the lower classes from 1st May 1846, to pay monthly.....2 Rupees."[16]

These fees being still lower than those in many other schools of the same standard, poorer sections of the community resorted to this school in large numbers. For efficient teaching classes were increased to sixteen. By the year 1857 the number of students rose to 571. To cope with this unwieldy number, the authorities deemed it expedient to raise the fees again in 1857:

> "The number of pupils at the beginning of the past session had risen so high, that it was deemed expedient in October last to reduce it by raising the schooling fees in the last 13 classes from 2 Rupees to 3 Rupees monthly at which rate the three highest classes, or what constituted the Senior Department had been paying for some years."[17]

Many students of this school made a mark in Society as also in the respective spheres of their life. In this connection the names of such stalwarts and pioneers as the Rev. K. M. Banerjee, Peary Charan Sircar, Rajnarain Bose, Dr. Mahendra Lall Sircar, Dinabandhu Mitra, Sishir Kumar Ghose, Sir Gurudas Banerjee, Romesh Chunder Dutt and Sir P. C. Ray naturally came to one's mind. There were a good many others who acquired the same, if not more, repute.

The school, though always popularly known as Hare's School, had its name changed from time to time. In the official Reports, it was called the School Society's School, the Hindu College Branch School or, simply, Branch School, and the Colootollah Branch School. It was in 1867 that its name was finally changed to 'Hare School.' It was also removed to its present buildings that year. The school still exists, disseminating light and culture among our countrymen.

INDIA'S NATIONAL INCOME

By GIAN PARKASH KAPUR, M.A.

Concept of National Income

National income is the money equivalent of the aggregate net output of goods and services produced in a national economy over a period of time, usually a year. As distinct from the nation's accumulated capital wealth it is a fund which meets the yearly consumption needs and productive requirements of the community. Its size and allocation patterns are, therefore, the determinants of the nation's material welfare and the potentialities of its economic system. National income can be measured at various stages of the "flow-process of economic activity": at the point of production, distribution or consumption, but measured at all the three points the totals should be identical. This triple approach reveals the three basic aspects of the economy and affords a check on the correctness of the alternative national income estimates.

National income studies concentrate on currently produced resources and their allocation. They have been carried on in most countries for the last several years. In the beginning their scope was, however, limited to gauging certain broad trends in the economy but the shift of emphasis in economic thinking from classical "equilibrium analysis" to "national aggregates" evoked a much deeper interest in this direction. National income estimates are now designed to provide useful information on the levels of the generation, distribution and consumption of income in different sectors of the economy and their constituent transactions. A memorable development in this field was the emergence of social accounting—for which a model system was first presented by Dr. Richard Stone some years ago. Social accounting approaches national income studies by setting out the economically distinct transactions among different branches of the economy and obtains national aggregates by a suitable combination of these transactions. But though the presentation of social accounts is done by several Western countries like U.K. and France, Netherlands is perhaps the only country which may claim to have a proper social accounting system. A country like India has obviously to travel a long distance before it can construct any elaborate social accounts. The preparation of reliable social accounts and other national income estimates is a constant chase towards perfection. Numerous conceptual as well as practical problems, statistical difficulties and arbitrary judgments stem out during the process. Errors and omissions are common and the results obtained prone to criticism on the score of their reliability, coverage or completeness and the validity of the underlying assumptions. In the case of India there are special difficulties and the resulting imperfections greater as compared to the countries with longer traditions of national income studies. Nevertheless, national income estimates furnish a wide view of the anatomical and structural basis of the economy. They measure how much the various sectors of the economy have produced, distributed and consumed and if they are available over a number of years it becomes possible to appraise the trends in the country's economic growth and by dint of analysis to associate them with various factors. They yield data on such significant topics as capital formation and depreciation, personal income and expenditure, the productivity of various industries and the effect of capital investment on them—all indispensable for "testing in the light of a record of the past and the immediate present the over-changing theories of economic behaviour, diagnoses of economic problems and pleas for economic reform." But in order to be really useful national income estimates have to be so wide in their scope as to give all the relevant breakdowns; they have to be consistent in respect of their coverage, techniques and valuations computed; and they have to be carefully interpreted, the basic assumptions underlying them, the accuracy of the statistical data used and their levels, trends and short-term variations have to be scrutinised.

A Historical Prologue

The pioneer attempt to assess India's national income was made by Dr. Dadabhai Naoroji in his book *Poverty and Un-British Rule in India*. For the years 1867-70 he estimated the total income of British India at 340 million pounds per year and a per capita income of Rs. 20 or 40 shillings. He contended that the income available to people in India did not suffice for their bare needs and, therefore, led to the depletion of the country's capital resources. Dr. Naoroji's estimate was followed by several unofficial enquiries with reference to certain specific periods but they are of a heterogeneous character and too old and tentative for any clear-cut inferences. The most carefully worked out among these was Dr. V.K.R.V. Rao's estimate which placed the net income of British India in 1931-32 between Rs. 1600 and Rs. 1800 crores and estimated a per capita income of Rs. 65 with a margin of error of plus or minus 6 per cent.

The war-time and the post-war stresses and strains on the economies of the under-developed countries generated a feeling for a more positive approach to their economic problems and the role of the national income and related statistics in the preparation and formulation of economic policies came to be recognised more and more. Imbued with this spirit some fresh studies of India's national income were undertaken. About the year 1949 the Ministry of Commerce and *The Eastern Economist* published their estimates almost simultaneously. The former estimated the total income of British India in 1945-46 at Rs. 6234 crores. For the Indian United Provinces a total income of Rs. 4931 and Rs. 5542 crores or a per capita income of Rs. 204 and Rs. 228 was estimated for the years 1945-46 and 1946-47 respectively. The latter enquiry covered an eleven-year period from 1939-40 to 1949-50 and its main results nearly coincided with the Commerce Ministry estimates. No less important in this connection was Mr. R. C. Desai's essay on consumer expenditure in India which put the per capita income of British Indian Provinces at Rs. 70.2 in 1938-39 and Rs. 73 in 1940-41. Late in 1950 came United Nations' *National and Per Capita Incomes of Seventy Countries, 1949*. In this list of countries India with a per capita

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

income of 57 dollars in 1949 ranked fifty-fifth. Compared to some other Asiatic countries like Siam, Indonesia and Pakistan she figured somewhat better but she had apparently much leeway to make considering United States' 1,453 dollars and Great Britain's 773 dollars.

1948-49 Estimates

It was against this setting that in the first week of May 1951 the first complete estimate of India's national income appeared in the *First Report of the National Income Committee*. The Committee have estimated the total income of the Indian Union in 1948-49 at Rs. 8710 crores and a per capita income of Rs. 255. The substance of the report is summarised in the following table :

Items	*Net output (Rs. crores)*	*Percentage to total*	*Number of persons engaged (lakhs)*	*Net output per engaged person (Rs.)*
1. Agriculture (including forests & fisheries)	4150	47.6	905	450
2. Mining & Factory Establishments ..	640	7.3	38	1700
3. Small Enterprises	860	9.9	149	600
4. Railways and Communications ..	230	2.6	12	1900
5. Banking, Insurance & other Commerce & Transport ..	1470	16.9	95	1500
6. Professions and Liberal Arts ..	320	3.7	50	600
7. Govt. Services (Administration)	460	5.3	36	1300
8. Domestic Service	150	1.7	42	400
9. House Property ..	450	5.2	—	—
Net output at factor cost	8730	100.2	1327	660
Net earned Income from abroad ..	—20	—0.2	—	—
National Income ..	8710	100.0	—	—

Thus nearly half of the national income accrues from agriculture and allied occupations, about a fifth from commerce, transport and communications, about a sixth from mining, factories and small enterprises and the remaining one-sixth from services and house-property. In the light of Dr. Rao's estimates it appears that the composition of the national income has not undergone any material change except for a small decline in the proportion of the income from agriculture and allied occupations and a slight increase in that of the income from commerce, banking and professions. The net output per engaged person is highest for railways and communications and factory establishments due to higher capital investmet in these spheres while agriculture, the nation's premier industry, ranks only second from the bottom. Government share in the generation of domestic product in 1948-49 amounted to Rs. 760 crores or 8.7 per cent and in national expenditure to Rs. 830 crores of 8.1 per cent. Government draft on private income amounted to Rs. 690 crores and gross capital formation on Government account to Rs. 210 crores. Exports and imports during the year valued Rs. 500 crores and Rs. 710 crores respectively. Net earnings from abroad being negative and donations from abroad Rs. 10 crores the deficit on current account was financed by net borrowings of the tune of Rs. 220 crores. Net national expenditure at market price is estimated at Rs. 9170 crores. One solitary figure about consumer expenditure indicating that 58 per cent or Rs. 4600 crores of the national product was spent on food is also given. In addition a frame-work for social accounts is presented for the first time but it is not of much use since symbols have been used for the missing items.

The methods employed have been, considering the circumstances, the least unsatisfactory but the gaps in information and data—which can be adequately filled only if there is a country-wide organisation to collect detailed information—have inevitably led to infirmities of an unknown magnitude. It is not possible to indicate the margin of error in the various estimates but they may be classified into some "reliability categories." Thus the estimates pertaining to mining and industry, Government Services, railways and communications and organised banking and insurance would pass on as "good estimates," those pertaining to agriculture and allied occupations as "rough estimates" and the remaining ones as "conjectures."

The findings of the National Income Committee have clarified many facts dimly realised before. They have borne out the slow rate of development in our economy, the 'shrunken' status of its secondary and tertiary sectors and the low productivity in the predominating primary factor. The Committee's estimate of the per capita income is higher than all previous estimates but in view of the rise in prices in recent years this does not reflect any more prosperity and the real income calculated by assuming constant prices for the net product would be scarcely different from pre-war standards. The Economic Adviser's Index Number of General Prices with the year ended August 1939 as the base stood at 381 in 1949. This means that the purchasing power of Rs. 3.8 equalled that of Re. 1 before the war. Assuming a similar ratio between the Committee's valuation of the net product and its value in pre-war prices the pre-war equivalent of a per capita income of Rs. 255 estimated by the Committee works out to be Rs. 67 which comes very close to Dr. Rao's estimate of Rs. 65 in 1931-32.

However, on several, other important matters the Committee's report throws no light. Of course, information on subjects like capital formation and provisions for depreciation, consumer expenditure and allocation of income was hard to collect but with regard to matters like small -and -corporate savings and distribution of income some ground could be covered. The available post-office and banking statistics and income-tax statistics on the size of the incomes coupled with the estimates of productivity and the standard of living offer a promising field for analysis. Moreover, breakdowns as to the regional, inter-state and urban-rural variations in national income and productivity and also about the components of income accruing to various sectors are useful guides to policy-making and will have to be attempted at an early stage.

Book Reviews

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

EDITOR, *The Modern Review*.

ENGLISH

GANDHI AS A SOCIAL REVOLUTIONARY: *By Wilfred Wellock. Published by the author from 12 Victoria Avenue, Quinton, Birmingham, 32. 1950. Pp. 39. Price one shilling.*

In India, when we write about Gandhiji, we usually slip into a sentimental mood of adoration or of hostility. Perhaps we have been too near him to be able to escape powerful emotional influences.

It is therefore refreshing to turn to an essay of the kind which Mr. Wellock presents here. He came to India as a delegate to the World Pacifist Meeting in 1949, and was also elected as Chairman of its Committee on Basic Education and World Peace. The findings of that Committee as well as the impressions gathered at the conference and in course of visits to centres of constructive work during the following months are presented in this pamphlet.

Mr. Wellock has expressed the opinion that the root cause of the sorrows of the world lies in an idolatrous worship of material comforts to the exclusion of the higher values of life. Even Communism has not escaped infection from this vicious product of the Industrial Revolution. He feels that if man is to be rescued from the impending threat of self-annihilation, Gandhism offers a supremely practical way. It will have to begin with a re-ordering of life in the personal sphere in accordance with non-violence, but very soon, the influence will spread to the social field; where obstructions to the creation of a new life shall have to be met by the supremely moral method of Satyagraha. Of course, the execution of the programme will vary from place to place, but unless the world accepts the fundamental values for which Gandhism stands, and which it shares in common with Christianity, there is hardly any hope left for mankind.

We do hope, the pamphlet, although small in size, will set men thinking earnestly not only in the West but also in India, where his influence is fast being lost by default. Perhaps we may remind that, as early as 1925, Gandhi wrote with perhaps a tinge of sorrow that in regard to non-violence, 'what seems to me to be so natural and feasible in India, may take longer to permeate the inert Indian masses than the active European masses' (*Young India*, 3-9-25, p. 304). The fact that Gandhism is gaining a more intelligent appreciation in the West, and more an emotional worship in the land of its origin may be a confirmation of Gandhiji's fears.

GLEANINGS GATHERED AT BAPU'S FEET: *By Mira. Pp. 26. Price six annas.*

SELECTED LETTERS (First Series): *By M. K. Gandhi. Published by Navajivan Publishing House, Ahmedabad. Pp. 56. Price seven annas.*

These two pamphlets throw an intimate light on Gandhiji's character and his relation with co-workers. They will be valuable for any life of Gandhiji.

SATYAGRAHA IN SOUTH AFRICA: *By M. K. Gandhi. Revised Second Edition 1950. Ahmedabad: Published by Navajivan Publishing House. Pp. xv + 351. Price Rs. 4.*

The Navajivan Trust must be thanked for having brought out a new edition of this classic in Gandhian literature.

NIRMAL KUMAR BOSE

MY PHILOSOPHY AND OTHER ESSAYS ON THE MORAL AND POLITICAL PROBLEMS OF OUR TIME: *By Benedetto Croce. Selected by R. Klibansky. Translated by E. F. Carritt. George Allen and Unwin Ltd., London. 1949. Price 15s. net.*

Croce's writings have been much appreciated and equally criticised. In all his writings, political and philosophical, in his discourses on morals and in his other essays he has always placed emphasis on the individual. "The man has a real life to live; the life of classes is a fiction." It is needless to point out that emphasis on the individual does not mean encouragement of selfishness. His views on liberty coincide to some extent with those of Einstein on freedom. He also pleads for humanism but unlike Einstein he sought to justify his views on metaphysical grounds. He, therefore, could not approach the masses as Einstein did. It is not possible, neither is it necessary, to discuss in details his political views. That has been elaborately done before by professed philosophers and others. He himself has violently criticised 'dialectic materialism,' and protests against his being described as a Hegelian. In the essays on the problems of Ethics and Aesthetics he has boldly challenged the so-called theory of 'pure art.' "Though art is neither the slave nor the handmaid of morality or philosophy, it is always busied with both, for its business is that of the spiritual unity which in it comes to its own as a necessary and unique manifestation."

The collection of the essays is a timely publication. The Moral "Problem of our (his) Time" is still the moral problem of our time and the essay can be read with profit. It does not appear to the reader that he is reading a translation. Carritt, himself a noted writer on Aesthetics, has accomplished his task admirably.

S. C. MITRA

FOUR CHAPTERS: *By Rabindranath Tagore. Visva-Bharati, 2 College Square, Calcutta. Price Rs. 3-8.*

Char Adhyay, when the original Bengali first came out in 1934, created a sensation. The then Press Officer

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of the Bengal Government wanted to use it as a propaganda against popular anarchist movements. The situation now has completely changed and we can enjoy the book as a pure product of art. The translation was very ably done by the Poet's nephew, the late Surendranath Tagore and was serially published in the pages of the American magazine *Asia* in 1936-37. We are glad to get it now in a handy book form.

SHEAVES: *Poems and Songs by Rabindranath Tagore. Selected and translated by Nagendranath Gupta. Published by Hind Kitabs Ltd., Bombay. Price Rs. 4-12.*

This is a reprint of the first edition and is neatly printed. We reviewed the first edition in our pages long ago, when we wrote: "Mr. Nagendranath Gupta has earned the best thanks of the lovers of Rabindranath in India and abroad for his excellent translations of the great poet's songs and lyrics....Taking the poet's own matchless renderings as a standard, Mr. Gupta's achievement does not fall far short of it and there are occasions when the translation rises to the beauty and dignity of the original, as we find in his *Urvasi*." Going through the preface and the translation we can again recommend the book to the English-knowing lovers of Rabindranath's poetry.

B. N. B.

RUSSIAN IMPERIALISM—HOW TO STOP IT: *By R. Swarup. Read and approved by Sri Aurobindo. Published by Prachi Prakashan, 38, Netaji Subhas Road, Calcutta 1. Pp. 56. Price Rs. 2.*

This small book is an attempt to prick the pretension of the Soviet Union's claim that it is the upholder of peace in a world over which war-mongers and their dupes roam about. This is good work, but the experiences of the publishers with the conduct of Calcutta Presses, specifically named in their Note, demonstrate how the "vague fear of trouble" has paralysed even the professed enemies of the Soviet Union.

The key-note of the book is to be found in the philosophy of blood and iron, the use of force, which Marx had preached and which his followers have been practising. The writer should have brought these out more elaborately. And their "patriotic betrayal" of their own people should have been exposed. He does the next best thing when he quoted the Stalin thesis that "the existence of the Soviet Republic side by side with the imperialist States for a long time is unthinkable.....a series of most terrible collisions between the Soviet Republic and the bourgeoise State is (?) inevitable." From this follows the Soviet technique of expansion and disruption. This will require volumes to describe. We expect the publishers to do this needed work to remove the "moral indifference" to this evil to which they refer in their Note.

The price of the book is rather high.

SURESH CHANDRA DEB

SANKARADEVA: (A Study): *By Hara Mohan Das, B.A., L.T. Published by the author from Gauhati, Assam. Pp. 145. Price Rs. 2.*

In order to satisfy my heart's desire for studying the great lives of medieval Indian saints I had written last year to a brother monk in Shillong to send me an English book on Sankaradeva, the patron Saint of Assam. The Swami kindly sent me a copy of the very book which is under review. The learned author of this book, who is a retired member of the Assam School service and has about a dozen volumes to his credit on various subjects, makes in this work a short survey of the life, teachings and writings of Sankaradeva, a senior contemporary of Sri Chaitanya of Bengal. Like Sri Chaitanya in Bengal, Sankaradeva brought about a Bhakti revival in Assam and left his indelible impress on the art, literature and religion of the province. He was born in 1449 A.D. in Alipukhuri in the district of Nowgong and passed away in 1568 A.D. at Kakatkuta in Cooch Bihar. His father Kusumbara Bhuyian was the chief of the famous Bara Bhuyians of Assam and became powerful in the reign of king Viswa Singha. Sankaradeva married twice like Sri Chaitanya and preached Neo-Vaisanavism. Though these two Vaisanava reformers were contemporaries and appeared in adjacent provinces they never met. This view is also supported by Dr. Biman Bihari Majumdar in his monumental Bengali work on the biographical materials of Sri Chaitanya. The Neo-Vaisnavism preached by Sankaradeva is akin to Visistadvaitavada or Qualified Monism of Sri Ramanuja. It does not entertain the worship of a divine couple like Sita and Rama or Radha and Krishna. But it adores Sri Krishna alone as the supreme being and the primal cause of the Universe. It abhors animal sacrifice, idolatry and pseudo-esoteric rites, and upholds *dasyabhakti* as practised by Hanuman to Sri Ramachandra. In the temples of prayer founded by Sankaradeva no image but a sacred book especially the Bhagavata Purana is placed on a pedestal and worshipped like the Grantha Saheb in the Sikh temples. The ideal devotee according to Sankaradeva is Uddhava. The centres of religious activities established by Sankaradeva and his apostles are called Satras and the religion preached by him is known as Bhagavata Dharma or Mahapurusiya Dharma. The writings of Sankaradeva are numerous and consist of original compositions and translations from Sanskrit scriptures, mostly Puranas. Most of his writings in verse are in old Kamarupi language and form the foundations of the Assamese literature. In his literary activities he was greatly assisted by his eminent disciple Madhavadeva. His main poetical works are the Uddhava Sambad, Kirtan, the Bhagavata Purana, Guna-mala, Ramayana, etc. His twenty works and those of his apostles are the popular sacred books of the province.

The handy volume under review adorned with three important illustrations is an excellent introduction to the biography, philosophy and literature of Sankaradeva and the mighty movement started by him. It is indispensable to the students of Indian religion and deserves to be rendered into provincial languages for wider circulation. It is a pity that Sankaradeva is not well known even in the adjacent province of Bengal or Bihar for want of such books.

SWAMI JAGADISWARANANDA

PROBLEMS OF EDUCATIONAL RECONSTRUCTION: *By K. G. Saiyidain, Educational Adviser to the Government of Bombay. Published by Asia Publishing House, 17, Gunbow Street, Bombay 1. First Edition—1950. Pages 366. Price: Library Edition Rs. 7, Students' Edition Rs. 4-12.*

Reconstruction of education has for some time past been stirring the minds of the Indians and reforms are being effected in some branches of the educational system. But these piecemeal reforms in the nature of patchworks on a rotten piece of linen cannot be expected to produce desired results unless education is viewed in a wider perspective and educational institutions are considered as an integral part of socio-economic and political structure of the community. The learned author of this book who has had a varied experience as a teacher, an administrator and a keen observer of educational machinery in some Western countries has been in intimate touch with the pedagogical and administrative sides of Indian education. He has rightly conceived that 'the school is an integral part of the total social environment and the child's individuality is not nurtured in school only but is greatly influenced by our socio-economic system and by con-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

temporary ideological currents.' Education cannot be dissociated from life and the future citizens cannot be reared up in glass-houses amidst artificial environments.

The book consists of three parts under captions: (1) Building the School of the Future, (2) New Trends and Approaches and (3) The Education of Teachers, written in a perspicuous style and permeated throughout with boldness of ideals, awareness of modern trends in human values and inspired by the sincere zeal of an educator. The book is a class by itself. It provides much food for thought for drawers of educational schemes, for teachers who are to vitalize the schemes and for enlightened members of the public all of whom have to work in perfect harmony with each other for proper solution of the 'problems.' It will be a profitable and delightful study for lovers of education.

NARAYAN C. CHANDA

ROADS FOR INDIA : *By T. R. S. Kynnersley. Being the second in the series entitled "Tata Studies in Current Affairs." Published for Tata Sons Limited by Padma Publications Ltd., Bombay. Illustrations by A. R. Acott. Price Re. 1.*

Communications in India are still far from being satisfactory. In the matter of roads the country very urgently needs an "efficient network of roads, particularly in rural areas." This fact was brought to light during the Bengal Famine of 1943-44 when food could hardly be properly distributed all over the province within the shortest possible time. It is unfortunate that till to-day the situation has not improved very much.

Mr. Kynnersley, who has been a well-known road-engineer and was for some time the President of the Indian Roads and Transport Development Association, begins his brochure with defining "What is a road?" and closes the discussion with suggestions as to how an all-India Transport Board can solve our problem of roads.

The booklet is profusely illustrated with sketches and photographs that go to make its reading interesting and engaging as well.

SANTOSH KUMAR CHATTERJEE

CEYLON KICKS INDIA : *By J. S. Bright. Published by the Knowledge Emporium Publication, New Delhi. Price Rs. 4-4.*

If a catchy caption, a smart get-up and fine printing make a good book, J. S. Bright's *Ceylon Kicks India* is one. But if the quality of the reading matter is the criterion, it is not.

More than 400,000 of our nationals are scattered all over the world. They have played an important part in the development of many of the countries where they have gone. Yet as luck would have it, they are unwanted and treated as such in almost all these countries. Malan's South Africa, Thakin Nu's Burma, Senanayake's Ceylon, to name a few, all sail in the same bark. It was hoped in pre-independence days that Free India's nationals abroad would be shown the courtesy and consideration they deserve. The hope remains unrealised. On the contrary, the position of Indians in many cases has steadily deteriorated since independence.

Tiny Ceylon, which owes so much to India, has placed her 800,000 Indian population in an unenviable position by passing the Indian Citizenship Act which disfranchises Indians who have lived in the country for several generations, by making it difficult to remit money to India, by denying banking facilities to Indians, by attempting to Ceylonise trade and industry overnight and by introducing other discriminatory measures against Indians. Colombo hotels are unwilling to accommodate Indian guests. Visitors from India are shadowed and heckled by the police. The Ceylonese Press systematically blocks out Indian news and carries on a regular campaign of scurrilous calumny against India.

Mr. Bright's book fails to give a clear and comprehensive picture of Indians in Ceylon. The book is scrappy. Use of expressions such as "the mad rulers of Ceylon.....embellished with Ravana's donkey-head," "the frogs of Colombo" and the like are in bad literary taste. Mistakes—factual and linguistic—tip the scales definitely against the book under review.

SUDHANSU BIMAL MUKHERJI

BENGALI

PURANA-PRAVESA : *By Dr. Girindra Sekhar Basu. Published by Bangiya Sahitya Parishad, Calcutta. 1358 B.S. Pp. 306. Price Rs. 6.*

It is with genuine satisfaction that we welcome the appearance of this revised edition of a work which, we think, is one of the most important contributions made in recent years to the study of the historical material in the *Puranas*, and which involves in particular the first attempt to introduce order and consistency into the tangled maze of Puranic chronology. In the preliminary chapters the author deals with such important topics as the age, authenticity and methodology of the *Puranas*. These points are dealt with more fully in the concluding chapters. The most valuable part of this work, however, is concerned with the exposition, as original as it is profound, of the difficult and complicated Puranic chronological scheme. Here the author explains with remarkable care and thoroughness the different methods of time-reckoning in the *Puranas* such as the cycles (*yuga*) of different kinds ('divine,' 'ancestral' and 'human'), Manu-cycles (*manvantara* of 71 *yugas* or 355 years each), and Kalpa-cycles (of 14 Manu-cycles each). In so far as the ancient dynastic lists are concerned, the Puranic chronological scheme consists, as the author shows (pp. 31*f* and chart p. 195), by a brilliant combination of direct evidence and of inference, of a direct Kalpa-cycle of 5,000 years starting from Svayambhuva Manu. Into this is fitted the division into 14 Manu-cycles, since the time-reckonings from Svayambhuva to Vaivasvata in the first instance are made in these works in terms of *manvantaras*. As 5,000 years divided by 14 manvantaras of 355 years each would leave a margin of 30 years to be accounted for, the *Purana* authors postulated 15 junction-periods (*sandhi*) one at the beginning, one at the end and thirteen in the middle with two years for each *sandhi*. Accordingly 355+2+2=359 years are assigned to Svayambhuva Manu and 355+2=357 years to each of the rest. Into the same chronological scheme the *Purana* authors fit four time-divisions (*krita, treta, dvapara* and *kali*) and 30 'ancestral' or historical *yugas*, since these are used for the later time-reckoning from Vaivasvata to Yudhisthira. The result is a somewhat complicated time-scale comprising 5000 years divided into (a) one 359 and thirteen 357 time-periods (*manvontara*), (b) four time-divisions (*krita, treta, dvapara* and *kali*) in the proportion of 4:3:2:1, and (c) 30 time-divisions (ancestral *yugas*) of 2000 months or 166⅔ years each. Following a sound method of reasoning, the author further shows (p. 45*f*) how the independent statements in the *Puranas* about the chronological positions of a number of sages and kings wonderfully support the above scheme of chronology. Another and equally scientific method of testing the above scheme used by the author in this context is the probability or otherwise of average generation- and reign-periods deducible from the data from a known series

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of generations as well as of royal reigns, the author concludes that (*a*) the only safe basis of calculation of the average is the age at which the first child is born, (*b*) for a long series of generations in lineal succession the average duration is about 28 years, and (*c*) that where the royal succession is uninterrupted from father to son, the average reign-period approximates to this figure, but it is likely to be less when the succession is broken. Arguing from these premises the author maintains against Vincent Smith and Pargiter that (*a*) there is nothing incredible in the Puranic averages of reign-periods of the ancient kings and (*b*) it is wrong to apply a hypothetical average to their reigns. The author drives his conclusions home by showing that the average reign-period of English sovereigns from John to Edward III (35.6 years) is almost the same as the corresponding Puranic figures for the Saisunaka kings (33.2 years). It is not without interest to observe that the figure for the average duration of a generation in a long series given above, (viz., 28 years) was arrived at independently by another Indian scholar of recent times (Dr. S. N. Pradhan in *Chronology of Ancient India*, pp. 174-75).

With the relative chronology of ancient kings thus placed on a secure basis, the author turns next to the chronology of recent (the so-called 'future') dynasties down to the Andhras. With characteristic thoroughness the author sums up the Puranic data for fixing the chronology of the recent kings under five heads. Two of these comprise the methods of time-reckoning in terms of regnal years and of the Saptarshi cycle of 1000 years. To another category belongs the Puranic statement about the chronological interval separating Nanda's accession on the one hand from the accession of Parikshit (1015 years) and on the other hand from the end of the Andhra dynasty (436 years). From this the author quite plausibly argues in favour of an era starting from Nanda's accession (p. 88). As to the exact chronology of Nanda the author, by a brilliant hypothesis, conjectures (pp. 88-89) that (Mahapadma) Nanda, though living in the second *krita*-cycle according to the ancient Puranic reckoning, was held by later authors because of his Sudra birth and his extermination of Kshatriyas to have really belonged to a prolongation of the Kali-cycle. As the Nanda era was thus taken to be synonymous with the era of the Kali age, the *Purana* authors were led to push back the beginning of the creation-cycle by 2,700 years (the traditional antecedent period of 27 *yugas* reckoned according to the newly-accepted Saptarshi-cycle). Still later this initial date was taken to mark the beginning of the Kali age. Relying on these data the author has no difficulty in tracing the exact date of Nanda's accession by counting backwards from a fixed recent reckoning, say 1934 A.D.=5035 Kali era. The date would thus be 5035-2700-1934=401 B.C.

The results of these studies are summarised in a very valuable series of chronological and synchronistic tables (p. 96 *f.*). The author begins with the genealogy of the Ikshvakus, the longest and the most complete of royal genealogies in the *Puranas*. The list comprises 127 names arranged in order of generations from Vaivasvata Manu downwards. By calculating the average figure for each generation and by checking this up with other Puranic data, the author assigns dates in the Christian era to the whole series of kings of this dynasty. This is followed up by similar tables relating to the dynasties of the Purus and the Barhadrathas as well as those of the later dynasties (*viz.*, of Pradyota, Sisunaka, Nanda, Maurya, Sunga, Kanva and Andhra). Finally, we have a number of synchro-

nistic tables of ancient as well as recent dynasties.

We propose to make a few remarks.

Pp. 3-5 and 154 *f*: *Composition and Historical Value of the Puranas*. The author thinks that the connotation of *Purana* as indicated by the well-known category of its five characteristics (*panchalakshana*) is just the same as that of history in the modern sense of the term. The addition of other features in the later works of this class so as to make them a complex of ten categories, he says, adds to their historical value. This importance, the author thinks, is not impaired by the language or even the slightly conflicting accounts and readings in the *Puranas*. The evidence of inscriptions, coins and monuments, he further observes, is incomplete, while by contrast the authenticity of the *Puranas* is proved by the internal evidence and is in agreement with the external evidence. With this last claim we shall have to deal presently. But meanwhile it is permissible to point out that modern history is something more than a "historical and geographical account together with the description of the manners, customs, traditions, governments, arts and sciences of the people." It further involves a careful sifting of the evidence, analysis of human motives and characters, and especially and above all, reconstruction of the past culture and civilisation with the aid of historical imagination. Again, though the earlier *Puranas* known to the Vedic literature doubtless contained legends of origin, there is nothing to show that they had any of the other characteristics indicated by the category of *panchalakshana* (Cf. *Beginnings of Indian Historiography*, etc., by the present writer, pp. 18-21). The author thinks that the *Puranas* had their original source in the truthful accounts of the *sutas* who, in their turn, drew their material from the *magadhas* ("State historians"). But in the Vedic age, *magadha* is not a professional title at all, while the functions of *sutas* are unknown except in so far as they are characterised as *arajano rajakritah* in two Brahmana texts and made to function in the rituals of the *Rajasuya* and the *Asvamedha* (see references in *Hindu Public Life*, Part I, by the present writer, pp. 104-6). Even in the later Epic and Puranic tradition, the *sutas* and *magadhas* are some times identified with each other (References in Pargiter, *Ancient Indian Historical Tradition*, p. 17).

Chronology of Royal Dynasties: No praise is too high for the industry, ingenuity and the scientific thoroughness with which the author has tried to build up his great chronological tables relating to the Puranic dynasties. And yet there are very serious difficulties in the way of acceptance of his conclusions. Thus, how are we to reconcile his account with the well-attested early Buddhist tradition making out Suddhodana, and Prasenajit to have belonged to parallel dynasties and not to a single Ikshvaku line, as also with the evidence of the Sinhalese chronicles testifying to two successive dynasties (those of Bimbisara and Susunaga) instead of one single Magadha "Sisunaka" ruling house? Equally difficult it is to understand how Sakya, Suddhodana, Rahula and Prasenajit are to be regarded with the Puranas as kings of Kosala in this order of lineal succession. Again, while the Pradyotas and the Andhras, according to the author, were ruling dynasties of Magadha in two successive periods. they are shown by authentic evidence to have belonged to Avanti and the Deccan respectively. In so far as chronology is concerned, the author's dating of Pradyota (871 B.C.) Bimbisara (612 B.C.) and Prasenajit (753 B.C.) as conflict with the early Buddhist tradition shows them to have been contemporaries. In the same way the author's dates for Gautamiputra (340-361 A.D.) and (Vasisthiputra) Pulumayi (361-389 A.D.) are in conflict with the epigraphic or numismatic evidence both which makes out the former to have been the conqueror of the Kshaharata Nahapana (119-24 A.D. according to most scholars) and the latter to have been the son-in-law of Rudradaman (c. 150 A.D.).

Though we have far exceeded the limits of space in this Review, we cannot conclude without a word of praise for the high degree of scholarship shown by the author in this volume of which the value is enhanced by a complete analytical table of contents and a good Index.

U. N. GHOSHAL

RAMMOHUN-GRANTHABALI (Brahman Sebadhi, Padri-Sisya Sambad): *Edited by Brajendranath Banerjee and Sajanikanta Das. Bangiya Sahitya Parishad, 243-1 Upper Circular Road, Calcutta 6. Price Re. 1.*

This is the third part of Raja Rammohun Roy's works to be completed in seven volumes. The works are carefully edited. Books published, as far as available, in Rammohun's life-time have been consulted. It is to be noted that the works are characterised by the publication also of those writings in answer to which Rammohun's books or pamphlets were often written, so that the reader may follow the controversies in all their aspects.

SAILENDRAKRISHNA LAW

GUJARATI

RANCHHODLAL ANE BIJAN NATAKO: *By Yashodhar Narmadashankar Mehta, Bar-at-Law. Published by the Gujarat Sahitya Sabha, Ahmedabad, 1948. Thick cardboard. Pp. 136. Price Rs. 2-8.*

The writer of these plays is the son of a father, Dewan Bahadur Narmadashankar Mehta, who was a noted writer and thinker and was possessed of high literary qualities. The first of these plays *Ranchhodlal*, has secured a prize of Rs. 500 in a competitive presentation by the All-India Radio and a Gold Medal from a well-known literary magazine. It depicts the life and prominent incidents in the life of the maker of modern Ahmedabad, in more senses than one, i.e., by the foundation of Cotton Mills, Weaving and Spinning, by cleansing the city of unhealthy and unhygienic elements, as its Municipal Head. Amongst the city's three makers, Ahmedshah, Ranchhodlal and Gandhiji, Ranchhodlal holds the middle place. The author has woven romance round his life, by making him the political heir of Ahmedshah, who founded Ahmedabad. The other four plays, (1) *The Traveller from Denmark*, (2) *Bernier*, (3) *Sidi Ali* and (4) *Hiuen Sang*, have a historical background, and depict certain aspects of India's history and philosophy in a highly artistic manner. The one relating to the famous Chinese traveller is very human, and shows him at his best. A scholarly Introduction by Dewan Bahadur Prof. B. K. Thakore, adds to the value of the book. We are sure that Mr. Yashodhar will not rest on his oars but continue his valuable literary work.

INDIAN PERIODICALS

Freedom and Culture

Dr. K. R. Srinivasa Iyengar writes in the *Aryan Path*:

The time is now indeed out of joint, and what is needed to set it right is sense and sincerity and not mere scholarship and debating skill. Is civilization dying? Has humanity become powerless to give the right response to the challenge of the hour? Culture is one side of the sum of human achievement; civilization is the other. These words are often loosely used; it will be convenient here to restrict "civilization" to the glittering material aspects of human achievement and "culture" to its intellectual, moral, æsthetic and spiritual aspects. The "glory" that was Greece: the "grandeur" that was Rome—here we have the two in vivid contrast.

Of course, from matter to spirit is after all a single gamut. To use another metaphor, invisible arteries link the two and when the circulation is impeded serious consequences are inevitable. Modern civilization is an imposing facade, but our splendorous humanistic culture is its life, its soul. Are the fountains of this life slowly drying up? Is the life-giving spark being extinguished? We anxiously ask these questions, and are half-afraid to answer them.

The malady of our times is the failure of the conscience of mankind to keep in effective check the powers for destruction which the phenomenal scientific and technological advances of recent decades have unleashed.

Civilization is forging ahead; culture is limping behind.

The cords linking them threaten to snap, and the abyss yawns to devour them both. Material progress is ever faster outpacing moral regeneration, and our control over the outer world of Nature's processes is already far in excess of our control over the inner world of frenzy, fanaticism and unbridled lusts. Science is marching on with a deafening blare of trumpets, but the chords of authentic humanism are, alas, unheard, and attempts are not wanting to silence them altogether.

The scientific and technological revolution has doubtless achieved much. The landscape has been altered in many places almost beyond recognition. Our habits too have suffered a singular change. The abnormal has become normal, and artificiality has acquired an easy naturalness of its own. Horror and fascination now-a-days keep close company. How wonderful that one should be able to fly like the birds of the air—indeed, faster, faster—and how amazing that one could hear the music and news of the world from one's snug room in an obscure village! The marvels of modern medicine and surgery need no recapitulation. Civilization is a going concern; yet we know all the time that horror lurks just round the corner. Large-scale sabotage is easy; global destruction would be quick and the human material is cheap.

With the arts of life, the arts of death too have perfected themselves.

How has this Death-in-Life phenomenon come to be? Why are we gripped by the fear of darkness at the very moment of the noon-bright glory of the sun? May it be because the whole current of civilization is canalized along wrong lines? Is not *waste* the key-word of the atomic age? Is not industry pampering the weak, the vicious, the vainglorious? Are we not living on the capital accumulated by the earth in the course of ages? Are we not suicidally using up coal, oil and the mineral and forest wealth with no thought for the morrow? Are we not even criminally wasting our resources, producing either vain toys or instruments of destruction? Improvident, pugnacious, intoxicated with a false sense of power and security, mankind would appear to be racing down the steep path to Annihilation.

The technological revolution, if it is not to prove a Frankenstein consuming its creator, has to be followed by another, a revolution in the mind and soul of man. Reason should return to our life-ways, and our present notions about the "standard" of living should give place to healthy ideas regarding the meaning and method of life. We need not, of course, like the Erewhonians, repudiate science and its achievements altogether; but the real benefits of science can be rationally distributed, wastefulness eschewed and the emphasis laid everywhere on life rather than on death.

Civilization can be saved if man can be saved.

And man can save himself by undergoing a spiritual revolution and releasing its energies for the remaking of the world.

Food, clothing, a roof over our heads, order and good behaviour—these we need, no doubt; but no less do we need beauty and love, right aspiration and golden hours of enchantment and of ecstasy. Music and the dance, poetry and the drama, philosophy and religion, sport and healthy disputation, these are the roses of life, finely scented, beautifully tinted. Life is for living; and for man life is for living well, fruitfully, purposefully. To give the individual freedom to create values is to ensure the conditions under which the Good Life can achieve a natural and full efflorescence. To strait-jacket the individual is to seal up the fountains of the spirit.

Liberty and freedom, like civilization and culture, are terms often loosely used, but here again it would be wise to differentiate between intellectual and spiritual freedom on the one hand and political and economic liberty on the other. A nation may have gained political liberty and may have achieved independence in the economic sphere; and yet, as in Russia today, the people may enjoy little freedom in the personal, spiritual sense. Freedom is the source of all good, and, where freedom is valued and exercised, political slavery and economic inequality cannot long prevail. On the other hand, mere national independence without individual freedom is sure at last to bring about an armour-plated, police-run, totalitarian state sans light, sans hope, sans all that makes life worth living.

Today governments of whatever description—some with greater success, others with less, some aggressively, others apologetically—are trying to secure and exercise wide powers. This is, of course, especially true of the Soviet Leviathan today, as it was terribly true of Nazi Germany and of Mussolini's Italy. But, indeed, it is difficult for

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

any modern state to resist the temptation to play Leviathan, with or without disguise. Planning and controls are the order of the day. Men are to be rendered wise and moral and studious and temperate through legislation and bureaucratic omniscience.

The individual and society—are basic; the state is but an offshoot, properly a helper and a servant, not a tyrannical master.

"The end of the state's compulsion," says Lord Lindsay, "is to give room for the kind of freedom and liberty which are possible only in social life." A state has the broad duty to ensure that law and order are maintained, and that goods are produced adequatley and distributed equitably. But the hierarchies of power and labour need to be reared on the foundations of justice and good-fellowship.

Again and again, when night has seemed unending, when the career of Evil Triumphant has seemed incapable of arrest, when the human race's power of revival seemed near extinction, great individuals—poets, mystics, philosophers, apostles, messiahs—have arisen, felt the failing pulse of civilization, withdrawn for a while into themselves to discover the key to regeneration, and, presently returning to the world, have taught the way to a new life of hope and aspiration and fresh achievement.

Bergson refers to those "privileged souls who have felt themselves related to all souls and....have addressed themselves to humanity in general in an *elan* of love. The apparition of each of these souls has been like the creation of a new species composed of one unique individual."

These privileged souls are the salt of the earth, and no human agency can foretell where or when they will make their appearance. Poetry and music, philosophy and prophecy cannot be made to order. A Christ, a Buddha, a Sankara, an Aurobindo, cannot be discovered by Public Service Commissions, and Working Parties cannot concoct the *Agamemnon* or *Sakuntala*, or *Hamlet*.

The bureaucrat may be efficient in his way, but the heights are not for him, he cannot see or reach them and it is but natural that in his blindness he should deny their very existence.

Christ said: "Render unto Cæsar the things which are Cæsar's, and to God the things that are God's." This exhortation is pertinent in the present context. The average politician's pretensions are boundless, and the politician in power is only too ready to demand both the things which are Cæsar's and those that are God's. Monopolist tyranny—as in the totalitarian countries—however it may have come into existence, soon degenerates into a monopoly of wrong, greed, cruelty and oppression. Both ends and means suffer a violent twist. Education becomes a means of perverting the human personality. Culture becomes a Department of State. The arts are mass-produced, and genius is regimented. The nightmare of Death-in-Life commences in dead earnest.

Lest such a fate overtake mankind—and this is by no means a chimerical fear—we shall do well to watch the portents and firmly refuse to acquiesce in the suppression of intellectual and spiritual freedom. The individual holds the key to our future destiny. He has carried the torch of culture down the ages, and in his hands it still burns with a steady glow. Nay, more, by achieving, in the fullness of time, individual transformation, he may open wide the doors of Possibility to the race as a whole. "The creative personality," says Toynbee, "is impelled to transfigure his fellow-men into fellow creators by recreating them in his own image."

The Ideal of Liberty

Prabuddha Bharata writes editorially :

Every individual facing life is gifted with certain powers of body and mind. It is of vital importance to himself and the community that he be given full facility to develop his powers and to advance towards a consummation which he considers to be the goal of life. Freedom is not an end in itself but a means to an end. Man wants freedom to act, think, and express himself in order to achieve something he considers necessary and valuable for his progress which he undoubtedly desires. When man is under subjection he suffers materially, morally, and spiritually. Liberty rightly conceived and expressed in the individual's life makes for the security and happiness of all. Armies may fail, governments may collapse, but the Eternal Spirit of Freedom inherent in man's soul is unassailable. To the man who has attained to that state of supreme spiritual freedom where no honour or riches tempt him, where no success elates him and no failure depresses him, develops a spirit of equanimity, sagacity, and fearlessness which express the true ideal of liberty. 'He obtains self-rule' (*apnoti svarajyam*), (*Taittiriya Upanisad*, I. vi. 2).

In India we have the great heritage of the Sanatana Dharma which has given our national life its indomitable spiritual power and vitality. Dharma expresses the ideal of liberty, both for the individual citizen and the State, nay, it expresses much more. It suggests law, duty, righteousness, and religion. A truer understanding and practice of Dharma is the great need of the present day. That alone can set at naught the constant clash that is seen to occur between the sense of rights and privileges and the sense of duties and responsibilities. The *Bhagavad Gita*, the greatest epitome of liberty and freedom for Man says that it is better to pursue one's own duty, however imperfect, than to imitate another's, however perfect it may appear, lest there should be conflict and competition, consequently delaying the progress of all. Sri Krishna, who gave to humanity the greatest charter of liberty, says that the faithful performance of individual duty paves the way for the realization of the highest universal Dharma, which is the realization of complete freedom.

Oil Dilemma—Iranian Crisis

P. N. Kaul observes in *Careers and Courses* :

In order to understand the oil dispute, it is imperative one does not ignore the very history of Persia's Oil Industry. It was at the turn of the century, an Englishman named, William K. D'Arcy, who had made a fortune in Australia, got convinced that there was oil in the barren hills and plains of Iran. Accordingly, in 1901 he obtained a 50-year concession in return of $20,000 and a profit of 16 per cent, and formed a concern which later came to be known as Anglo-Iranian Oil Company. It was not until 1908, when, D'Arcy had nearly run out of money, that his company brought in the first gusher in the great oil-field of Masjid-i-Sulaiman. Last year's production of 35 556,000 tons of crude oil (all figures in net tons) was carried in 1718 miles of pipe-line to Abadan—the largest refinery in the world. In 1950 the output of the refinery was 27,000,000 tons. The Company owns 142 tankers plus 38 under construction, and markets the oil through its own distribution organisation. Anglo-Iranian Company holds a 23¼ per cent share in the Iraq Petroleum Company and a 50 per cent share in the Kuwait Oil Company —located below Iran on the Persian Gulf. The Anglo Iranian Company has refineries in Britain, France, Germany, Israel and Australia.

The Company's value is now variously estimated at $6,00,000,000 to $1,000 000,000. In 1932 the Iranians tried to cancel the concession, complaining that they were not receiving big enough royalties. In 1933 Iran gave the Oil Company another 60-year concession, under which it got a greatly increased and regular share of the profits. This share was further upped by 1949 supplementary agreement which Iran refused to ratify, although it has taken the first instalment of the $80 000,000 it would receive in 1951 under this new arrangement.

Iran with a population of 65 lakhs spread over an area of 6,28,000 square miles (1 lakh square miles being under A.I.O.C. control), like other Asian countries is a very backward country; only 5 per cent of so vast an area is under cultivation. Oil is the only main source of national income. It is estimated Iran possesses 85½ crore tons of oil of which three crore tons are produced every year, meaning thereby that the present oil wealth will last for thirty years. Another estimate puts it at 128,440 lakh barrels, out of which 2420 lakh barrels are produced every year, meaning thereby that the present stocks will go on till 53 years. The living standard of Iranians is disappointingly low. According to the findings of the United Nations the figures are :

Country	*Income per head in '49 in American Dollars*
1. Iran ..	85
2. Saudi Arabia ..	40
3. Iraq ..	85
4. Egypt and Syria ..	100
5. U.S.A. ..	1453
6. U.K. ..	773

NAKED EXPLOITATION

Iran presents yet another instance of imperialist's naked exploitation. Although the Anglo-Iranian Company

For Sensing, Feeling and Seeing the Pleasure—

DWARKIN & SON LTD
11, Esplanade East, CALCUTTA

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

has put forward the claim that they have, side by side, been trying their best to raise the living standard of Iranians and that in 1950, they spent 96.6 per cent of the total yield by way of customs, excise, royalties, capital expenditure, stores and materials, salaries, medical and public health, in Iran itself, yet the fact remains that the Iranians are the worst victims of their unabashed and criminal exploitation. It will not mean an exaggeration to say that the Company have from the very start tried to extract every drop of blood from Iran's national wealth. They have all along been aiming—and successfully too—to strengthen their hold on Iran. Accordingly, in 1914 Winston Churchill, as the First Lord of Admirality, started taking interest in the Company. In order that British Imperialism got its position deep-rooted in the Middle East, he advised the British Government to purchase as many shares of the Company as could achieve for her a dominating position. With the passing of years the production of oil also increased, thus adding to the profits of the share holders of the Company. In 1913, the Company produced 81 000 tons of the oil, in 1938, it went up to 1,000 000 tons and in 1950 to 30,000,000 tons. But the much exploited Iran got a nominal profit of 4 shillings per ton. For the past three years the Company earned a net profit of £1,42,000,000. It will be interesting to note that the Company have been paying many times more the income-tax to the British Government than the royalities paid to the Persian Government. This evident humiliating exploitation is aptly borne out by *Daily Compass*. "The cost of oil produced every year by the Britishers," writes the paper, "is hundred times more than Iran's present national income and ten thousand times more than the total income of Iranian labour." The most disappointing thing, in the words of the paper, is that "around the very oil fields of Iran live lakhs of naked, poverty-stricken, starving and diseased Iranian labourers." Only recently a member of the *Iranian Majlis* (Parliament) after his tour of Khuzistan which is directly under the jurisdiction of the Company revealed: "Not very long ago the population of Dashtistan—which is a part of the province—was 20,000 which is now reduced to 8 000. Owing to difficult living conditions the population of this part has come down to 50 per cent. Ninety five per cent of the population is suffering from eye diseases. Electricity, water taps, telephones are nowhere visible.....There is a network of Company's secret service agents and the poor Iranians have yet to know what freedom means."

Crux of the Problem

With this background it should not be difficult to determine the justification of Iran's decision to nationalize the Oil Industry. Of late, the British Government too have recognized the principle of Iran's right to nationalizing the Oil Industry. But the crux of the problem is: Has Iran the right to nationalize the oil plant together with the nationalization of the Industry? The British Government as also the A.I.O.C. hold that Iran has no right, whatsoever, to break the 1933 agreement unless the International Court of Justice permits her to do so. They also hold that under article 21 of the agreement, the Persian Government cannot cancel the agreement through any legislation of her own. On the other hand Persian Government hold that they have every right to nationalize the Industry. That is why she has outright rejected the decision of the Hague Court. Iranians also hold that 1933 agreement was, to some extent, the direct result of the pressure the British Government and A.I.O.C. brought upon them.

Whatever the legal position and whether it will be economically feasible, the nationalization of the A.I.O.C. is a foregone conclusion. Iran is adamant on her decision and knows full well that only through a military action can Britain make her retrace the step. And we know that Britain cannot afford any military action. If she does she will be provoking the Russians to cross into Iran according to Russo-Iranian agreement of 1921. Not only that, military intervention on the part of Britain, or any other country for that matter, means the beginning of world-wide conflagration, which will provoke all the Arab countries resulting in the total stoppage of oil production and supplies from Middle East.

The Solution

At the same time talking too much in terms of legal validity of the problem also will not deliver goods. This has clearly been demonstrated by Iran's outright rejection of the Hague Court's decision. This has incidentally, done an irrepairable loss to her authority. The only solution that presents itself to every sane thinking person is moderation and peaceful surrender on the part of the Britishers.

Even now it is not too late to make amends and offer such an agreement to the Iranians which would satisfy them, their economic conditions and over and above all, their national feelings and honour.

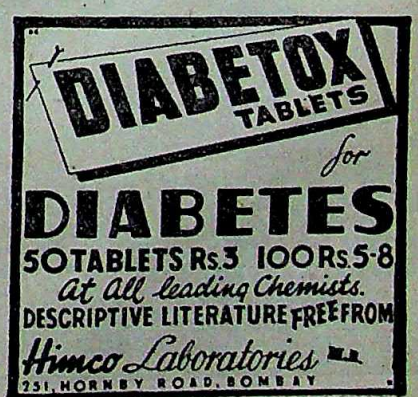
Men and Machines

The following is a summary of the opening address, as published in *Science and Culture*, by Sir Ben Lockspeiser, Secretary of the D.S.I.R., Great Britain, to the Ergonomics Research Society Symposium held on April 18, 1951 at the University of Birmingham :

We can no longer afford to leave the human operator to get along with his machine as best he can. Scientists want the help of the men and women who use machines, such as lathe operators, mill hands, lorry drivers, and aircraft pilots or signalmen, for there is an intimate connection between the machine and the person who uses it. The study of this relationship between man and his working environment is Ergonomics.

Take our machines from us and most of us would starve, whilst the rest would eke out an existence on a level of comfort and amenity that few would willingly accept. Civilisation, on its material side, is thus largely a matter of tools and machines. This dependence on machines has given man a large measure of dominance over his environment but not without cost. In mind and body he has been subjected to the stresses and strains deriving inevitably from the way he has chosen to live. These consequences were perhaps unforeseeable and were for a long time either unrecognised or dismissed as of little account. But we are becoming increasingly concerned with them, and very properly so, because there is so much lee-way to make up. Relatively speaking, we know so much about how machines work and so little about how the mind and body work. This is not surprising, for we design the machines ourselves, and they are more amenable to measurement in operation than are the characteristics and behaviour of human beings. Yet there is an intimate connection between the machine and the person who uses it. "The machines of the engineer are becoming more and more complicated, with a corresponding tendeney to become more difficult to control."

Gathered here we have scientists from a wide range of disciplines—anatomists, physiologists and psychologists from the biological field, together with engineers, physicists, architects and those interested in production and management. All have a common interest in the study and avoidance of those strains to which the human organism is exposed in mind and body in the environment created by the engineer.



It is one of the misfortunes of science that it becomes burdened with so much jargon.

Necessary though it may be for scientists to understand each other, it has the unfortunate effect of frightening the layman. This is always a pity, but the more so in our case because we want to enlist the help of large numbers of people who are not scientists. It would be much better off if more were known about the business of doing more work with less effort. These problems come within our everyday experience whether it is the design of a door-handle to make it easy to open, whether our hands are empty or full, or the marking of the dials on an electricity meter to make it easy to read and to reduce the number of mistakes made in reading it. I note that one of your distinguished Honorary members is Professor Le Gros Clark of Oxford University, and it may well be that if he looked into the ergonomics of rowing we might look forward to an Oxford Boat Race victory in the near future.

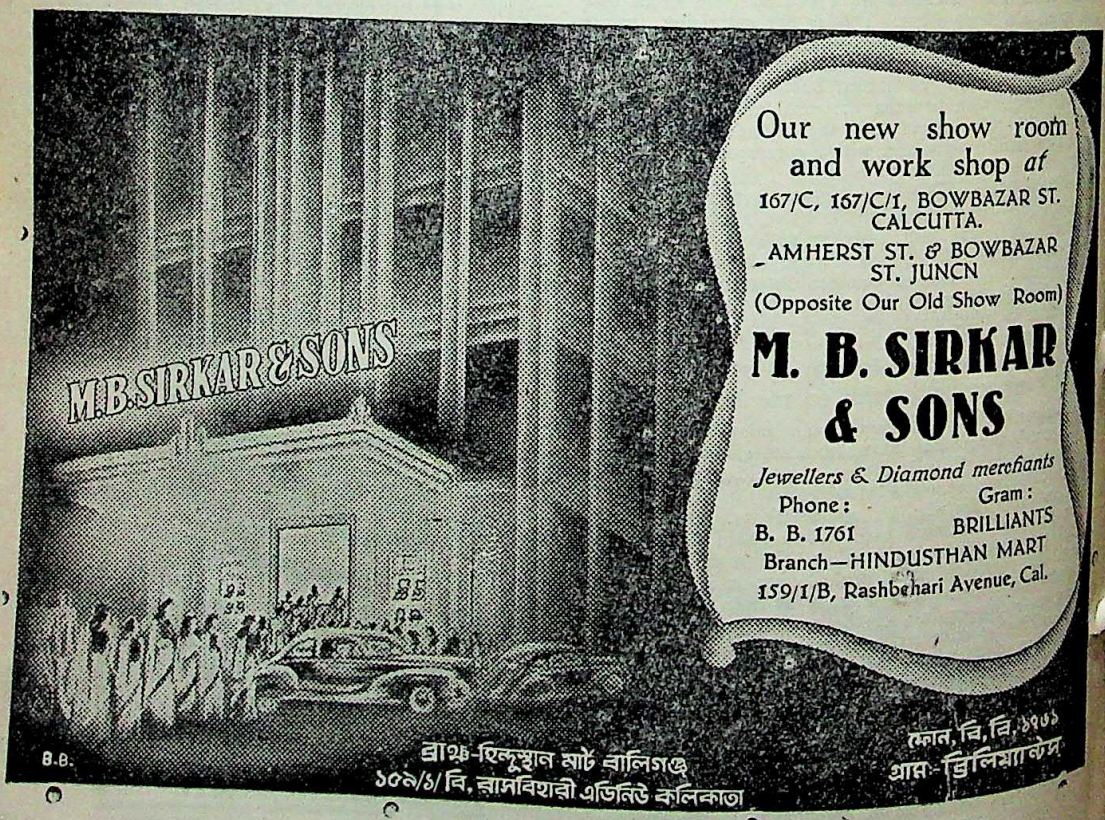
It would be a mistake, therefore, to give the impression that, by giving the name of ergonomics to the study of the relation between man and his work environment, a new science has been invented. Rather it is, that the approach to the practical problems in this field has, until quite recently, been largely of an empirical character. Of the many problems thrown up during the war by the Fighting Services, one with which I was personally in touch arose in the course of design of the gyrogunsight for aircraft. This was designed and developed by a small group of engineers at Farnborough, who between them met and overcame a range of problems, most of them purely mechanical. One, however, was particularly linked with the human characteristics of the person using the gunsight, and was a problem of stability. The designers found that if the aircraft suffered a sudden disturbance, such as a bump, which threw the gunsight graticule off the target, the bump also disturbed the person using the gunsight causing him to over-correct for the disturbance. This led to "hunting" and was overcome by arranging that if the gunsight were "thrown off" the target by a sudden movement, the graticule was moved through a third of the angle of the sudden movement, to follow the target. This solution was found by trial and error.

No doubt empiricism will be with us for some time yet, but the more basic knowledge we have at our disposal, that is to say, the more informed our empiricism, the better.

This is not to say, however, that progress in the design of machinery is haphazard or without proper direction. Indeed it is much to the credit of the design engineer that he has, in the past, achieved so much with so little guidance from the biologist and with so little basic training himself in human anatomy, physiology and psychology. This brings us to the heart of our problem. What are the criteria by which a successful machine design is to be judged? It would appear that the engineer in the past has tended to rely too much on measures of engineering efficiency expressed as a ratio of work output to input. This has led to too exclusive an attention being paid to the reduction of the physical effort necessary by the operative. It is too readily believed that any equipment which reduces the physical effort of the operative, inevitably increases output and reduces fatigue. But in these matters of human activity at work, regard must be had to the whole man and particularly to the integrated action of the sensorimotor system. The reduction of the load placed on the motor system (*i.e.*, the reduction of muscular effort) has very often involved an *increase* in the load imposed on the sensory side. The operative is required to pay increasing attention to dials, indicators and controls, to an extent that is liable to overload the sensory

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



side of the nervous system or call for excessively intricate co-ordination of sensory and motor functions. Such a state of affairs, quite as much as sheer muscular effort, induces what is commonly called fatigue—a condition of which there is little scientific understanding but which must clearly involve both psychological and psysiological components.

One type of approach, through time and motion study, and the layout and management of factories, is made with the object of making the best use of such machines as we have. Ergonomics looks farther. It seeks to influence machine design and, although our knowledge of the fundamental biological problems involved is far from complete, enough is known to justify the introduction of biological considerations as a distinctive contribution to machine design. It is not much use, however, to bring the biologist into the problem when machinery and equipment have reached the stages of production and use. At the best he can then only reach a compromise by suggesting minor alterations in layout or operational routine. At the worst he may recommend scrapping it and redesigning. Clearly, the time when his advice should be sought is at the earliest stages of preliminary design, prototyping and field trial, when, if necessary, radical changes of design are economically possible.

Although the original interest in the field of ergonomics arose chiefly in relation to Service needs the Ergonomics Research Society has been quick to realise its applications to the needs of civilian life.

There are obvious features in common between the task of the operator watching a wartime radar display for "breaks" in the trace and the task of the operative in a cotton spinning-shed watching for breaks in the thread. This emphasis is the more welcome because of the special concern which the Department of Scientific and Industrial Research holds for scientific research and its application to civilian ends, both through the Department's own Research Stations and through the Industrial Research Associations which come under the aegis of the Department. We have recently been reviewing the extent to which the Research Stations and Research Associations are at present concerned with research within the "human factor" field; and it has been interesting to see the degree to which some of the Research Stations and the Research Associations, in providing a scientific service for their respective industries have been led by the needs of the day into the "human factor" field. I have noted, too, that these interests are best developed in that section of the field which lies within the scope of ergonomics. Concluding, Sir Ben said : "I look forward to the Ergonomics Research Society playing, in the years to come, an important part in *industrial research aimed, primarily, at the comfort and well-being of people engaged in their daily work.*"

FOREIGN PERIODICALS

American Literature

The following article on American Literature written by Henry Seidal Canby, appearing in the *Saturday Review of Literature*, is reproduced from an issue of the United States Information Service "Feature" :

The literary history of the United States began when the first settler from abroad of sensitive mind paused in his adventure long enough to feel that he was under a different sky, breathing new air, and that a New World was all before him with only his strength and Providence for guides. With him began a new emphasis upon an old theme in literature, the theme of cutting loose and faring forth, renewed, under the powerful influence of a fresh continent for civilized man. It has provided, ever since those first days, a strong current in American native literature, whose other flow has come from a nostalgia for the rich culture of Europe which was left behind. Writers in the first three centuries of New World history were more often purveyors of this nostalgia than recorders of the new warmth of the American imagination kindling in novel scenes. They believed that their mission was to be importers and middle-men for America of this European culture. The first historians of American literature wrote of it as if they were describing English flowers and trees transplanted into a new environment. It was the approach of teachers, critics, and historians in general until the 1920's. From the academic point of view, American literature was simply a hoped-for extension of the great literature of the English-speaking peoples. A history of American literature exclusively in terms of democracy or the frontier is as false as is a history of American writing as a colonial extension. There is an inevitable blending of elements in American culture whether it be in a newspaper editorial or in a poem of Whitman's.

Obviously, American literature is a *transported* European culture, bringing with it the richness of its sources in the classic world, the Middle Ages, and the Renaissance. Its roots reach down into British literature which itself has absorbed so long and so much. Yet American literature is a *transformed* literary culture..... Slowly, yet inevitably, it has found its own accent, as has American speech. The divergence has been much greater than between American and British habits in the use of the English language, because literature is speech made expressive of values. The values, the expectations, the experience of life in America have been different from the beginning.

Whether we call it progress or change or development, increasing power and vitality are extraordinarily characteristic of the American 19th century. Never in history has nature been so rapidly and so extensively altered by the efforts of man in so brief a time. Never has conquest resulted in a more vigorous development of initiative, individualism, self-reliance, and demands for freedom. Never have the defects which preceded and accompanied this conquest of nature led to more surprising frustration, decadence, sterility, and dull standardization.

All this is in American literature, and the causes of both the successes and the failures are implicit, and often explicit, in early American books. James Fenimore Cooper, for Americans, is more significant than Sir Walter Scott, although it is only rarely that he equals him as a novelist. Herman Melville and Walt Whitman mean more to the American and are more revealing than the English writers, Thackeray and Wordsworth, although the English writers may have more often mastered their themes.

The objective of a history of American literature must be to record and explain the great men and women who have made this culture speak to the imagination. Literature can be used, and has been magnificently used by Americans, in the service of history, of science, of religion, or of political propaganda.....A history must focus within the margins of art, but the historian must cross them to follow the writers into the actualities of American life.

Inside these margins are so many notable writers that the emphasis must inevitably fall upon men rather than upon movements and institutions, although these must not be neglected. There is available for discussion the enlightened common sense of Benjamin Franklin, the first to make a modernizing Europe feel that there was a still more modern America. There are the astonishing intellects of Alexander Hamilton and Thomas Jefferson arguing great causes in letters and documents which became the political classics of their times. We have the communicable fire of Thomas Paine, the most effective propagandist of modern times. In the youth of the nation, the art of style was mastered by Washington Irving, suave in a tumultuous Commonwealth. In the same decades, the equally great art of story-telling was enriched by James Fenimore Cooper who added to the sagas of the world the heroic myth of Red Indian and pioneer.....There is the somber beauty of Nathaniel Hawthorne, the moral romancer of Puritanism; the fierce humor of Henry Thoreau's individualism; the shrewd saintliness of Ralph Waldo Emerson who spiritualized expansion; the soul-plunging adventures of Herman Melville's imagination; the prophetic Walt Whitman, seeking and finding new rhythms in which to sing democracy and the future of

the Common Man. There are historians who were also men of letters, and statesmen like Abraham Lincoln who could say the word which makes aspiration articulate. There was Henry James, looking both ways across the sea from an 'Atlantis' of his own creating; and Emily Dickinson, who saw eternity through the windows of Amherst; and Mark Twain tasting the bitterness of unchartered freedom while he told tall tales of an expanding America. There was Henry Adams, one of the great mind-searchers of our age.....

After the Revolutionary War, and the establishing of independence, itself a modifying influence of tremendous force, the wall of the mountains was breached in a dozen places, and waves from the seaboard pool, and new waves from across the sea, swept into the Mississippi Valley and on toward the Western mountains and the Pacific. Here, in this vast frontier, the Colonial culture of the East and, later, the powerful literatures of what was now an old New England and a mature East and South, were fertilized by pioneer experience, dynamized and transformed by the needs and new imagination of a people no longer European. Sectional literature became national literature. And while new ideas from abroad were continually absorbed, currents typically American in their influences began to roll back toward Europe and the rest of the world, a process of reversal that had begun with Cooper and Emerson in the early 19th century. By the 20th century and especially after its first World War, the United States was no longer a New World. Culture was now not immigrant except on a basis of equal exchange.

Thus American literature differs from all the modern literatures of Europe in that it is consistently dual in the sources of its inspiration and its themes. It has a quality which will presumably be characteristic of the literature of the future in a world more mobile and yet more integrated.

Sweeping the Cobwebs out of Our Museums

Georges Fradier writes in *Unesco Courier* :

A town I know is proud of its schools, colleges and teachers' training institutions. Yet in its museum, which should be such an important part of the educational system, it takes little pride. Housed in a dark and unattractive-looking building, the museum is open to the public twice a week, yet most people use it as a means of passing dull Sunday afternoons in winter.

The museum does not lack exhibits; on the contrary, it overflows with masterpieces representing three centuries of craftsmanship, a fine natural history collection bequeathed by an old scholar, African and Chinese art treasures brought back by an explorer of former times, and canvasses and drawings by 17th and 18th century masters—all mixed up in dusty rooms, inaccessible and useless.

Meanwhile, in the schools and colleges, teachers wish they could show their pupils real works of art, masks, vases and authentic ivories; they would like to have samples of rock for the geology lectures, stone tools for history lessons. All these things are to be found in the local museum—along with many other treasures—but the teachers will perhaps never know this.

Thousands of towns, although provided with museums, are yet deprived of them in this way, for those which aim to attract the public are still rare, except possibly in the United States.

It is true that hardly a hundred years ago even the most famous museums were content simply to amass and then jealously guard treasures from all lands, but they have since made enormous progress as science in general has come to realize its social responsibilities.

Only the most modern, in certain large cities have, however, managed to adapt themselves to perform a truly educational mission among people of all ages and cultures.

All Can Help

A Paris professor has declared that he would not know how "to give his pupils a satisfactory cultural background with an insight into the lessons of the past supplemented by a proper technical education," without taking them on carefully-prepared visits to art, science and history museums.

"Let us hope for an increase in the number of museums like the Palais de la Decouverte, the Musee de l'Homme and the Musee des Colonies," he says. "These, in my opinion, represent the prototype of the modern museums."

All museums, no matter what their origins or specialities, can serve education and collaborate more and more actively with schools. Those who run them are no longer simply "curators" and they would undoubtedly agree with one of their predecessors, Sir Henry Cole, who wrote what in 1874 was then a bold statement :

"If you wish your schools of science and art to be effective, your health, the air, and your food to be wholesome, your life to be long, your manufactures to improve, and your people to be civilized, you must have museums of science and art to illustrate the principles of life, health, nature, science, art and beauty." Such museums must indeed be set up, and luckily the models exist.

The Paris professor referred to above picked out as his preference among the "prototypes" the Palais de la Decouverte. This was founded in 1937, and has become one of the world's finest examples in scientific museology.

All who visit the Palais do not come out with a bent for astronomy or medicine. But in the words of the well-known scientist Louis de Broglie: "School-children and students find magnificently real and living illustrations of what they have learned in their books and lessons."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

He adds: "It may be that when a young man comes to realize the beauty of science and its role in the future of man, he will decide to concentrate his efforts and perhaps his whole life to it." Numerous school-teachers have declared that apparently mediocre classes are amazingly transformed after a few visits to the Palais de la Decouverte.

An International Plan

It was in the Palais—or at least in the office of M. Andre Leveille, its director—that the "Museums Crusade" was started. A preliminary meeting of teachers had recognized that the ideas and methods used in his museum should be made available to all France's schools and colleges and that a plan to enable all museums to participate actively in educational programmes be drawn up.

But this is not meant only for France. From the beginning, the leaders of the Crusade conceived it as an international one; and, with this aim in mind, they approached Unesco.

As a result the American Museums Association is undertaking the same programme as the Paris museums. Its leaders are soon to meet some of their European colleagues to study the best ways to reach their common goal —the widest collaboration between museums and schools.

In the Netherlands, the Ministry of Education has ordered a special commission to study how museum resources can be put more fully at the disposal of youth and the people generally. These meetings, inquiries and studies are being followed closely by Unesco.

Meanwhile, the Crusade is gathering momentum. Unesco hopes soon to bring together at an international seminar, museum experts, educators, artists and scientists who can help extend this scheme to many other countries.

It is thanks to such a crusade that the most humble museums, as well as the richest, can render the service they owe to the community.

No longer will there be museums whose collections of useless brick-a-brac slowly waste away in deserted show cases. Instead, students, teachers and apprentices will go freely there at any hour of the day, alone or in groups, to find the indispensable concrete examples and tangible proofs.

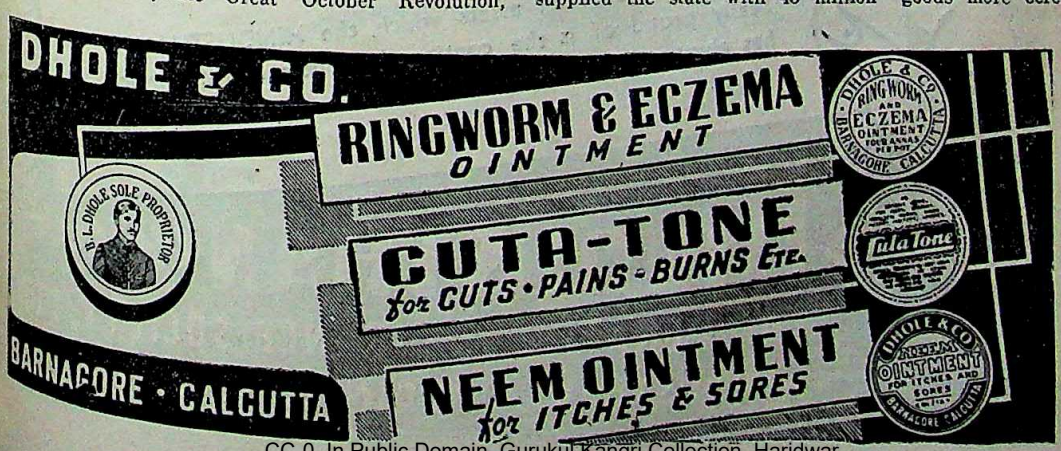
Soviet Kazakhstan

N. Undasynov, Chairman, Council of Ministers of the Kazakh SSR, writes in the *News and Views from the Soviet Union* :

In the friendly family of Soviet nations, the Kazakh people, regenerated by the Great October Revolution, achieved unprecedented political, economic and cultural progress.

In Soviet years, Kazakhstan has developed from a backward borderland of Tsarist Russia into a republic with a powerful industry and a well-mechanized, collectivized agriculture based on large-scale farming. The share of industrial production in national economy has grown from 6.3 per cent in 1920 to 60 per cent under the prewar Stalin Five-Year Plans.

During the Great Patriotic War, the national economy of Kazakhstan, and of the entire Soviet Union for that matter, was completely subordinated to the efforts to win victory over the German-Fascist invaders. Kazakhstan became one of the important arsenals of the U.S.S.R.



Through their selfless labours in the postwar years, the workers, collective farmers and intellectuals of Soviet Kazakhstan have considerably advanced the progress of national economy in their republic.

Industrial output has nearly doubled, as compared with the prewar year of 1940. Outstanding success has been achieved by the coal-mining and metallurgical workers of the republic who exceeded the Five-Year Plan provisions for the production of coal, steel and copper. Good work was also done by the electrical workers who fulfilled the five-year programme for electric power production in three years.

The five-year production plans were also completed ahead of schedule by many enterprises of the light and food industries. There has been a considerable increase in the production of general consumer goods in the republic. At the end of 1950 the production of woollen fabrics increased to 2.5 times the 1945 volume, the production of shoes was doubled, there was a fivefold increase in the production of hosiery, a 3.3fold increase in the output of confectionary products, a 3.2-fold increase in the output of vegetable oil and a threefold increase in the sugar production.

Soviet Kazakhstan is a republic with an advanced Socialist agriculture. Thanks to the solicitude of the Bolshevik Party and the Soviet Government, the collective and state farms of the republic attained noteworthy success under the postwar Five-Year Plan. The cultivated areas and the yields of the principal crops have increased far in excess of the corresponding Five-Year Plan provisions.

The efficiency of agriculture has been raised during the postwar Five-Year Plan period and the organization of labour has been improved in the collective farms. A bumper crop was harvested by the collective and state farms of Kazakhstan in 1950. The republic fulfilled the state grain deliveries ahead of the scheduled date and supplied the state with 45 million goods more cereals

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

than in the prewar year of 1940. The collective farmers have been generously rewarded for their selfless labour. Many collective farms distributed as much as 5-10 kg. of cereals, large quantities of vegetables and potatoes per workday unit, apart from cash payments.

Kazakhstan's agriculture is well provided with up-to-date machinery and fertilizers. Thousands of specialists with a high school and college training are employed in the state and collective farms. The achievements of the Michurin Agrobiology and advanced practical experience are applied in farming. The extent to which field work has been mechanized on the farms may be illustrated by the following figures: in 1950 the machine and tractor stations performed 70 per cent of the sowing, 34 per cent of the grain harvesting and 94 of the fallow ploughing in the collective farm fields.

The amalgamation of the small collective farms opens still greater prospects for the advancement of collectivized agriculture. By January 1, 1951 more than 4,500 small agricultural artels pooled their resources, uniting into 1,670 big collective farms. These are truly powerful farms which have great prospects before them.

The realization of the Stalin plan for remaking nature will bring still greater progress to agriculture in Kazakhstan. Work is now under way in Western-Kazakhstan and Guryev regions on the Ura river on the creation of a more than 1,000 km. long state shelter zone extending from Mt. Vishnevaya to the Caspian shore. New canals are being built in the Kzyl-Orda and South-Kazakhstan regions. Great changes will be brought about by the Main Stalingrad Canal whose route lies largely through the steppes of Kazakhstan. 10-12 million

1950 Always in the Forefront

In the forward march of Life Insurance in India, the HINDUSTHAN is, as it has always been in the forefront. The 44th Annual Report for 1950 once again reflects the soundness, integrity and strength which always have been so characteristic of the Society.

Assurances in force	Rs. 73,16,60,597
Total Assets	,, 17,70,70,624
Life Fund	,, 15,97,47,548
Premium Income	,, 3,40,47,338
Claims Paid (1950)	,, 72,92,850
New Business	**Rs. 13,75,39,851**

But the best of all assets which the HINDUSTHAN is really proud of is the continued Public confidence which has always attended its career.

HINDUSTHAN

hectares of inferior land will be converted into fertile tracts.

Kazakhstan is rightfully considered the most important livestock breeding centre in the East of the U.S.S.R. Livestock farming is now based on scientific methods and advanced practice, and extensive use of machinery. The first livestock farming machine stations have been set up in the republic and their number is constantly growing. As compared with 1945, the collective farms of the republic increased their common herds of dairy cattle by 47 per cent, the number of horses by 91 per cent, the flocks of sheep and goats have been doubled, and the number of pigs has grown fourfold. The state farms of the Ministry of State Farms of the Kazakh SSR, have achieved a 47 per cent increase in dairy stock, a 77 per cent increase in the sheep and goat flocks, a 94 per cent increase in the number of horses and a three-fold increase in the number of pigs.

The Bolshevik Party and the Soviet Government have taken all the necessary steps to promote the uninterrupted development of livestock farming in Kazakhstan. The great task set to the republic is that of achieving within the next five years a double increase in stock and a 34 fold rise in its marketable production.

Steps have been taken to effect a considerable increase in the number of scientific research institutions, and of the schools for training animal husbandry specialists. There will be an additional number of experimental research stations, a second animal husbandry and veterinary institute and a number of animal husbandry schools, hydro-technical and mechanization schools. The extensive use of up-to-date machinery and the creation of a stable fodder base in all the districts will make it possible to solve in a new way the pasture problem, and to transfer the cattle to a ranch and semi-ranch system.

The postwar Stalin Five-Year Plan period witnessed new remarkable achievements in science and culture. There were no more than two literate people per 100 inhabitants in Kazakhstan before the Great October Revolution. Only children of the Bais, Kulaks and merchants attended school, and there was not a single school where the native language was used, nor were there any colleges. In Soviet years Kazakhstan has developed into a republic with total literacy. About 1.5 million children are now attending the 9,000 Kazakh and Russian schools. There are 26 institutions of higher learning, 108 specialized secondary schools and thousands of young men and women of Kazakhstan are attending college in Moscow, Leningrad, Kiev and other cities of the U.S.S.R.

The Academy of Sciences of the Kazakh S.S.R. was founded in 1946 and many scientific research institutes were organized. Institutes for the mechanization and collectivization of agriculture, fodder and pasture research, forestry and irrigation have been founded in the past three years under the auspices of the Kazakh branch of the Lenin Academy of Agricultural Science of the U.S.S.R. alone.

Kazakh letters and arts are advancing along the highroad of progress. Fullfiling the historic decisions of the Central Committee of the C.P.S.U. (B) on questions of literature and art, the writers and art workers of Kazakhstan achieved noteworthy success. Themes showing the leading and guiding role of the Party of Lenin and Stalin, the characters of the Soviet leaders, the characters of ordinary people, their heroic Socialist labour, their ardent Soviet patriotism, their love of and devotion to the Motherland, to the Bolshevik Party, to J. V. Stalin, have become the principal theme in the arts.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The success of Socialist industry, agriculture and culture brought about a great improvement in the living and cultural standards of the working people. The Soviet Government allocates tremendous funds for financing social and economic undertakings. This may be seen from the fact that the budget of the Kazakh S.S.R alone allocated for education, health protection and other social and cultural purposes in 1950 more than 2.5 times the 1940 appropriations for the same purpose.

The most gratifying result of the postwar Five-Year Plan is the progress of the people, the advancement of their Communist consciousness and culture. The new Communist features are becoming increasingly conspicuous in the psychology of the Soviet citizens. The nation-wide Socialist emulation movement, the wide initiative of the working people intended to raise labour productivity —all this characterizes the Soviet people as masters of their Socialist State concerned over its might and progress. Just as in all other parts of the U.S.S.R., the postwar Five-Year Plan period has brought to light in Kazakhstan thousands upon thousands of Stakhanovites, innovators in production and agriculture. There are in the republic more than 800 heroes of Socialist labour, innovators in production, experts in boosting the crop yields and Socialist livestock farming.

The Stalin Prize Winner Mukhtar Kaptagayev, a locomotive engineer, the distinguished miner Saken Shakenov, the steel maker Altynbek Daribayev; the copper smelter Ulyan Koshik; the distinguished rice-grower Ibrai Zhakhayev, a Stalin Prize Winner; the distinguished collective farmers Olga Gonazhenko, Darikha Dzhantokhova and Bitai Tatenova, all Heroes of Socialist Labour who raised world record crops of sugar beet; Heroes of Socialist Labour, Zhamal Manapbayeva and Moldakym Musraliev, expert livestock specialists, and many others have won countrywide renown by dint of their selfless labour.

The workers, collective farmers and intellectuals of Soviet Kazakhstan are successfully advancing economy and culture, helping through their peaceful constructive labour to strengthen the might of their Socialist Motherland which is advancing towards Communism.—*Tass News Agency of the U.S.S.R.*

Royal Society Plans Memorial Scholarships for Lord Rutherford

Britain's famed Royal Society is seeking to establish memorial scholarships in honour of Lord Rutherford, the pioneer of nuclear physics. An appeal has been issued for subscriptions to a memorial fund which, it is hoped, will reach a total of £100,000.

The money will be used to set up Rutherford Scholarships tenable for three years, to be awarded to postgraduate students within the British Commonwealth, and a Rutherford Memorial Lecture to be delivered in New Zealand—where the great scientist was born in 1871—and elsewhere in the Commonwealth overseas. It is also proposed to arrange for the publication of his collected papers and for the collection, arrangement and binding of copies of his correspondence.

Rutherford's inspired interpretation of his observations and his genius for experiment, led to practically all we know about the structure of atoms. He developed the theory of the atom in Montreal; the final convincing proof he provided at Manchester, where he showed conclusively that an atom contains a central nucleus which is the seat of intense electric forces.

Through his investigations of the structure of the nucleus itself, he founded in the Cavendish Laboratory, Cambridge, the modern science of nuclear physics. He always worked on problems at the limits of human knowledge, inventing and developing the methods used for observation in these new fields. His uncanny judgement and his sheer energy made him the greatest physical scientist of his age. The practical results of his work—atomic energy and its by-products—followed a lifetime of devotion to the pursuit of knowledge.

It is probable that Rutherford will be remembered equally for his great powers of inspiring others. By his personality and forceful leadership his colleagues and students were stimulated to reach heights of acheivement which they could not have reached alone.

From his laboratories came many of the world's leaders of physical science to-day: all countries have felt the impact of his inspiration through the influence of scientific men trained by him. Moreover he did not confine his interest to purely academic science. For many years, as Chairman of the Advisory Council of the Department of Scientific and Industrial Research, he gave wise guidance to the Government in the encouragement and extension of the use of the scientific method in industry.—*Unesco Courier*

"EVERYBODY TALKS ABOUT THE WEATHER BUT NOBODY DOES ANYTHING ABOUT IT..."

This remark could be paraphrased about the subject of sex. Everybody thinks about it. Everybody realises its importance in human life and happiness, and yet so few do anything about it. But now something is being done and that in India! Dr. A. Pillay of Bombay is editing THE INTERNATIONAL JOURNAL OF SEXOLOGY with the help of a team of editors from 21 countries. It is the only Journal of its kind in the world devoted to the study of human relations in sex and marriage. It is scientific, instructive, interesting to read.

Those with courage to admit a normal human interest in sex and the important part it plays in life find THE INTERNATIONAL JOURNAL OF SEXOLOGY more than worthwhile because of its genuine educative value. It is now in its fifth year.

Won't you subscribe today? Both you and the Journal have much to gain from your regular readership.

UNESCO's 6th General Conference

"It is for tomorrow that we are working, but tomorrow begins today." Under this emblem of urgency, the official government representatives of 59 nations will gather together in Paris from June 18 to July 12 to decide on Unesco's course of action for the months to come.

This is the sixth time that delegates will be meeting at a Unesco General Conference. But 1951 is a critical year in which threats of war call more than ever before for co-operative international effort to help construct and guard intact the living fabric of world peace.

Conscious of these pressing requirements, the Executive Board of Unesco has drawn up a new draft programme for submission to the General Conference. It is a programme conceived not in terms of Unesco's theoretical potentialities but in the light of the practical experience of trial and searching gained in recent years. It is a programme that has been scaled down to permit concentration on a number of major practical problems facing the peoples of the world today in education, science and culture. (The 1951 programme contained 294 resolutions; the new draft programme has reduced these by 50 per cent.)

Ignorance is one of the deep-lying causes of conflict and war. Lack of fundamental knowledge for living breeds poverty, disease, under-nourishment and with these despair and violence. Perhaps the boldest and most far-reaching new proposal to be placed before delegates at the 6th General Conference will be a special $20-million, 12-year project for launching a world-wide campaign against ignorance and low standards of living. It has been called "the great campaign of men against their common enemy."

Enemies of the fundamental rights of men and women must resort to oppression which ultimately results in friction and conflict. The widest of the central themes running through the proposed 1952 programme is therefore action in the service of Human Rights. Thus, for example, the conference will be asked to approve new plans first for making these rights more widely known and understood by the peoples of the world. Specific projects, too, will be considered for studying methods of reducing racial discrimination; for an agreement to lift barriers to the free movement between countries of persons travelling for educational, scientific and cultural purposes; and for promoting the effective application of free and compulsory education as set forth in Article 26 of the Universal Declaration of Human Rights.

Three groups of peoples have a special claim to attention in the modern world. They are the workers, women and young people; and special efforts on their behalf dominate the proposed Unesco programme for 1952.

To take one example, the many problems of men and women workers are the focal point of the new adult education programme. One project calls for the establishment in 1952 of an international centre for improving workers' educational methods and for training specialists in this field. The proposed centre which is to be set up in co-operation with international trade unions, will also organize courses for workers, laying special stress on understanding among peoples of the world and the necessity of international co-operation within the framework of the United Nations.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

In addition, Unesco has been working on a broad programme for extending fellowship and travel opportunities for workers. In 1952 individual and group travel grants for them to study abroad are to be arranged through workers' organizations in different countries.

In the same way as for workers, the 1952 programme includes fellowship projects specially designed for young persons, and programmes in every department of Unesco for practical work to be done by young people, outside of school, through youth movements, voluntary work camps, science clubs, etc.

Working for the improvement of the status of women, Unesco will accentuate in 1952 ways of providing them with greater access to education and practical suggestions for the education of women everywhere for world citizenship.

The above examples are intended to convey only an idea of some of the practical themes which Unesco proposes to develop in 1952. There are of course others which are equally important and urgent. No mention, for example, has been made of the technical assistance plan for economic development in which Unesco in already providing and will continue to provide practical help to remedy inequalities of opportunity and means in education, science and culture, which today hamper under-developed countries. Mention should be made, too, of projects proposed for 1952 for increasing Unesco's campaign to teach and explain the principles of collective security and the contribution of the United Nations to peace.

In general, it can be said that in the 1952 programme to be submitted this month for approval by the General Conference, projects of academic interest have been sacrificed to those which have a direct or indirect effect upon present-day world problems and the programme has been given more practical direction throughout.—*Unesco Courier*, June 1951.

.....
Age..... Occupation.....
Enclosed 2 as. in stamps.

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will help you to the forefront and will help you, as no other single thing can, to reach the goal of your desires and achieve success.

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you at post, in your spare moments at home, to—

Enlarge Your Vocabulary by Thousands of Words;
Use the Right Word in the Right Place;
Correct all Errors of Grammar, Idiom and Diction;
Develop Originality of Style and Expression;
Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories, Reports and other Compositions;
Become an Engaging Conversationist and Be Popular in Good Society;
Be a Person of Culture, Power, and Influence;
Earn More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It will enable you to—

Conquer Timidity and Fear;
Banish "Stage-Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Charm and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Be Successful;
Be a Centre of Attraction in Social Gatherings;
Address Meetings and Sway All by Forceful Speech;
Become a Living Force and Win Admiration.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading educational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had under his tutelage many of the best known men in the public eye. His Mail Courses are his life work. They are for every ambitious man and woman who would use the English language for all one is worth in business and social life. We shall be glad to explain any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas in stamps. Will you do it TO-DAY?

ROUND THE WORLD

By **Mr. J. N. SINHA**

(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind." —*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know." —*Amrita Bazar Patrika*

34 Photographs & 3 Maps :: 2nd Edition—Price Rs. 7-8

RAMAKRISHNA
HIS LIFE AND SAYINGS

By

Prof. F. MAX MULLER

This is the first *Life* and collection of the Sayings of the Master in English by the great Orientalist and lover of India.

Gives a bird's-eye view of the religious movements of Sri Ramakrishna's time with a sketch of the Vedanta philosophy of which the Master was the living embodiment. Contains also 395 sayings and an exhaustive index.

'Sri Ramakrishna's life is presented in the book in very brief and simple language. In this life every word of the wary historian is weighed, as it were, before being put on paper.'

—*Swami Vivekananda*

Pp. 200. *Price: Rs. 5*

P-26, Raja Basanta Roy Road,
CALCUTTA.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place. × × × Like Tagore's the late Mr. Chatterjee's genius was essentially constructive. × × By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country. × × No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students."

—*Hindusthan Standard.*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya. × × The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated."

—*Amrita Bazar Patrika.*

THE MODERN REVIEW

OCTOBER 1951

VOL. LXXXX, No. 4 WHOLE No. 538

NOTES

Change in Congress Policy

The forthcoming elections are the main headache of the Congress High Command. How Pandit Nehru views the situation is well explained in the following news-items that are culled from the daily press:

"Sri Jawaharlal Nehru, in a speech at Lucknow after his election as Congress President, enunciated the change that would necessarily come in the Congress policy. His effort to bring the seceders back to the Congress-fold and to revitalise the organisation by selecting for the coming elections men of action and integrity who could fight for economic changes and a new social order marked a new and comprehensive change in policy pursued by the Congress for the past few years. It seems that the new President believes more in bringing in and increasing the number of new active and good men into the organisation rather than in a policy of purge. The new President insisted on unity inside the Congress and creating conditions for those who left the Congress to return. He said, 'that would be equal to half the victory at the polls.'

The Congress President, Pandit Nehru, asked members of the U. P. State Congress committee to select men of integrity and ability for the State legislatures and Parliament. He said that the legislators should be men of ability because they were expected to do some work and not merely to raise their hands according to the Party whip. But he declared, amidst thunderous applause from the thousands of visitors present in the hall, above everything else honesty should be the criterion of their selection. He opined that public servants should not only be honest but they should have the reputation of being honest.

Continuing, the Congress President said that the other criterion for the selection of Congress candidates should be their acceptance of the economic programme of the Congress and its approach to the communal question. He warned them that with the Congress coming to power, some opportunists who were formerly opposed to the Congress and even some anti-social elements were trying to join it. They should take into consideration the past of the candidates they selected.

Pandit Nehru said that for him election was not the main issue: It was only a side issue. He wanted to revitalise the Congress and restore the confidence of the people in the Congress. The selection of good candidates would restore the confidence of the people in the Congress and give the Congressmen self-confidence, the lack of which was one of the reasons of the state of affairs that now prevailed in the organisation.

The Congress President said that he was keen on strengthening the Congress, because the Congress had still a role to play in the country, and a vital role. Had there been no Congress today it would have become necessary to build an organisation like that to solve the problems that faced the country at the moment.

He was pained to see that the Congress was becoming an organisation where people did not act, did not even believe, in the resolutions that they passed. In this connection he referred to the case of Sri D. P. Mishra. He added that whatever happened to the Congress was going to affect the destiny of the country as a whole.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Referring once again to the seceders from the Congress, Pandit Nehru said that some of them wanted to come back while others were indecisive. But they should always keep their doors open and be prepared to welcome them warmheartedly, so that they could come back with honour."

As we gather from the above, Pandit Nehru has confused the issues. It is one thing to bring in "new active and good men," and another matter altogether to bring back those who left the Congress. He has declared "above everything else *honesty should be the criterion of their selection.*" We would ask as to how the honest men could be persuaded to join the ranks of the Congress unless they were sure that a distinction will be made as between them and the dishonest ones who crowd the ranks of the Congress, and who are actively trying to keep them out? Secondly, this affair of the "Prodigal Sons" who left the Congress and are now being welcomed back with open arms. We know and the public knows—indeed Pandit Nehru seems to be the only one that does not know—that a large number of unscrupulous political adventurers, who are adept weather-cocks, are now hurrying to make terms with the Congress for nominations, making that a condition precedent of their return to the fold. We know of notorious political adventurers who are now being backed by Pandit Nehru on that count alone. Unless Pandit Nehru shows discrimination in this matter all his efforts, and all his promises to the country, will end in futility.

The new Congress Executive nominated by him brings in a small infusion of fresh blood as is given in the following news-item:

"Sri Jawaharlal Nehru, Congress President, has nominated the following members to the Working Committee: Maulana Abul Kalam Azad, Sri Purushottam Das Tandon, Pandit Govind Vallabh Pant, Sri Morarji Desai, Sri Kamraj Nadar, Sri Shankarrao Deo, Sri Neelam Sanjiva Reddi, Sri Nabakrushna Chaudhuri, Sri Pratap Singh Kairon, Sri B. S. Hiray, Sri Gulzarilal Nanda, Sri Manikyalal Varma, Sri V. I. Muniswami Pillay, Sri Lal Bahadur Shastri and Sri U. Srinivasa Mallayya.

Sri Morarji Desai will be the Treasurer.

Sri Lal Bahadur Shastri and Sri U. Srinivasa Mallayya will be the General Secretaries.

There are still five vacancies in the Committee which will be filled later."

There is nothing in this new committee to show that a new chapter has begun. Perhaps the five places, as yet vacant, are for the new stalwarts. The inclusion of Tandonji is good but it means little in the present set-up.

How the seceders view Pandit Nehru's move is clearly indicated in the following extracts from the editorial of the *Vigil* of September 22:

"It appears that the main task of the new Congress President will be, at least until the coming general elections, to create and sustain an illusion in the country, namely, that the Congress by accepting his stewardship and its concomitants has undergone a basic, qualitative change. In politics, an illusion at times can be a very potent weapon, and in this case, the effectiveness of Pandit Nehru as a vote-getter for the Congress will depend a great deal on how well he succeeds in sustaining the illusion mentioned above. He has set about this task with characteristic energy, employing all his great gifts and the various means at his disposal to create the impression that under his presidentship the Congress is going to be, in moral and ideological overtones, something very different from what it was under Sri Tandon's. He has reshuffled the Congress Working Committee and is endeavouring to secure some changes in the Congress organisation further down at the State level also.

But what can these personnel changes amount to in terms of a real new orientation of the Congress? At the moment Pandit Nehru's mind seems concentrated on the idea that if he can bring back a notable few among those who left the Congress and formed the Praja Party he will have persuaded the country that the Congress has reformed itself. He is trying to achieve this by putting pressure on the Pradesh Congress bosses to receive a few of the more prominent dissidents back in their old places. This strategy, however, is not likely to succeed except to a very limited extent. . . . It seems the majority groups in all the States, after having bowed low to Pandit Nehru in Delhi, have on their return to their own territories stiffened their backs. This reaction was inevitable."

Without subscribing to the general tenor of the editorial, we are inclined to agree that at present the change in the Congress is illusory. A man cannot be said to have reformed by merely turning his coat twice. The contract getting, permit selling and corruption inducing factors will remain unless the corrupt men are purged. In this matter the following extracts from the resolutions passed by the Kerala Round Table Group, as published in the *Harijan* of September 22, are of considerable import, if good men are to come in. A man who would earn lakhs by illicit means through his position in the Parliament or the Legislature will more readily spend thousands for his own election than he whose sole motive is service to the nation. And the same applies to political groups:

Resolution No. 4.—"A declaration and practical demonstration should be made by right-thinking people that a life based on Truth *in every department* of life can be a practical, workable proposition on this earth."

"The practice of collecting political funds needs more vigilant watching. Political propaganda in the form of newspapers, pamphlets, etc., are highly commendable. The provision for public speeches before

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

elections and the supply of agents at election booths have nothing wrong in them. But the candidates providing transport and paying money to influence voting is unmitigated corruption. Success at such a cost is not worth having. Because there is not sufficient public opinion against such corrupt practices, political funds are built up by questionable channels. A political party with Gandhiji as the ideal has no justification to tolerate, not even connive at, such practices. Public opinion is to be created that we shall not have candidates elected under such conditions."

"Newspaper propaganda has considerably deteriorated in the country. Exaggerations and misrepresentations and indecent personal attacks have to be eradicated."

"Controls have often become similarly items of disruption and corruptoin. In any case, permit-holders and contractors to Government should not be nominated as candidates and if they stand should not be supported by the electorate."

Resolution No. 11.—"If the public are to support any nominees in the next election, the parties or local bodies are to insist on a written undertaking by the candidate—

(i) that he would spend at least 5 days in a month in the constituency, addressing the public bodies in the area and meeting them during weeks when the Assembly or its Committee, of which he is a member, is not in session; and

(ii) that he would resign within a week in case three-fourths of the elected *Panchayat* or Municipal members of the constituency in a meeting, after offering him a chance to explain any alleged misconduct or neglect, calls on him to resign. Notice may be given also for the above meeting to any party on whose ticket the candidate was elected.

"It is also stipulated that preference will be given to candidates who undertake to maintain truthfully in detail their election expenses and earnings as Assembly members or Ministers, including daily or travelling allowances, remunerations got for representations before Ministers and the Government on behalf of others, and place them before the public."

Kashmir Consembly

The National Conference Election Board has announced the names of 45 candidates who will contest the Constituent Assembly Elections on behalf of the National Conference from Kashmir Province. The Conference is contesting all the 45 seats allotted to the province by the Delimitation Committee. Applications from the Jammu Province are being considered. Kaushak Bakula, head Lama of Ladakh, will contest from Leh as a National Conference Candidate.

The foreign reaction to this election is mixed. On one hand we have forced disregard and on the other a garbled presentation as in the *Newsweek* of New York of September 17:

"The State Department is worried over India's apparent determination to force the Kashmir issue. An *India-sponsored Kashmir leader* now is calling for immediate election of what he calls a Kashmir constituent assembly which would determine the fate of the territory, claimed by both India and Pakistan. Since this election would permit only a single slate of candidates and would be held in an area dominated by the Indian army, there isn't much doubt about how the voting would turn out."

We do not know what is the source from which the *Newsweek* got this curiously twisted information. It shows total ignorance about the election conditions, both in Kashmir and in India, where the Congress is facing an extremely difficult and uphill task. As for terming Sheikh Abdullah "an India-sponsored Kashmir leader," we would only say that if the *Newsweek's* presentation of European and Asiatic news is on the same level, then it should caption all such news as fiction. Evidently such comments are made—rather manufactured—within the four walls of the office without the least effort at securing or looking up background material.

Meanwhile Pakistan has turned on heat again. Perhaps that is because of the dilemma in which Liaquat Ali and others of the same ilk have been placed in, with regard to the rebellious Pakhtoons and discontented refugees. With regard to the latter Sri Ramani gives the following figures in the *Vigil* of September 22:

Unit	*Muslim Refugees*	*Evacuees.*	*Increase or Decrease*
Punjab	48,82,000	39,40,000	plus 9,42,000
NWF Province	51,000	2,69,000	—2,18,000
Sind	5,61,000	9,00,000	—3,39,000
Baluchistan	29,000	31,000	— 2,100
Khairpur	11,000	46,000	— 35,100
Karachi	5,43,000	1,72,000	plus 3,71,000

Europe and the Cold War

The situation in Europe is well summed up, by the *World Interpreter* of August 10. Little has changed since then. We give the relevant extracts:

"Washington's desperate outcries over a possible letdown in the arms effort are directed less to the American people than to the peoples and governments of West Europe. Despite General Eisenhower's personal persuasiveness and ability, the military assistance program has fostered jealousy instead of unity, is running behind schedule, and is still widely unpopular.

"The truth is hard to estimate because of optimistic propaganda and numerous contradictions. *Life* magazine says, 'Ike revives Western Europe's will power and makes real progress toward restoring her fighting

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

strength.' *Newsweek*, more accurately, asserts U. S. defense officials are heavy-hearted, having assessed the situation with unwarranted optimism from the first.

"A measure of unification has been obtained, and five countries—Italy, France, Belgium, Luxemberg and West Germany—have signed a statement calling for an eventual pooling of arms. But even this limited plan, which leaves out other North Atlantic Pact nations, had to list under "disagreements" the vital questions of how many troops each country would supply, and how much of the cost each would bear.

"Although Eisenhower has made a few blunders, such as holding one important press conference entirely in English without an interpreter, he has been well liked and has met the many problems with vigor. Off the record, however, European leaders are already stating that their worst fears have been proved well grounded. No one has yet found a way by which the European countries, even with American help, can maintain the arms drive and keep a standard of living high enough to retain support for several of the most deeply involved governments. It was to stiffen these functionaries that Secretary Acheson told Congress no less than 25 billion dollars in arms help would be required during the next three years.

"Admission of Greece and Turkey to NATO (North Atlantic Treaty Organisation) continues to divide Pact countries. The Americans see this step as one which would bring added strength; other NATO countries believe it would result in weakness."

Regarding the wooing of Franco's Spain we get the following from the same source :

"More than bases for possible wartime use was involved in the discussions and arrangements between the Spanish Fascist regime and the late Admiral Forrest Sherman. Spain, ostensibly a pure anti-Communist country, had been shipping substantial quantities of copper, and probably mercury, to Russia. The sales were made through secret channels, but were known to Washington, which wanted to get the precious minerals for the West."

We also get the following information regarding the armed forces of the Soviet satellites in the same issue:

"Although precise information on the extent of the armed forces in the Russian satellite countries is difficult to get, the authoritative Royal Institute of International Affairs at London has published new figures. These coincide with those obtained by *Worldover Press* correspondents, and are a bit more conservative than estimates recently made public by Marshal Tito in Yugoslavia. The figures run as follows : Polish army, 450,000 plus 200,000 armed police; Czechoslovak army, 250,000 plus 150,000 armed police; Hungarian army, 180,000 plus 120,000 armed police; Bulgarian army, 180,000 plus 100,000 armed police; Albanian army, 60,000 plus 20,000 armed police; Romanian army, 280,000 plus 150,000 armed police. These units total more than 2,000,000."

Korea

The position in Korea is well summed up in the following extracts from the *Newsweek* of New York in its September 17 issue :

A new unknown soldier, identified only as "GI-X," was killed somewhere in Korea last week. He was the 1,000,000th American fighting man to fall in battle since the first Minute Man died at Lexington on April 19, 1775. He would not be the last. The end of the Korean war, which had already cost 81,766 American casualties (including 13,707 dead and 10,632 missing) seemed farther away than at any time since the Kaesong truce talks began July 10.

Already Gen. Matthew B. Ridgway's GHQ was charging: "Kaesong is a prime example of how a 'peace' conference can be dragged out ad infinitum when the Reds have no intention of doing more than play politics with human lives." On September 6 Ridgway himself told the Red high command that their "baseless and intentionally false" accusations of United Nations violations of Kaesong's neutrality made it "plainly evident" that any further use of Kaesong was foredoomed. He proposed "the selection of a new site" as soon as the Reds, who broke off the talks August 23, were ready to resume.

Pending genuine truce talks, the battle, not the green baize table, was again the payoff. In Korea's mountainous spine, the U.S. Second Infantry Division climaxed a limited U.N. offensive, involving also the First Marine, Seventh Infantry, and three ROK divisions and the Ethiopian Battalion, by grabbing the mile-long hog-back "Bloody Ridge," north of Yanggu, on which one-third of a million shells had rained. In the Western flatlands, the Chinese broke an unofficial, two-month-long cease-fire. Buttressed by Russian-made tanks for the first time since winter, they threw sudden, savage assaults against U.N. outposts. Ominously, a T-34 tank regiment was reported rumbling into the Kaesong neutral zone itself.

Whatever weakness American intelligence may have shown in the past, there is not the slightest disposition today to discount the evidence—presumably based on information from Allied agents behind enemy lines, prisoner-of-war interrogation, aerial reconnaissance, intricate G-2 formulas applied to truck traffic, etc.—that the Communists have made use of the truce-talk lull to carry out their biggest build-up to date.

Manpower : The once battered North Korean and Chinese divisions had been fleshed out, refitted, and reinforced from replacement depots stretching all the way to Mukden in Manchuria. Also, the Reds now have what General Ridgway's GHQ calls "large numbers of Caucasian Soviet puppet troops." Although their number is secret, Tokyo censorship has cleared a perhaps conservative guess that they total 5,000. They come from the European satellites.

Whereas they used to be able to keep going for only a week, they might now sustain a big push for three

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

or four times as long. Ammo dumps have been piled up in forward areas as if to beef up a renewed assault. Of the 500 Red tanks, 50 to 100, which possibly are operated by Caucasians, have been massed near the Imjin River's big bend close to the invasion corridors leading to the South Korean capital of Seoul.

Ack-Ack : Caucasians are believed to be manning the anti-aircraft batteries now protecting three key urban areas, especially Pyongyang, the North Korean capital. Although only 4 per cent of U.N. aircraft losses are due to Red planes, 30 per cent are caused by ground fire.

Aircraft : To obtain longer range for the 1,000 aircraft (a rock-bottom estimate) in Manchuria, the Reds are using some Caucasian engineers to help keep ten Korean airbases, plus ten small strips, operational in the face of almost clockwork plastering from the air.

Press Laws Bill

The Press Laws Bill has been introduced in the Parliament. Prime Minister Nehru has assured Press men that he would consider the question of appointing a Press Commission as early as possible. He said that he had given up thinking about it because the representatives of the Press did not show any enthusiasm about it. But as the working journalists had pressed for it, he would consider it again. But he said that the Commission could not be set up before bringing the proposed Press Laws Bill before the Parliament, as it would then involve some delay in the consideration of the Bill. The Prime Minister said that if a Commission was appointed it would take six months or more to submit its report. But the government thought that without waiting for its appointment or report, they should introduce the Press Laws Bill and repeal certain out-of-date laws, etc.

Meanwhile, Press reports indicate that the Press Laws Bill drafted by the Home Ministry is not confined to repeal of existing obnoxious Press Laws. Demand and forfeiture of security deposits has been provided for in the Bill, the only reassuring feature being that this will be done under a process of law and appeal will lie to High Court against the decisions. Security deposit could be demanded under the following objectionable matters: (a) Indecent scurrilous writings, (b) To overthrow the government by violent means, (c) To undermine the administration of law, *i.e.*, Law Courts and law and order of the states and the centre, (d) Creating hatred and enmity among classes of citizens, (e) Not to tamper with procurement of foodstuffs, (f) Not to tamper with the duty and services of the police, army and government servants.

If it be the desire of the government as expressed by the Prime Minister, to introduce the Press Laws Bill for the purpose of repealing obnoxious Press Laws, there should be no two opinion about it. But when the Bill contains positive and penal provisions, it will be wise and worthy of the Government to wait for the report of the proposed Press Commission. Six months' delay will be much less harmful than the imposition of unpopular Press Laws.

Press Bill in Select Committee

The Home Minister, Sri C. Rajagopalachari, on September 7, moved reference of the Press Bill to a Select Committee. He proposed a Committee of 34 members. Sri Deshbandhu Gupta, President of the All-India Newspaper Editors' Conference declined to serve on the Select Committee because he did not agree with the very principle of the Bill. He said that it was a discriminating Bill. It discriminated between the freedom of expression allowed to the individual and the freedom allowed to a newspaper. That was a very dangerous principle.

In the concluding portion of his speech, Sri Gupta said, Sri Rajagopalachari said that members of the Press had asked for special privileges but when Government brought forward special legislation, the Press took a different stand.

"I want to make it clear," said Sri Gupta, "that the Press of India has never demanded any special privileges. All that they demanded at the time of Constitution-making, when the Fundamental Rights were being considered by the Constituent Assembly, was that there should be a specific provision guaranteeing the freedom of the Press."

"There was nothing special about it. When it was explained by the Law Minister that freedom of expression included freedom of the Press the representatives of the Press in the House and the Press in general in the country were satisfied."

As a matter of fact, Sri Gupta continued, "The stand that the Press of India, the Commonwealth and other democratically governed countries have taken is that the same amount of freedom which is guaranteed to an individual citizen should also be guaranteed to the Press. We want neither special privileges nor special penalties. We want neither any special treatment by way of concessions nor any special laws to fetter our freedom."

Government, he said, should consider whether, after having made "so many assertions here and outside the House that the Press of India is a free Press and no disability attaches to it," there was any need for any special legislation to deal with the Press.

Sri Gupta said that sufficient time had not been given to the House, to the Press and to the country to consider this very important Bill. The measure was not textually brought before the Standing Committee attached to the Home Ministry. He was indebted to the Home Minister for having agreed to meet the members of the Standing Committee of the All-India Newspaper Editors' Conference but there also the text was not available. That was why he had tabled a motion for circulation.

Obviously, the main object of bringing forward the Bill was to allay the fears or apprehensions of the Press, which it entertained at the time of the amendment of the Constitution if that was so, what objec-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

tion could Government have to give time to the Press and to the country to express their views on the measure?

The impression created by the speech of the Minister, said Sri Gupta, was that the bill was a very liberal one and that some fundamental changes had been made in the Press Laws of India in favour of the Press.

To meet that argument, he added, it was necessary to go into the history of Press Laws in India. It was in 1857, after India's first War of Independence, that the British Government, for the first time, introduced a measure which imposed absolute control on newspapers. That measure was just for one year and no more. In 1878, the Vernacular Press Act was passed, confined to the language papers. That law was limited to three years.

Except for that brief interval, the Press of India was governed by the ordinary law of the land until 1908. In 1908, the first important Press Act, called the Newspapers (Incitement to Offences) Act was passed. That Act introduced for the first time the principle of imposing previous restraints on newspapers in the form of demanding securities. It was followed by the hated Press Act of 1910, which gave much wider power to Government. Those two Acts held the field for about twelve years until 1921.

In 1921, a committee was appointed by Government to consider the question of repealing these two Acts. On the recommendations of that Committee, the two Acts were repealed in 1922 on the ground that they were emergency measures and that the political situation had undergone great changes since 1910.

From 1922 to 1930, the Press of India was again governed by the ordinary law of the land. That was a fact which had, perhaps, escaped the attention of the Home Minister.

During the Civil Disobedience Movement in 1930, again the British Government issued an ordinance to deal with the Press. That ordinance was followed in 1931 by the Emergency Powers Act. That was the Act on which the Home Minister had based his bill.

Sri Gupta said it was noteworthy that that Act was to remain in force for one year only, though it could be extended from time to time and later made part of the permanent law. The Legislature, which passed the original Act, conceived that a measure like that could not be on the Statute permanently.

In the original Act, he continued, there were only two clauses. Other clauses were added later. "Objectionable matter" was defined and Government were empowered to require the keeper of a press and the publisher of a newspaper respectively to deposit security up to Rs. 1,000 which might be increased to Rs. 3,000 if any previous keeper or publisher had been required to deposit security. It was provided further that the security should be refunded if no offence was committed within a period of three months.

Sri Gupta said, he did not have the figures, but he was sure that securities were forfeited in very few cases during that three-month period.

Another measure affecting the Press, which replaced the Ordinance of 1931, was the Foreign Relations Act of 1932, he added. In 1934, the Indian States Protection Act was passed. Then came the Second World War and the Defence of India Rules were promulgated. Those rules, of course, gave wide powers to Government for controlling the Press. On September 30, 1946, the Defence of India Rules came to an end. During the course of 1946 and 1947, most of the Provincial Governments enacted ordinances to deal with the situation. Those ordinances were in due course replaced by temporary emergency legislation—the Public Safety Acts—by the State Legislatures.

Sri Gupta stated the provisions of those emergency enactments, in so far as they related to the Press, referred to the imposition of precensorship, control of publication, etc. The Home Minister seemed to think that pre-censorship had been part of the Press Law for all time in the country.

"It has never been so," said Sri Gupta, "precensorship was no part of the Emergency Powers Act of 1931. It was no part of the Press Act of 1910. It was no part of the Act of 1908. Of course, during the war, the Defence Rules were there but they were an emergency measure and we have already got ample emergency powers to deal with such a situation."

"It was only in 1946 and 1947 that the Provincial Governments, probably in order to deal with the after-effects of the war introduced this element of precensorship in the Statute. Is it contended seriously that these emergency measures, which for the first time provided for precensorship, are to last for ever? Is it really a concession if that precensorship is withdrawn? On the other hand, Government should not have waited for so long to withdraw this previous restraint which is so undemocratic and which interferes with the Press."

When the Defence of India Rules ceased to operate, Sri Gupta added, Press of India renewed its demand for removal of the objectionable features of the Press Law. The late Sardar Patel was kind enough to agree to the appointment of a Press Law Enquiry Committee which reported in May, 1948. The recommendations of the Committee had been before Government since May, 1948. But when he, Sri Gupta, asked the Prime Minister during the debate on the Constitution (First Amendment) Bill what had happened to the recommendations of the Committee, the Prime Minister replied that he had not seen them. The Home Minister, however, had said earlier that since the Constitution had given full freedom to the Press, most of the recommendations of the Committee

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

had become unnecessary. That was the position before the Constitution was amended.

Sri Gupta moved for incubation of the Bill for eliciting public opinion. He warned that if the Bill was passed "the little reputation we have built upon the eyes of the world will be tarnished." In his second day's speech he pointed out that out of the 34 clauses of the Bill as many as 16 had been bodily lifted from the Press Ememgency Powers Act of 1931 without caring for the effect they would create.

He added Clause 3 relating to "objectionable matters" was "not only most important but also most objectionable." It was very wide and extensive and if it was passed in this form "it will amount to perpetual injunction on the Press not to publish anything which may be covered by this Clause." Impression had been given to the House that Government was repealing the Act of 1931 and the other repressive laws, but "I find in these eight sub-clauses there is nothing which will not cover the existing repressive measures."

In fact the sub-clauses were "much wider than they are to be found anywhere in the existing law. They would be able to gag any criticism of the Government." "Any agitation against continuation of control or that control which breeds corruption can be brought within the purview of the sub-clause of Clause 3. Sub-clause 6 dealt with 153A of the Penal Code which had been declared unconstitutional by the Punjab High Court. But it had not only been reviewed but significant change had been made in the wording widening the scope of the offence. Sub-clause 7 corresponded to section 363 of the Indian Penal Code. This sub-clause was not to be found in the Press Emergency Powers Act, this was a new clause which gave wide power to the Government to take action against newspapers. It would thus be found that not only Clause 3 included substantially all the repressive provisions of the existing law but new clauses had been added to widen its scope. It is for the House to decide whether the Minister is right in claiming that the Emergency Powers Act of 1931 has been repealed and the recommendations of the Press Laws Enquiry Committee in this regard have been carried out."

Sri Gupta quoted the *Hindu* of Madras which said that Clause 3 was provided out of "suspicion and distrust of the Press which was the characteristic feature of the British rule." The *Hindu* said that the present law was sufficient to meet the situation.

Rajaji: But *Hindu* has said that the present law is bad. The Hon'ble Member's argument was better.

Sri Gupta: All imaginable things which a paper can comment have been brought within the purview of the "objectionable matters."

Referring to clauses 4 and 5 he asked, "Is it the intention of the Government not to make it possible for a newspaper to reappear if it has committed an offence? Is it also the intention of the Government that the Press, which was used to print that paper should be closed for printing all other matters?"

"That shows," he added, "the disregard from the practical point of view which Government has for printing press proprietors. The Section said if a publication printed an objectionable matter, the editor and the keeper of the Press be asked to deposit securities and if securities were not deposited the press be prevented from doing any work. I wonder if the Minister has pictured in his mind the working of small papers which are printed in small press. It is not expected that the keeper of the press is to act as censor on what is printed in them."

Sri Gupta said that the whole conception of the Bill was based on vicarious liability. He added that Clause 32 was the most objectionable feature of the Bill. It provided for the editor or the keeper of the press being prosecuted and punished twice for the same offence which was obviously contrary to the letter and spirit of the Constitution.

On September 12 the debate on the Press Bill took a new turn when Congress Party members came out in support of the measure. The only opposition that day came from Dr. S. P. Mookerjee who, in a powerful speech, described the Bill as a "revised version of the notorious Press Act of 1931." The mailed fist might be covered with a little velvet, he said, but the mailed fist was there nonetheless.

Pandit H. N. Kunzru supported the motion for circulation and said that the Government had failed to make out any case in favour of the Bill.

In his reply the Home Minister said that the ordinary law was inadequate to deal with the Press. He said that reference had been made to the proposed Press Commission. The Press Commission, referred to by the Prime Minister, was intended for certain purposes which had nothing to do with the matter of this Bill. The aims and objects of such a Commission had been explained by the Prime Minister. It has to go round, take evidence and see things as to how newspapers are produced and managed and things of that kind and not much to do with the content of newspapers.

Hindu Code Bill

The Indian Parliament resumed consideration of Clause 2 of the Hindu Code Bill which had been carried forward from the last Session. 32 amendments to the clause were moved, Dr. S. P. Mookerjee strongly supported the demand for making the application of the Code optional. He raised a very pertinent question when he said that it was nobody's case that monogamy was good for the Hindus or Buddhists or Sikhs alone. Why not have a separate Bill dealing only with monogamy and make it applicable to all citizens. The real reason was that the Government dared not touch the Muslim

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Community. Let the Law Minister declare that at least the portion of this Bill dealing with monogamy will be made applicable to all.

A piquant situation has arisen over the Bill. It is understood that President Rajendra Prasad recently discussed the Bill with the Prime Minister. His views appear to be that the present Parliament has no mandate to pass the Bill which would be almost a revolutionary measure and deeply affect the structure of the Hindu society. The President is understood to have requested the Prime Minister to drop the Bill. But Sri Nehru is determined to go ahead with it in the current session. Probably this was the background when Dr. Ambedkar stated in the Parliament that as soon as the end of Chapter 2 of the Bill dealing with monogamy, marriage and divorce was reached it was his intention to move certain suitable amendments to make that chapter self-contained and get that part of the Code passed. The intention of the government, he said, was to make that chapter an independent Code.

With regard to the other sections of the Code, he added, under the Rules, two courses were open. One was at the end of Chapter 2 a closure might be moved and the rest of the Code be negatived, so that Government might withdraw the rest of the portion and take their own time to bring in another self-contained code later on other subjects such as inheritance, adoption, etc.

The second course, Dr. Ambedkar explained, which was also permissible under the existing rules of procedure would be to take up the whole Code part by part and pass them by stages. That procedure, if adopted, would mean that when they reached the end of Chapter 2, they could have that Chapter adopted and leave the rest of the Code for the future Parliament to pass.

This clarification was given by the Law Minister when the Chair requested him to make it clear as to whether the scope of Clause 2 of the Bill, which related to the applicability of the Code would be restricted only to provisions relating to marriage and divorce or would also apply to other sections of the Code dealing inheritance and property. It was necessitated when Sardar Bhopinder Singh Mann in his remarks on Clause 2 began to deal with the general principles and sought to exclude the Sikhs from the purview of the Code.

The Deputy Speaker said that if the scope of Clause 2 would apply to other provisions of the code also other than to the clauses relating to marriage and divorce, he could not preclude members from referring to the general principles. Then passage of even the limited provisions of the Bill during the current session would become difficult for want of time.

The Prime Minister also intervened and said that so far as Government was concerned, they stood by the whole of the Bill. But due to difficulty of time and other difficulties, they had decided to adopt Part 2 of the Bill during the current session and leave the other parts to some subsequent date. That did not mean that they had dropped the other parts of the Code. But speaking from practical experience as there was no chance they should adopt the said procedure.

We consider that it would have been much better to extend the scope of this portion of the Code, make it an all-embracing Marriage, Divorce and Monogamy Bill applicable to all sections of the citizens irrespective of religion. This would have gone a great way to lay the foundation of a unified citizenship in this country.

India and Japan

India has refused to sign the American Draft of the Japanese Peace Treaty placed at the San Francisco Conference. Prior to this Conference, the Prime Minister of India announced that India would not claim any war reparations from Japan. India chose her own line of action in respect of the Jap Peace Treaty and announced that the State of War with Japan would end as soon as the Peace Treaty signed at San Francisco came into force.

Meanwhile ludicrous comments—displaying the magnitude of American ignorance about Asia and the Asiatics—are appearing in the U.S.A. press. For example, the following appears in the *Newsweek* of September 17 :

The gap left by India and Burma is something for them to worry about. Nehru's claim to speak for the free peoples of Asia has been repudiated as sharply as Gromyko's.

The following is the text of the correspondence between India and Japan :

Letter dated 8th September, 1951, to the Japanese Acting Foreign Minister, Mr. S. Matsuani, from Sri K. K. Chettur :

"In accordance with the statements made by the Prime Minister of India in regard to the Japanese Peace Treaty and the declared intention of the Government of India to terminate the State of War between India and Japan at the earliest possible date and to establish full diplomatic relations between the two countries, I have the honour to enclose herewith a draft notification which the Government of India propose to issue simultaneously with the coming into force of the peace treaty which is scheduled for signature at the conference now in session at San Francisco.

"In expressing the hope that the above proposal will be acceptable to the Government of Japan, the Government of India would be grateful for an early reply."

Letter dated Sepember 10, 1951 from Mr. Matsuani to Sri Chettur:

"I have the honour to acknowledge with thanks the receipt of your letter dated September 8, 1951, with which you enclosed a draft notification which the Government of India propose to issue simultaneously with the coming into force of the Japanese Peace Treaty which has just been signed at San Francisco.

"On behalf of the Japanese Government I have the honour to state that the Japanese Government heartily welcomes the intention of the Government of India to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

terminate the state of war between Japan and India and to establish full diplomatic relations between the two countries."

Following is the text of the draft notification which India proposes to make :

"It is hereby notified for general information that the Government of India, bearing in mind that active hostilities with Japan were ended by Japan's signature of the instrument of surrender nearly six years ago and that a Treaty of Peace with Japan has been concluded and signed at San Francisco on the 8th September, 1951, by a large number of the Allied Powers, have determined that the State of War between India and Japan shall cease to exist as soon as the said Treaty of Peace comes into force for any State in accordance with the provisions contained in Article 23 thereof.

The Government of India propose to conclude at the earliest practicable date a separate bilateral Treaty of Peace with Japan whereby the relations between themselves and the Government of Japan could be brought into conformity with the amity which existed between them before the declaration of war with Japan.

In that treaty the Government of India intend to stipulate provisions which will secure to themselves and the nationals of India all the rights, privileges, indemnities and advantages, together with the right to enforce the same, which under the Treaty of San Francisco have been stipulated in favour of the Allied Powers and their nationals."

The following is Article 23 of the Japanese Peace Treaty which is referred to in India's notification terminating the State of War between India and Japan :

(a) "The present treaty shall be ratified by the States which sign it, including Japan, and will come into force for all the States which have then ratified it, when instruments of ratification have been deposited by Japan and by a majority, including the United States of America as the principal occupying Power, or for the following States, namely, Australia, Burma, Canada, Ceylon, France, India, Indonesia, the Netherland, New Zealand, Pakistan, the Philippines, the United Kingdom of Great Britain and Northern Ireland, the Union of Soviet Socialist Republics, and the United States of America. The present treaty shall come into force for each State which subsequently ratifies it, on the date of the deposit of the instrument or ratification.

(c) If the treaty has not come into force within nine months after the date of the deposit of Japan's ratifioation, any State which has ratified it may bring the treaty into force between itself and Japan by a notification to that effect given to the Government of Japan and of the United States of America not later than three years after the date of deposit of Japan's ratification."

Education of "Our Masters"

We do not know whether or not the British Conservative Party's Education Minister was serious when he used these words where the 'masses' in Britain were first restored votes in 1867. But the words have taken root; and modern science has put in the hands of States instruments to 'educate' the voters and mould their opinion. Our Information Minister, Shree R. R. Diwaker, is fully conscious of this new opportunity. In course of a recent broadcast he referred to 'documentaries' as a means of mass education.

"I do not think we have any other medium by which we can approach the rural masses who live in the villages. Today the documentaries that we produce and our news-reels are shown in 3000 cinemas, 900 of them being rural mobile cinemas which go from place to place. In addition 250 Publicity vans of the different States also take advantage of these films and on a modest calculation it is computed that about 50 crores see these films and news-reels every year. If the value and importance of documentaries and newsreels are realised by the India Government, they should also try to raise their tone and expand their scope. For documentaries there is a vast field as indicated above. If we really feel proud of our getting the Venice prize on 'Rajasthan,' let us take a pledge to make more documentaries like that in the vast field before us."

A Politician's Plight

Pandit Dwarka Prasad Mishra, Madhya Pradesh's ex-Home Minister, has brought down some amount of unpopularity on himself. If he had resigned, as dictated to by his political conscience, made the customary statement explaining his desire to retire from the Congress, people would have been only sorry. But his Press interview on the eve of resignation, and the statement made to the Assembly, has resulted in the Nagpurians burning his effigy after a procession. He wanted his statements to administer a few 'shocks' to India's Prime Minister as would 'knock off dictatorship out of his mind.'

But, he need not despair. If he can keep silent only for a few years, we have no doubt that his present detractors will welcome him as the prodigal son returned with Pandit Govindas at their head. But the silence must be sincere. And our recipe is a course of constructive work. It will make a new man of him.

Estimates Committee Recommendations

Action has been taken by the Central Government on a number of recommendations made by the Estimates Committee. Detailed information about the actions taken has been placed in the Parliament by Sri Mahabir Tyagi, Minister of State for Finance:

"In pursuance of an important recommendation, the External Affairs Ministry has closed down a number of commercial establishments abroad including those in Baghdad, Prague, Toronto (Canada), and Brussels. Reduction in the commercial staff was effected in Tokyo, Kabul, Teheran and Rio-de-Janeiro.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"As a result of these measures the national exchequer would be saved from an expenditure of Rs. 12,10,000 annually.

"The Ministry of Works, Mines and Power has accepted the recommendation that private enterprise should be encouraged to take up the work of discovering and developing the sources of wealth in addition to the work done by the Geological Department.

"Another suggestion of the Committee that a special mining cess should be imposed for the development of the Geological Survey of India has, however, been turned down by the Government.

"The recommendation made regarding a thorough overhaul of the C.P.W.D. with a number of retrenchments was still under examination.

"The Hydro-Electric Branch of the Central Water, Irrigation and Navigation Commission (C.W.I.N.C.) has been abolished in accordance with another recommendation of the Committee.

"Enquiries have also been instituted into the working of the stores purchase machinery and that of the uneconomic salt factories of the Government.

"An economy of Rs. 25,000 a year has been brought about by reorganising the Estate Office on the lines suggested by the Committee.

"A number of journals published by the Commerce Ministry have been wound up and 'only the important and necessary ones' had been retained, as recommended by the Committee.

"Recommendations regarding the reduction of staff in various branches of the Commerce Ministry have been partially implemented.

"A recommendation regarding the Import-Export Directorate which has not been accepted, was that the names of the firms black-listed by the Department should be published in the Official Gazette. It is pointed out in the statement that there is no statutory provision for black-listing firms. Such an action is taken on the basis of executive authority and therefore publishing the names of such firms in the Gazette without adequate legal sanction might lead the Government to litigation and difficulties.

"The former Jute Commissioner was replaced by an 'experienced person', according to another recommendation.

"Steps have been taken to concentrate the statistical sections of the Ministry in one branch with the ultimate object of merging them with the Central statistical organisation under the Cabinet Secretariat as stipulated by the Estimates Committee.

"The Government had also accepted the recommendation of the Estimates Committee for greater efforts to increase India's trade with Asian countries.

"A directory was under preparation, as recommended by the Committee which would contain a list of names of all importers of Indian goods in foreign countries and all the exporters in the countries.

"Other recommendations of the Committee accepted by the Government were: *Tea broking*: Three Indians would be selected by each of the four non-Indian tea-broking firms in Calcutta, for training in tea-broking by next year.

"*Import Licences*: It had been decided that the minimum value of a license to a new-comer should be Rs. 10,000, unless a license happens to be for items which were received in small consignments such as razor blades. In these cases, the minimum would be Rs. 5,000.

"It had also been prescribed that the qualification for an applicant to receive consideration as a new-comer would be that he had dealt within the country in the particular commodity, which he wished to import, for at least two years.

"Following the recommendations of the Mehta Committee, the maximum value of a new-comer's license had been fixed at Rs. 25,000."

India's Note to Pakistan

The Government of India in a Note handed over to the Pakistan High Commissioner in Delhi has taken strong exception to the baseless insinuations and statements appearing frequently in the Pakistan Press, the sole object of which is to "embroil the relation of India with her friendly neighbours."

The Note, which also answers allegations made by the Pakistan Government against the Indian Press and All-India Radio on the subject of Pakhtoonistan dispute between Pakistan and Afghanistan states :

"The Government of India are unable to accept the contention of the Government of Pakistan that the Press in India has been other than impartial and neutral with regard to the dispute between Pakistan and Afghanistan. The differences between Pakistan and Afghanistan on this subject have received wide publicity through the radio and the newspapers both of Pakistan and of Afghanistan and in other countries, and it is not surprising therefore that they should have attracted interest in India.

"The Government of India have again carefully examined the material published in the Indian Press and are satisfied that the Indian Press has on the whole maintained and continue to maintain an attitude of objective and impartial presentation of news regarding Pakhtoonistan movement. All important statements in regard to this subject made by the Government of Pakistan or by persons in authority in Pakistan have been carefully and faithfully reported in the Indian Press. As already pointed out by the Government of India the Press in India is, within the limit set by the Constitution and the laws of India perfectly free to express opinions or comments, including those which are hostile to the Government of India themselves. The Government of India cannot compel or coerce the Press or the public in India to hold any particular opinion."

The Note also rejects Pakistan's allegations that the All-India Radio contains hereditary partiality in favour of

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Afghanistan in this dispute or broadcast "fabricated news." The All-India Radio, the Note points out, makes use of news-items available from the Bakhtar News Agency or the Kabul Radio in the same way as it uses news-items emanating from the Pakistan Radio. All-India Radio, for example, on January 24, 1951, January 22, 1951, and April 10, 1951, broadcast statements and contradictions issued respectively by the N.-W.F.P. Government, by the Pakistan Prime Minister and the Pakistan Minister of frontier regions regarding clashes between Pakhtoons and Pakistan forces. "These examples could be multiplied and they will show," the Note points out, "that the All-India Radio puts forword the Pakistan views on these questions with equal impartiality. The sole criterion for putting out any item is its intrinsic news value."

"The Government of India have also carefully examined the commentaries, news-items and other items forming the enclosure to the Pakistan High Commissioner's Note under reply. They would point out that in regard to several of these items the translations as given in the enclosure to the Pakistan High Commissioner's Note under reply are incorrect. Apart from this, the material given in the enclosure shows conclusively that the broadcasts of the All-India Radio on this subject have been restricted mainly to factual news. In so far as any comments have been made with regard to the issues in this dispute, these merely point out that while the Government of Pakistan talk of self-determination for the people of Kashmir, they take an entirely different attitude towards the demand for self-determination by Pakhtoons."

The Note, continuing, states that the question of breach of the Inter-Dominion Agreement of December 14, 1950, can hardly arise. In the view of the Government of India that agreement is intended to ensure that the Press of either country does not support demand in one country for an acquisition of territory included in the other country. The agreement does not cover any questions regarding relations between either of these two countries and a third country. No question of international law arises in this context and the Government of India entirely dissents from the proposition that the publication within India of news and views regarding a dispute between Pakistan and Afghanistan, with both of whom they have friendly relations, amounts to a violation of international law or usage.

"The Government of India take this opportunity of drawing attention to the fact that both the Pakistan Press and the Pakistan Radio have frequently indulged in vilification and in some cases explicit statements to the effect that the support of the Government of Afghanistan to the claim of the Pakhtoons that they be given the right of self-determination with regard to their future, originates from inspiration from India. The Government of India strongly protest against such baseless insinuations and statements which are extremely detrimental to the friendly relations between India and Pakistan on the one hand and India and Afghanistan on the other. The Government of India are also unable to accept the contention that the Pakistan Press has been sober and objective in regard to its coverage of events relating to India's relations with Nepal, Tibet and China. The actual facts of past events are by now well established and the Government of India are no longer exercised in regard to several completely false and fabricated items of news which appeared in the Pakistan Press at that time. They would, however, point out that the sole object of these insinuations and allegations was to embroil the relations of India with her friendly neighbours and that such efforts reveal anything but a friendly attitude towards India."

Within a fortnight of this Note, the Pakistan Government have banned the entry of two of the leading Calcutta newspapers the Ananda Badar Patrika and Hindusthan Standard into Pakistan. The Pakistan Government are incessantly complaining about Press propaganda in India in spite of the fact that the governments here are doing their best to prevent any breach of the joint Press Code. When Pakistan persistently refuses to follow the joint Code, we believe India can now rightfully consider herself relieved of any obligation to follow the joint Press Agreement.

Minorities in Pakistan

Two news appeared in the Press towards the end of August last which demonstrate the falsity of the claim that the minorities in Pakistan are fairly and honourably treated. We use the word "minorities" advisedly. The Muslim League's congenital animus to Hindus and Sikhs is fairly known to the world. Not so the conditions under which Indian Christians have been living there.

The first news referred to the release by the Barisal Magistrate of the Muslims charged during the riots of February, 1950, with murder, rape and loot in the village Madhabpasa, well-known all over Bengal since the Swadeshi days. They, six Muslims, Seraj Maulana, and his helpers, Majir Meah, Gafur Meah, Kanchan Mollah, Nawab Ali Mena, Syed Ali, Palan Sardar were charged under Sections 148, 302-34 of the Penal Code. The Magistrate was helped by three assessors; two were for acquittal; one was in doubt; and the Additional District Judge, H. Ullah, accepted the verdict of trying Magistrate Huda.

The case started on July 23rd last. A fact that should be known in connection with the Madhabpasa tragedy, relieving it of its bestiality, was that a neighbouring zaminder, Janab Altaf Ali, lost his life at the hands of his co-religionists in his vain attempt to save the Hindus. All honour to his memory!

The other news was sent out on August 30 last from Lahore, and we do not propose to make any comment on it.

Mr. Justice Kanji Dalpatram Thakkar, Christian member of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Punjab (Pak.) Assembly, said here on Wednesday, 29th August, that the reasons for the recent attack by Muslims on Christian residents of village Matta in Lahore district were 'primarily economic.'

"While I have deep appreciation for the manner in which the Government and the people, both Muslims and Christians, have behaved, I cannot help saying that to secure complete goodwill and understanding between Muslims and Christians in Pakistan for all times, the Muslim League must give a lead and try to develop the national platform where Muslims and Christians could meet to discuss matters of common interest to the state and its people.

"True, Pakistan is an Islamic State, but Muslims and Christians have lived together for the last 1,300 years and more, and I see no reason why the traditions of common nationality of other Muslim countries, where Muslims and Christians live as one people, would not be revived in Pakistan also."

A Memorandum

The Press of the world has been forced to recognize the significance of the Memorandum that 14 Muslim leaders of thought, administrators, leaders of public opinion, and leaders of trade, commerce and industries, submitted to Dr. Frank Graham, U.N.O. representative on the Kashmir dispute on the 14th of August last—the anniversary of day on which Pakistan was born. There is a hint of historic revenge on the choice of this particular day for two reasons. One is that the Memorandum questions the validity of the reasoning on which the Pakistan theory was built up. It attacked the "two-nation" theory that has resulted in murder, rape, destruction of property to more than two millions of men, women and children of Indian birth. The other reason is that many of the signatories to the Memorandum were in sympathy, open or implicit, with the Muslim League's pretensions; some of them supplied money to Muslim League propagandists and otherwise helped to finance the agitation.

We hope that the world will realize even at this late hour that Pakistan or the theory that upheld it is a distortion of India's traditions, of the joint life that Hindu and Muslim, men and women, had built up in our continental country. We also hope that Pakistanis will yet realize that the disruption of India's unity and integrity has weakened Hindus and Muslims alike and would keep them weak.

On more than one occasions we have emphasized the point that without consultation with President Truman, the Prime Minister of Britain, Mr. Attlee, could not have announced on February 15, 1947, that British power would be withdrawn from India at a date which was earlier by 12 months than what had been fixed when the declaration of the Cabinet Mission was made on March 15, 1946. The Secretary of State for India, Lord Pethic Lawrence, indicated much later in various speeches made specially in the House of Lords after the June 3rd, 1947 decision that an unreconciled India would require more British military formations to defend and control, the enlistment of more troops from the "martial" races of India. And as an act of faith his Government believed that as a Dominion or even as a Republic in the British Commonwealth, India would be a better proposition to handle.

But British policy had publicly mortgaged itself to the Muslim League in October 1, 1906, when the Aga Khan Deputation had waited on the then Governor-General Lord Minto. And since 1939 the Muslim League had been demanding the pound of flesh for helping to betray Indian Nationalism and its natural culmination. This is only history today, and would have been forgotten if the Pakistanis had not started their Kashmir adventure. Today they have received on their face the cruellest slap in the form of a 1600-word Memorandum. That they have been feeling the sting of it is proved by the apologetic tone in which Janab Zafarullah Khan, Pakistan's Foreign Minister, has tried to off-set its reasoning. At the annual dinner of the Karachi Institute, held on the 17th August last, he could not but refer to it. He is reported to have said that the Memorandum proved that "but for Pakistan a hundred million Muslims would have been living in that state of inward terror in which 35 or 40 million Muslims are now living there (India)."

"The memorandum amounts to this that if you and I had been in India today we would have been compelled to say what they (fourteen Muslims) are saying and that constitutes before man and God a complete justification for Pakistan which they have condemned in harsh words." Further he felt in "all seriousness" that "it is an extremely painful move not on account of what it says," but because "these gentlemen, who have occupied higher positions and rendered services, who have been eminent in their respective walks of life should have been reduced to the necessity of putting their signatures to a document of that character." He tried to assume a mock attitude of sympathy for the signatories to this Memorandum, and assured them that he proposed "to say nothing that should cause them pain. I feel for them. I feel for them the deepest sympathy. People like them, unless placed in the most painful position of a dilemma, would not have subscribed to a document like that. They need, deserve, our sympathy. Our sympathy goes out to them. I still hold them in the highest esteem."

"I can, therefore, in some small measure gauge the feeling of frustration, the feeling of being on the horns of a dilemma, through which they must be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

suffering. This document shows they are continually suffering."

In this 120-minute speech, the "Qadiani" dupe of Pakistan has excelled his previous performances. But those who know about the feelings of the majority of Muslim masses against his sect with its "Holy of Holies" in India, will not fail to notice that in referring to the "frustration" of Indian Muslims, Pakistan's Foreign Minister was giving voice to his own feelings. If there be any substance in this argument of his, it applies with equal logic to the position of his sect in Pakistan.

We have been tempted to devote more space to Janab Zafarulla Khan's crude attempts at distortion that it deserves. We now have to return to the Memorandum. It is as follows:

"It is a remarkable fact that while the Security Council and its various agencies have devoted so much time to the study of the Kashmir dispute, and made various suggestions for its resolution, none of them has tried to ascertain the views of Indian Muslims nor the possible effect of any hasty step in Kashmir, however well-intentioned, on the interests and well-being of the Indian Muslims. We are convinced that no lasting solution of the problem can be found unless the position of Muslims in Indian society is clearly understood.

"Supporters of the idea of Pakistan, before this sub-continent was partitioned, discouraged any attempt to define Pakistan clearly and did little to anticipate the conflicting problems which were bound to arise as a result of the advocacy of the 'two-nation' theory. The concept of Pakistan, therefore, became an emotional slogan with little rational content. It never occurred to the Muslim League or its leaders that if a minority was not prepared to live with a majority on the sub-continent, how could the majority be expected to tolerate the minority.

"It is, therefore, small wonder that the result of partition has been disastrous to Muslims. In undivided India their strength lay about ten million. Partition split up the Muslim people, confining them to three isolated regions. Thus, Muslims number two and half crores in West Pakistan, three and half to four crores in India and the rest in Eastern Pakistan. A single undivided community has been broken into three fragments, each faced with its own problems.

"Pakistan was not created on a religious basis. If it had been, our fate as well as the fate of other minorities would have been settled at that time. Nor would the division of the sub-continent for reasons of religion, have left large minorities in India or Pakistan. This merely illustrates what we have said above that the concept of Pakistan was vague, obscure and never clearly defined, or its likely consequences foreseen by the Muslim League, even when some of these should have been obvious.

"When the partition took place, Muslims in India were left in the lurch by the Muslim League and its leaders. Most of them departed to Pakistan and a few, who stayed behind, stayed long enough to wind up their affairs and dispose of their property. Those who went over to Pakistan left a large number of their co-religionists behind. Having brought about a division of the country Pakistan leaders proclaimed that they would convert Pakistan into a land where people would live a life according to the tenets of Islam. This created nervousness and alarm among the minorities living in Pakistan. Not satisfied with this, Pakistan leaders went further and announced again and again their determniation to protect and safeguard the interests of Muslims in India. This naturally aroused suspicion amongst the Hindus against us, and our loyalty to India was questioned.

"Pakistan has made our position weaker by driving out Hindus from Western Pakistan in utter disregard of the consequences of such a policy to us and our welfare. A similar process is in operation in Eastern Pakistan from which Hindus are coming over to India in a large and larger number.

"If Hindus are not welcome in Pakistan, how can we, in all fairness, expect Muslims to be welcome in India? Such a policy must inevitably, as the past has already shown, result in the uprooting of Muslims in this country, and their migration to Pakistan, where, as it became clear last year, they are no longer welcome, lest their influx should destroy Pakistan's economy.

"Neither some of those Muslims who have migrated to Pakistan after the partition and following the widespread bloodshed and conflict on both sides of the Indo-Pakistan border in the north-west, have been able to find a happy asylum in what they had been told would be their homeland. Consequently some of them have had to return to India, *e.g.*, the Meos who are now being rehabilitated in their former areas.

"If we are living honourably in India today it is, therefore, certainly not due to Pakistan which, if anything, had by her policy and action weakened our position. The credit goes to the broad-minded leadership of India—to Mahatma Gandhi and Pandit Jawaharlal Nehru, to the traditions of tolerance in this country and to the Constitution which ensures equal rights to all citizens of India irrespective of their religion, caste, creed, colour or sex.

"We, therefore, feel that tragically as Muslims were misled by the Muslim League and subsequently by Pakistan causing unnecessary suffering to us and our Hindu brethren in Pakistan and in India since partition, we must be gvien an opportunity to settle down to a life of tolerance and understanding to the mutual benefit of Hindus and Muslims in our country; if only Pakistan would let us do it.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"To us it is a matter of no small consequence. Despite continuous provocation, first from the Muslim League and since then from Pakistan, the Hindu majority in India has not thrown us or members of other minorities out of civil services, armed forces, the judiciary, trade, commerce, business and industry. There are Muslim Ministers in the Union and States Cabinets, Muslim Governors, Muslim Ambassadors representing India in foreign countries, fully enjoying the confidence of the Indian Nation, Muslim Members in Parliament and State Legislatures, Muslim Judges serving on the Supreme Court and High Courts, high ranking officers in the armed forces and Civil Services, including the Police.

"Muslims have large landed estates, run big business and commercial houses in various parts of the country, notably in Bombay and Calcutta, have their share in industrial production and enterprise, in export and import trade. Our famous sacred shrines and places of cultural interest are mostly in India.

"Not that our lot is entirely happy. We wish some of the State Governments showed a little greater sympathy to us in the field of education and employment. Nevertheless, we feel we have an honourable place in India.

"Under the law of the land our religious and cultural life is protected and we shall share in the opportunities open to all citizens to ensure progress for the people of this country.'

"It is, therefore, clear that our interests and welfare do not coincide with Pakistan's conception of the welfare and interests of Muslims in Pakistan. This is clear from Pakistan's attitude towards Kashmir. Pakistan claims Kashmir first on the ground of the majority of the State's people being Muslims, and secondly on the ground of the State being essential to its economy and defence. To achieve her object she has been threatening to launch *Jehad* against Kashmir and India.

"It is a strange commentary on political beliefs that the same Muslims of Pakistan, who would like the Muslims of Kashmir to join them, invaded the State in October 1947, killing and plundering Muslims in the State and dishonouring Muslim women, all in the interests of what they described as the liberation of Muslims of the State. In her oft-proclaimed anxiety to rescue the three million Muslims from what she describes as the tyranny of a handful of Hindus in the State, Pakistan evidently is prepared to sacrifice the interests of forty million Muslims in India.

"A strange exhibition of concern for the welfare of fellow-Muslims: Our misguided brothers in Pakistan do not realise that if Muslims in Pakistan can wage a war against Hindus in Kashmir, why should not Hindus, sooner or later, retaliate against Muslims in India?

"Does Pakistan seriously think that she could give us any help if such an emergency arose or that we would deserve any help, thanks to her own follies? She is incapable of providing room and livelihood to the forty million Muslims of India, should they migrate to Pakistan. Yet her policy and action, if not changed soon, may well produce the result which she dreads.

"We are convinced that India will never attack our interests. First of all, it would be contrary to the spirit animating the political movement in this country. Secondly, it would be opposed to the Constitution and to the sincere leadership of the Prime Minister. Thirdly, India by committing such a folly would be playing straight into the hands of Pakistan. We wish we were equally convinced of the soundness of Pakistan's policy.

"So completely oblivious are they of our present problems and of our future that they are willing to sell us into slavery if only they can secure Kashmir. They ignore the fact that Muslims in Kashmir may also have a point of view of their own, that there is a democratic movement with a democratic leadership in the State, both inspired by the progress of a broad-minded, secularly democratic movement in India and both naturally being in sympathy with India. Otherwise, the Muslim raiders should have been welcome with open arms by the Muslims of the State when the invasion took place in 1947.

"Persistent propaganda about *Jehad* is intended, among other things, to inflame religious passions in this country. For, it would, of course, be in Pakistan's interests to promote communal rioting in India to show to Kashmir Muslims how they can find security only in Pakistan. Such a policy, however, can only bring untold misery and suffering to India and Pakistan generally, and to Indian Muslims particularly.

"Pakistan never tires of asserting that she is determined to protect the interests of Muslims in Kashmir and India. Why does not Pakistan express the same concern for Pathans who are fighting for Paklitoonistan, an independent homeland of their own? The freedom-loving Pathans under the leadership of Khan Abdul Ghaffar Khan and Dr. Khan Sahib, both nurtured in the traditions of democratic tolerance of the Indian National Congress, are being subjected to political repression of the worst possible kind by their Muslim brethren in power in Pakistan and in the North-West-Frontier Province. Contradictory as Pakistan's policy genreally is, it is no surprise to us that while she insists on a fair and impartial plebiscite in Kashmir, she denies a fair and impartial plebiscite to the Pathans.

"Pakistan's policy in general and her attitude towards Kashmir in particular thus tend to create conditions in this country which in the long run can

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

only bring to us Muslims widespread suffering and destruction. Her policy prevents us from settling down, from being honourable citizens of a State, free from the suspicion of our fellow-countrymen and adapting ourselves to changing conditions to promote the interests and welfare of India.

"Her sabre-rattling interferes with her own economy and ours. She expects us to be loyal to her despite her impotence to give us any protection, believing at the same time that we can still claim all the rights of citizenship in a secular democracy. In the event of a war, it is extremely doubtful whether she will be able to protect the Muslims of East Bengal who are completely cut off from Western Pakistan. Are the Muslims of India and Eastern Pakistan to sacrifice themselves completely to enable the 25 million Muslims in Western Pakistan to embark upon mad self-destructive adventures?

"We should, therefore, like to impress upon you with all the emphasis at our command that Pakistan's policy towards Kashmir is fraught with the gravest peril to the forty million Muslims of India. If the Security Council is really interested in peace, human brotherhood and international understanding it should heed this warning while there is still time."

The signatories to the Memorandum are: Dr. Zakir Hussain, Vice-Chancellor, Muslim University, Aligarh; Sir Sultan Ahmed, formerly Member of the Governor-General's Executive Council; Ahmed Said Khan, Nawab of Chattari, formerly Acting Governor of the United Provinces, and Prime Minister of Hyderabad; Sir Mohammad Osman, formerly Member of the Governor-General's Executive Council, Acting Governor of Madras, and Vice-Chancellor, University of Madras; Sir Iqbal Ahmed, formerly Chief Justice, Allahabad High Court; Sir Fazal Rahimtoola, formerly Sheriff of Bombay; Maulana Hifz-ur-Rehman, Member of Parliament, General Secretary, Anjuman-i-Jamiat-ul-Ulema Hind; Nawab Zain Yar Jang, Minister for Public Works Department, Government of Hyderabad; A. M. Khwaja, Barrister-at-Law, ex-President, Muslim Majlis; T. M. Zarif, General Secretary, Daudi Bohra Muslim Community, West Bengal; H. Qamar Faruqi, Preisdent, Jamiat-ul-Ulema, Hyderabad; M. A. Kazmi, Advocate; M. L. Hashim Premji, ex-Sheriff of Bombay; Col. B. H. Zaidi, Member of Parliament, and formerly Prime Minister of Rampur State.

"Mission with Mountbatten"

Articles entitled as above have been appearing in the *Hindu* of Madras and the *Hindusthan Times* of Delhi, since September 2 last. As we write eight or nine articles have already appeared, and we propose to summarize or make small quotations therefrom for the benefit of our readers. These throw very valuable light on developments that happened during the days —24th March, 1947 to June 3, 1947—the period of Mountbatten negotiations consummating in the partition of India, the birth of Pakistan, and finally in the invasion of Kashmir. It has been announced that the articles will appear in book-form from London.

The writer, Mr. Alan Campbell-Johnson, landed at Palan with Lord Ismay, Chief of Staff of the New Viceroy, after a temporary visit to Britain, and the first letter is dated October 28, 1947. He was not given opportunity to rest, but was called in by the Viceroy to be briefed "at once on the latest Kashmir developments." This appears to suggest that Alan was in a position of the utmost trust, though we are not told for whom he was being briefed. Figures of men like V. P. Menon, State Ministry's Secretary, of Major-General Rees, Commander, Punjab Boundary Force (July to September 1947) and Commander of the Governor-General's Military Emergency Staff (September to December), flit through these letters, not to mention Gandhiji, Nehru, Patel. Campbell-Johnson gives facts in place of the rumours and speculations which fed the public during those dangerous days.

The new emergency in relation to Kashmir has made the publication quite timely. At his first briefing Mountbatten gave the information that it was at his suggestion and under pressure from him that the Nehru Cabinet agreed to accept "accession" of Kashmir when the request came from Maharaja Hari Singh for it, as it was a condition precedent to the sending of India's military formations to the help of the State. Without this accession India would have been as much an invader as Pakistan has been. "The legality of the accession is beyond doubt," says Campbell-Johnson, and continues that on this particular issue Jinnah has been 'hoist with his own petard,' as it was he who chose, over Junagad, to take his stand on "the over-riding validity of the ruler's personal decision." Before the 'transfer of power,' the ruler's choice became the people's, but after it the position changed—the people's voice was determining. It was Maharaja Hari Singh's "chronic indecision" that must be "accounted a big factor" in the Kashmir crisis.

Campbell-Johnson has showered flowers of praise on Mountbatten's "canniness" and "extraordinary vitality" while Nehru is shown as wasted by worry, and "collapsed" on October 28 on reaching his own house. Gandhiji had blessed the Kashmir accession; and Mountbatten's "90-minute" interview helped to tide over all difficulties. And he struck a "Churchillian note" in referring to the fight of the Indian "regiment of infantry" flown to Kashmir and compared it to "Thermopylae."

Jinnah had ordered on October 27, 'that Pakistan troops "be moved in to Kashmir;" only Auchinleck's persuasion and pressure could move him

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to cancel the order. It had reached "General Gracey, the Acting Pakistan Commander-in-Chief, in the temporary absence of General Messevy, through the Military Secretary of the Governor of West Punjab with whom Jinnah had been staying. Gracey replied that he was not prepared to issue any such order without the approval of the Supreme Commander. At Gracey's urgent request Auchinleck flew to Lahore this morning and explained to Jinnah that as Kashmir had acceded to India, the Government of India had a perfect right to send in troops in response to the Maharaja's request."

Mountbatten's Public Relations Officer thus describes the "Ian Stephen episode":

> Mountbatten is disturbed by the editorial attitude of the *Statesman* which in its anxiety over the decline in Indo-Pakistan relations has denounced the injection of Indian troops into Kashmir, and he asked me to arrange for Ian Stephen, the editor, to come and see him. About an hour later Stephen was with us, and Mountbatten began by saying: 'You can't build a nation on tricks.'

We do not propose to bring out the significance of this angry exclamation. Was Ian helping in this trickery by his articles? Or, was it expected that the words would be conveyed to the Pakistani bosses. This is, however, mere guess-work. But the *Statesman's* attitude has not changed during these four years. Its Pakistani slant is unmistakable. It cannot be otherwise in a paper owned by British shareholders. As long as their country feels that her interests will be served by Pakistan, she will pamper her pretensions.

Working of Indo-Pak Trade Pact

India's Commerce and Industry Minister laid on the table of the Parliament figures relating to certain items of imports from and exports to Pakistan under the Indo-Pakistan Trade Pact of February last. According to these figures, Pakistan supplied 5,35,163 bales of raw jute up to the end of June 1951 and 7,10,633 bales up to the end of July.

The Government of Pakistan has since come out with a different set of figures. It states that the actual export of Pakistani jute to India up to the end of July was 8,79,953 bales. The Karachi Press Note claims that Pakistan had done its best to honour the commitments to India and that it was India which had not given its contracted quantities of goods. It says that goods valued at Rs. 4.06 crores were exported by India to Pakistan during March-June 1951, while Pakistan exported goods worth Rs. 27.64 crores. The Press Note also says that its Government delivered 1,09,544 tons of rice against 1,18,800 tons contracted for and arrangements for the remaining 9000 tons had also been made. Meanwhile, when the Pakistan rice began to come it was reported that most of them were weevil-eaten and therefore worthless. With regard to the export of Indian Coal, the Press Note states that India's exports of coal by sea amounted to only 2,74,350 tons up to the end of June and 3,46,788 tons up to the end of July and not 4,16,801 and 4,98,871 tons as claimed by India's Industry Minister. Exports from all routes up to the end of June amounted 3,39,421 tons against 6,09,000 tons agreed to be supplied by that date. The total quantity of Indian Coal supplied to Pakistan up to the end of July was 4,28,031 tons.

With these conflicting statements before us it is difficult to make any correct assessment of the Indo-Pak trade position. The political pact in respect of minorities has not been successful as is evident from the White Papers issued by the Government of India and the public statements and counter statements made on both sides of the Radcliffe Line. A correct assessment of the trade figures may be considered essential for a lasting solution of the Indo-Pak problem.

Books in Essential Goods List

Various representations from Chambers of Commerce, individuals and associations have reached the Ministry of Finance of the Government of India in regard to the inclusion of certain items in the list of commodities to be declared as essential for the life of the community under the essential goods (Declaration and Regulation of Tax on Sales or Purchase) Bill 1951, introduced in the last session of the Parliament. While these suggestions are receiving the attention of the Government, official circles point out that it is not possible to incorporate any of the suggested items on the list because the Bill has already been placed before the Parliament. We fail to understand why it will not be possible to add a few more items on the list when the Bill is on the Legislative anvil. This can certainly be done on a Government motion. Nothing prevented the government from amending the Fundamental Right clauses of the constitution in clear disregard of popular opinion when the government considered it necessary to do so.

The following goods have been listed as essential under the Bill :

1. Cereals and pulses in all forms, including bread and flour including atta, maida, suji and bran (except when any such article is sold in sealed containers).
2. Green or dried vegetables and flower seeds, bulbs and plants and fresh and dried fruits, other than medical preparations (except when any such article is sold in sealed containers).
3. Fresh milk, whole or separate, and milk products.
4. Salt.
5. Coarse and medium, handloom and mill-made, cotton cloth and handloom woollen cloth.
6. Fertilizers and agricultural machinery and implements.
7. Raw cotton, including ginned and un-ginned cotton or kapas or cotton thread, cotton seed, raw jute and sugarcane.
8. Coal, including coke and other derivatives, petroleum and petroleum products, including motor spirit and electrical energy, except energy intended for domestic use.
9. Iron and Steel.

When the Bill becomes law, imposition of Sale or Purchase tax on any of these commodities has to be reserved for consideration of the President and will be legal only when the President's consent has been received.

The Bill, according to our opinion, has two vital defects. Firstly, omission of books from the list is a glaring one. Even in most of advanced democratic countries books have been excluded from the scope of Sales or Purchase Tax. India has just started building up a democratic tradition. Exclusion of books from the Sales Tax list, reduction in postal rates on books and special concessional rate on the air freight of books are three things that the government can immediately do. The second defect of the Bill is that it will not have any retrospective effect and therefore the existing taxes will not be affected. This will frustrate the purpose of the Bill for a very long time to come. The exclusion ought to be given an immediate effect on the present taxes as soon as it becomes law. If Rs. 40 crores of revenue could be lost on the prohibition schemes which are of doubtful utility and success, there is no reason why the government should not forego a little more revenue by placing books on the essential list.

India Government Plane Misused

We have got so used to the misuse of Government property by its officers and even by the Ministers that the people register mere disgust. That we are not far wrong in our estimate is borne out in the remarks of a Nagpur contemporary appearing in one of its articles of a recent date. The names of Ministers are not mentioned—an editorial practice which leads nowhere, as the Minister or Ministers concerned are saved from a public exposure. We share these comments with our readers so that they may be enabled to understand the sorry state of things.

"Defects in Government accounting and submission of supplementary demands before Parliament have been found by the Auditing officers of Government. They have found that in eleven cases supplementary demands presented to Parliament proved to be unnecessary. They have also brought to light misuse of Government planes by some of the Ministers. They say that while travelling on duty by planes chartered by Government, certain Cabinet Ministers allowed some non-entitled persons to travel along with them. Under the rules, a Minister while making journey by air in a Government machine has to pay first class full or half railway fare as the case may be. In some cases recovery of small sums due from two Ministers on the above account was waived by Government. But another Minister has incurred an expenditure of Rs. 51,462 by such use of Government planes. Some confusion has arisen in this regard and it is not possible to assess the exact amount. Some attempts were made early this session to raise the matter on the floor of the House but Rajaji cleverly evaded questions."

Leprosy Relief at Gorakhpur

From September 1 to September 9, the Leprosy Association of India had a "Leprosy Week." Rich and poor co-operated in making it a success. From Gorakhpur in the Uttar Pradesh comes the news that a sum of Rs. 55,000 was sanctioned for leprosy relief by the executive committee of the provincial Gandhi Smarak Nidhi at its meeting held on August 18 under the presidentship of Baba Raghav Das, its convener, at Lucknow, and Shri Dharm Deo Shastri was requested to start leprosy relief work at Hrishikesh. The Gandhi Memorial Fund has taken this work up as a special charge. In other States also grants from this Fund for Leprosy Relief must have been made. We wait their reports.

"Problem" Province of Assam

Administrators and newspaper-men have developed a habit of dubbing a particular area as a "problem" if it had any particular set of grievances that confuse them. The following news sent from Gauhati on September 2 last explains the difference between political and natural problems :

> "Most of rivers in the north-east Frontier are now forming new courses due to the heavy and rapid silting up and consequent elevation of their beds as a result of the great earthquake of August 1950 and the later floods.
>
> Reports of air survey and land reconnaissance parties show that the Dibang, Lohit, Deopani, Digaru, Kundil and scores of smaller rivers that flow down the Mishmi hills (which was battered by the earthquake killing 900 people) are running in a wayward manner and at places are spreading like spider webs on account of big landslips blocking their original routes. Old rivers' courses are now untraceable in many areas as they have given place to a network of turbulent and wild running streams. Because of the changes in their beds, these once-deep rivers are not able to hold the volume of rain and floodwater discharged into them by hundreds of streams and rivulets and they are therefore forcing their way through places heretofore high and dry.
>
> This has brought in its wake serious problems of flood and erosion resulting in considerable loss to property and life."

Hindi "Sammelan Politics"

The use of the words within quotation marks in the issue of the Allahabad *Leader* dated August 29 last has an ominous ring to people who have the cause of general literature in India at heart. To those who aspire to make Hindi the State Language in fact the introduction of "politics" must be extremely painful.

We do not understand why Shree Jaychandra Vidyalankar, the President of the Sammelan, should have his little quarrel with the General Secretary, Shree Ram Charan Agarwal. The two are thus centres of factions which are engaged in unending quibbles and insinuations not often within the bounds of decency. The *Leader* publishes statements made by a member of the Sammelan's Constitution Committee, followed by statements by the General Secretary and the President. The High Court being called to decide, has issued a restraint order !

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

CC-0. Mumukshu Bhawan Varanasi Collection. Digitized by eGangotri

The inevitable "fast unto death" has been undertaken by Shree Suman Vatsayan in far-off Wardha; he demands an "impartial enquiry" into the workings of the Rashtra Bhasha Prachar Samiti. These are signs of disintegration in the spirit of Sammelan workers. And we have no doubts that the present controversy will not spread the Rashtra Bhasha. It may enrich the vocabulary of the controversialists.

"Indian Problem" in Fiji

We do not know why the *Press Trust of India and Reuter's* correspondent in Fiji should have featured their news with these words:

"An 'Indian problem' is raising its head in Fiji, the Sugarcane Islands, which owe their prosperity to indentured Indian labour.

"Indians constitute the majority community on the Islands, exceeding the combined Fijian and European population. According to the British Administration in Fiji, the Indian birth-rate has increased steadily, 'threatening the standard of living of other races on the Islands.'

"Fiji's population figures are: Fijians 130,000; Europeans 6,500; Indians 140,000.

"The Administration has reported that Fiji's important social services, including health and education, 'are bursting at the seams,' as the Islands' population had increased by 8,000 in the last 12 months.

"There is little racial conflict in Fiji today, but sources close to the Administration believe a testing time will come when the pressure of increasing numbers leads to a steady Indian demand for more land. This claim for land, they think, will overshadow the issue of increased Indian political representation, probably at the expense of the Europeans.

"According to the Administration's policy, Fijian interests will remain paramount and land reservations are being made to cater to the immediate and future needs of the Islands' native population.

"The Administration is also reported to be concerned over the political feelings of Fiji's large Indian population. Though the majority of 'Fiji Indians have little interest in their homeland, they look to India for political inspiration and guidance. The Administration, therefore, is likely to be confronted with an embarrassing situation in the event of India adopting a policy different from that of Britain or the Commonwealth on any major issue."

The correspondent has gathered his news from 'sources close to the Administration' which being European, have the initial anti-Indian bias. In the ultimate analysis, Indians who had made their homes during the last 125 years, are as good as native Fijians; they must sink or swim with the latter. It is only the 'Malan spirit' that can set and keep the peoples apart.

In Malan's Realm

South Africa is geographically far-off. But it is not allowing us to forget it. The Boer-Briton combination has reduced this sun-kissed land to a hell for its native peoples and the men and women of other lands whose labour has made what it is today.

The 3rd August issue of the *Indian Opinion*, founded by Gandhiji nearly 50 years ago, and now edited by Shree Manilal Gandhi enables us to realise something of the spirit of that rule and of the revolt in reaction.

"The National Executives of the African National Congress and the South African Indian Congress decided at a joint meeting in Johannesburg last 20th July to set up a Planning Council for a mass campaign by Natives, Indians and Coloured people against oppressive measures that have been recently passed by the present Government.

Dr. J. S. Moroka, president-general of the African National Congress, in welcoming the delegates said: "It is my contention that no matter where a man comes from, if he has made South Africa his home, then he is a South African. We want to live in co-operation with all in this country. We have come together to find ways and means of how we can fight this great fight which is before us....."

The Conference unanimously adopted the following resolution:

This joint Conference of the Executive Committees of the African National Congress and the South African Indian Congress and the representatives of the Franchise Action Council, convened at the invitation of the African National Congress, meeting in Johannesburg on the 29th July, 1951, having carefully considered the report of the African National Congress on the present political situation and its plan of action; and in particular realising:

(*a*) That the rising tide of Nationalist oppression against the people of South Africa has reached unbearable limits especially among the Union's non-White people;

(*b*) That the brutal enforcement of the inhuman and enslaving Pass Law and the further impoverishment of the African people by the policy of Stock Limitation and the so-called Rehabilitation Scheme and the recent legislation such as the Group Areas Act, the Voters Representation Act, the Suppression of Communism Act, and the Bantu Authorities Act, have caused untold misery and bitter resentment among the non-white people of South Africa;

(*c*) That the Nationalist Government in its mad desire to enforce 'Apartheid' has at every opportunity incited the people to racial strife and has attempted to crush their legitimate protests by ruthless Police Action.

This Conference declares its firm conviction that all people of South Africa, irrespective of race, colour or creed have the inalienable and fundamental right to participate directly, and equally in the Governing Councils of the State and in pursuance of this objective, this Conference welcomes the decision of the African National Congress and resolves:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

(1) To declare war on the Pass Laws and Stock Limitation, the Group Areas Act, the Voters Representation Act, the Suppression of Commission Act, and the Bantu Authorities Act;

(2) To embark upon an immediate mass campaign for the repeal of these oppressive measures, and

(3) To establish a Joint Planning Council to co-ordinate the efforts of the National Organisations of the African, Indian and Coloured peoples in this mass campaign."

Federal Plans for Africa

There have for sometime past been many plans propagated by Europeans to federalize the various countries of the African continent. In themselves these may be desirable. But the European purpose is so crudely manifest that even a foreigner is struck by it. Therefore, we are not surprised that the plan for the federation of Northern and Southern Rhodesia, sponsored by the British Government, has received no welcome from the native peoples. News sent out on September 7 last gives us some information about it :

The Memorandum presented to the British Colonial Secretary, Mr. James Griffiths, was issued on behalf of the Ndola Africa Advisory Council by the Council's Working Committee.

It said the proposals suggested a form of Federation which would give Europeans all effective political power and the natives only token representation.

The natives numbering over six million, compared with 169,080 Europeans, would have only four out of 35 Federal Parliament members.

The proposed protective measures were 'undemocratic' and similar measures had proved worthless in Southern Rhodesia and the Union of South Africa.

If the settlers had all the political power, the Federation was bound to result in discrimination against Africans. The natives would only agree to Federation if certain conditions were fulfilled.

These included: native representations in the Legislative and Executive Councils in proportion to population; native members of the Legislative Council to be given portfolios; immediate introduction of universal adult suffrage without changing the status of British subjects; nationalisation of all major industries; the 'Africanisation' of public services; and the out-lawing of all forms of colour bar.

European businessmen, on the other hand, told Mr. Griffiths that Federation would bring great economic advantages to Northern and Southern Rhodesia and Nyasaland.

Mr. Griffiths had met the Associated Chambers of Commerce and Industry of Northern Rhodesia and the Northern Rhodesian Master Builders' Association here on 26th August.

Mr. S. A. Hyatt, President of the Associated Chambers, told him that Federation would greatly increase the three territories' bargaining power—particularly in negotiating for an outlet to the sea. It would also offer a much more attractive field for over-seas investors than at present and would stimulate European immigration.

Mr. Griffiths said Africans insisted very strongly that land settlement questions should remain under the control of territorial Governments.

Immigration was closely linked with land settlement and there might have to be further consideration of whether the Federal or territorial Governments should control immigration.

Burma's Demand for the Andamans

A Burman businessman has started a stunt for the return of the Andamans to the possession of the Union of Burma. A labour leader before the last world war, a businessman after it, U Ba Hlaing has been a rather severe critic of the Burma Government's import policy. In an article in the *Burman*, entitled, "Whose Islands—the Andamans?"—he gave certain reasons why these islands should be part of Burma. "Burma has contributed a great deal to the development of the islands because a number of Burman convicts had been transported to these islands and even a civil servant of Burma acted as the Chief Commissioner for some time. These islands have all along been geologically and otherwise a part of Burma, although they were occupied and administered by the British as an administrative unit as part of India."

And on these plausibilities he bases his brief, and expects that "the powers that be" both in India and Burma would be able to give shape to U Ba Hlaing's brain child. Stranger things have been happening in modern power-politics, and the Burman businessman must pray for another world war before the thing he desires so much can fall into his laps. The Kuriles are an example in point.

Relations between Israel and Egypt

Egypt has been waging almost a lone battle with Britain. Her Arab League colleagues have been proving themselves to be weak reeds. And the only State that can help her is Israel against which Egypt along with other Arab States have been fighting an inconclusive war. It appears, however, that better spirit has been attempting to sweeten relations between Israel and Egypt. The following news sent from Cairo on August 10 last gives point to this hope:

> "Ahmed Khashaba Pasha, who was Egypt's Foreign Minister during the Palestine war, said today that he favoured a peace treaty with Israel 'taking into account the existing situation and in order to avoid further misfortunes.'
>
> "Despite Foreign Minister Salah el Din Pasha's recent speech declaring that the British Foreign Secretary, Mr. Herbert Morrison, had closed the door on Anglo-Egyptian negotiations, observers here linked Khashaba Pasha's peace offer with a possible change in the Egyptian attitude concerning Suez Canal restrictions.
>
> "Khashaba Pasha, Vice-President of the Liberal Constitutional Party, said that a peace treaty with

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Israel should be signed on two conditions. 'First, every Arab citizen who was driven from his country should be allowed to return, should be given back what had been taken from him, should be compensated for losses in property or money, and should be able to enjoy all civil and political rights on an equal footing with other citizens. Second, that a treaty of peace should guarantee Egypt well-defined and stable frontiers which will protect her against aggressive expansionist tendencies of Israel.'

"Khashaba Pasha added that the first condition was just and humanitarian; the second was necessary considering that Israel, 'in making her aggressions, took shelter behind the protection of great powers'."

The talk about Israel's "aggresions" should be taken with the proverbial grain of salt. To the world outside the cap lay rather on Khashaba Pasha's group of the Arab States which have not shown to any great advantage in the recent war.

C. S. Srinivasachari

One of the most notable of South India's historians has departed from this world. As Head of the Department of History and Politics in the Annamalai University—a position which he held for about 15 years since 1931—C. S. Srinivasachari had the good fortune of having opportunity to exercise his great powers. He has left five sons and his wife to mourn his loss. To them our deepest sympathy is tendered.

Born in a distinguished family in South Arcot district, Mr Srinivasachari had his education in the Pachaiyappa's High School, Chidambaram, and in the Pachaiyappa's College, Madras. Graduating in 1909, he joined the staff of the Pachaiyappa's College in the History Department. After 20 years of service there he was offered the Chair of History and Politics at the Annamalai Univertity.

The Indian History Congress elected him Sectional President in 1931 and 1939 and General President in 1941. He was elected President of the Oriental Conference (History Section) in 1940.

After retiring from the Annamalai University, Srinivasachari was for three years Principal of the R.D.M. College at Sivaganga. Shortly before his 61st birthday, he became Principal of the Pachaiyappa's College at Kancheepuram and retired in June this year. His numerous friends, students and colleagues issued a volume in commemoration of his 61st birthday.

Familiarly known as "Chicca", Srinivasachari's profound scholarship, versatility and genuine goodness made him an esteemed friend and a respected and affectionate teacher. Author of a number of books on history, he was always recognised in this country as one of its eminent historians. Among his well-known works may be mentioned: *The History of the Pallavas, A History of the City of Madras, Ananda Ranga Pillai, A History of Gingee and its Rulers,* and *Vignettes from the History of the Walajahi Dynasty of the Carnatic.*

Deb-Raj Roy

This benefactor of education in Assam has immortalized himself by his donation Rs. 1,00,000 to the Golaghat College. He was a self-made man who made good in tea business. And the authorities of the Golaghat College have done well to name it after the donor. May his soul rest in peace!

V. Ramaswamy Iyengar

Death took away from Madras journalism on August 22 last a veteran who was known to his readers as 'Vara,' as he had written all his articles with the initials— VA and RA. A consistent nationalist starting his life-work in the spacious days of Mrs. Annie Besant, he specialized in Tamil journalism and soon came to the front. We tender our condolence to his bereaved family.

V. R. Kalappa

On August 29 last passed away at Nagpur a leader of the Labour Movement. He was a member of the Central Assembly, and he should have had years more to work for progressive movements. But he died at 53 only. Nagpur shared with Bombay the honour of being the centre of Tata activities; and it was there that this Labour stalwart did most of his work.

Surgeon Voronoff

This Russian surgeon known popularly as the 'monkey gland specialist' died at Paris on September 1.

Born in 1866, he found at Paris congenial soil for his special qualities. In 1917, he became Chief Surgeon of the Paris Military Hospital. Later he became director of the Biological Laboratory of the Ecole des Hautes Etudes. After some time, again, he became director of experimental surgery in College de France.

Dr. Voronoff's name will go down to posterity as one prominently associated with efforts at prolonging human life and rejuvenating the exhausted or declining physical frames so as to make old people or old animals young again sexually and in other ways. The method which he so successfully applied in this matter was that of transplantation of the sexual glands of young animals into the body of the patient under treatment. In the case of lower animals glands of animals of the same species were used. In the case of human beings, those of monkeys only were transplanted, successfully removing senility and making the old decrepit system manifest, temporarily though, both the mental and physical vigour of much younger individuals.

NOTICE

On account of the Durga Puja Holidays, "The Modern Review" office and the "Prabasi" Press will remain closed from 8th to 20th October, both days included. All business accumulating during the period will be transacted after the holidays.

HOW THE BRITISH LOST INDIA

Our gains and losses from British rule

By Dr. JADUNATH SARKAR, D.Litt. Hony. M.R.A.S.

England's dominion over India ended on 15th August, 1947 and India's destiny passed into other hands. This is the proper place for looking back, analysing England's work in its completeness, and striking a balance between our gains and losses. We can see in clear objectivity that the changes have been vast and varied beyond what could be imagined even ten years before Independence Day. Our political tie with Britain has been severed, but the forces set going by the British connection in our society, thought and life are still working: in these fields there has been no break-away from our immediate past.

Looking at the whole course of British rule in India, we cannot fail to see that a revolutionary change has been made by it in our society as it was 182 years ago when the English first assumed the administration of an Indian province (by the Diwani sanad of 1765), or even 89 years ago when India came directly under the care of those who governed England (by the Act of 1858). What have been our gains and losses during British rule?

On the credit side we have secured

(1) The formation of a secular State with equality for all irrespective of religion or race.

(2) Raising the labourers and peasants from a semi-servile condition to full citizenship.

(3) The growth of a vast and most influential middle class.

(4) Recognition of the principle that the true aim of government is to uplift the people by socialistic activity, and not merely to act as a "police-state."

(5) The rise of a capitalist class almost rivalling that of Europe in magnitude and capability. The mere accumulation of vast wealth in the hands of some Indians was known in the days of our Rajahs and Nawabs; but that wealth was kept buried underground. It is only when wealth in the mass is employed fruitfully in production and trade that it can be called *capital*, and this has been its use under Britannic peace.

(6) Women have been raised from a degraded status by the growth of public opinion supported by state action. The pernicious influence of a harem of kept women on the children has been removed, and at the same time the freedom and education of the women has doubled the effective man-power of the nation.

(7) In the caste system, which has been the supreme factor of Indian life since primeval times, disintegration is now at work. Its prohibitions and discriminations have been abolished fully in theory and a little in practice, but in the cities only.

(8) Provincial, linguistic, and sectarian differences of mentality are being ironed out, and uniformity of thought is advancing on the way to completion throughout India, thanks to newspapers, mass meetings, and a common type of literature in all our vernaculars.

But, on the other hand, Free India has to carry over an evil legacy, too, from her departed predecessor. This consists of—

(9) Over one-third of the Indian soil, the British have kept feudalism alive into the very middle of the 20th century. The primitive barbarism of the Nizam's Government (with 82,313 square miles and nearly 16½ millions of human souls to misgovern), the slothful, amorphous, defenceless political condition of Kashmir * (with about the same area but less than a quarter of the above population), the peasant-servitude and baronial tyranny obtaining in Rajputana *cum* Malwa (nearly 200,000 square miles and over 20 millions of people)—these will be remembered in history as a standing disgrace to a civilized suzerain who had dictated their Government for a century and a half. It will take Free India two human generations before Haidarabad or Kashmir can be brought up even to approach Madras or Bengal in modernisation, and that progress will be possible only if full sixty years of peace are granted by Providence.

(10) All separatist tendencies that oppose national union have been encouraged and the lines of cleavage widened by British policy.

(11) The Muslim community has been kept 50 years behind the times, thus paralysing one-third of the national body.

(12) The old home, based on the joint family, has been broken up. It is a world-wide phenomenon, due solely to economic causes, which have been intensified in the post-war age; but its effect will be felt in all aspects of our life and thought, for centuries to come.

(13) The feeling of exasperation against British rule roused among our people since 1905, and their sense of frustration and despair, have created a mental background most harmful to an infant State which has been suddenly called upon to grapple with the problems of complete independence.

---

* Lord Hardinge wrote about Maharaja Hari Singh of Kashmir in October 1912, "He used to be incoherent at certain times of the day until he had taken his opium pill, and he then became quite amusing." (*My Indian Years*, p. 73). This was before the Mrs. Robinson affair. And to a man of this type had been left the defence of life, property and women's honour when Pakistan troops and frontier Afghan tribes invaded Kashmir in 1947.

New middle class: its importance

The rise of a vast and independent middle class is the greatest of the social changes that the British period has seen. It is the natural consequence of the introduction of modern civilisation and new administration with their numberless branches of activity, advanced industries which require more than skill of hand, a more even distribution of the wealth in the country, and public education opened to all. The unseen but ceaseless pressure of British rule has flattened our hill-tops and elevated our valleys; our Rajahs and Nawabs have grown smaller and smaller and are fast hastening to extinction, while the labourers have been legally assured of their rights, their economic position has been raised beyond the dreams of their grandfathers and the path of their rise to the next higher grade made easy.

This new middle class, unlike their predecessors in the Muslim period, are not the creation of royal favour or baronial patronage; they have an independent status because they know that the work of the new Government and society cannot go on without them. At the top they are being frequently related to our blue blood, and at the bottom labourers' sons are every year rising up to merge themselves in this class by disavowing their ancestry.

Democracy cannot work without social equality, and social equality has been conquered by this vast middle class moving across Hindu society like a steam roller. This non-official middle class has been the life and soul of our political agitation and supplied all its leaders.

India's Military Strength kept under Suppression by Policy

The surest foundation of foreign rule over a country is the confidence of the people in the efficiency and honesty of their administration and its power of military defence. The alien rule must justify itself every day by its work, as it cannot appeal to the subjects' sense of nationality or religious unity, which may keep them tolerant of misrule by their own people almost to the extreme point. In all these respects the years 1941-47 marked the lowest depth reached by the British power in India, but it was the working out of inexorable forces which were inherent in the very nature of England's strange position in India, and which no human contrivance could alter. Statesmanship and goodwill could have smoothed the rupture, but had not the power to prevent it.

A handful of Britons could administer India and a cabinet sitting in a small island four thousand miles away could direct the policy of this sub-continent without the full co-operation of its people, only if India was kept weaker by comparison. Under Lord Lytton (Viceroy from 1876 to 1879) the policy was openly launched for keeping the Indian people as weak as possible. First, the Indians were deprived of arms except under licence, but every European *qua* European was left free to carry arms. Even when licences were given to loyal Indians they were, as a rule, restricted to inferior types of fire arms and munition. The armies of the native princes were legally restricted in size, but even these could not use breech-loaders. Foreign travellers visiting Rajputana and Maharashtra laughed to see these heroic races still handling the long-forgotten muzzle-loaders. Even the sepoys in British pay were armed with the types of muskets discarded as obsolete by their white comrades in arms, and their training was perfunctory. For instance, at the battle of Maiwand (1880) General Burrows employed Jacob's Rifles, a hundred sepoys of which had never fired ball cartridges before, and these men were pitted against Ayub Khan's Afghans armed with the latest Russian rifled artillery.

British policy consistently negatived everything that could make the Indians strong in the modern world. The Franco-Prussian War of 1870 had proved that a nation in arms is superior to a permanent professional army however well-drilled, and that the officers needed by a hastily expanded army cannot be trained in less than three years. And yet educated Indians were debarred from commissions in the so-called Indian army. They were even excluded from the Volunteer Force. In my college days, I saw a jet-black Negro of Jamaica walking on the Esplanade of Calcutta and chewing a straw; he had the letters C.V.R. (Calcutta Volunteer Rifles) on his shoulder-strap. We saw how a foreign imported Negro could become a volunteer here, but not even the highest and most loyal Indian gentleman was entitled to work as an honorary defender of his home and women.

Muller, the Captain of the German raiding cruiser *Emden* during World War No. 1, had been third officer of the Calcutta Port Trust Volunteers during a previous residence in India, and thus learnt all the secrets of the channel from the Bay of Bengal to the capital of India.* No *native* could enter the Calcutta Port Trust Volunteer Force, because it was an eternal law of Nature that every white man *qua* white man was a friend of the British and every native of the country their potential enemy.

Sir Charles Elliott, when Lieutenant Governor of Bengal, Bihar and Orissa, took a keen interest in the health of Indian boys. He issued an order urging the holding of physical drill in our schools, with a note *military drill is not to be taught !*

During World War No. I, the Allies, almost overwhelmed by the German man-power, issued an appeal to the people of India to serve as volunteers in Flanders, but not as soldiers, only as mechanics, drivers, etc., and this appeal contained the explanation, "Every Indian who

* He could not utilise this knowledge, during his next visit, because when his *Emden* reached the head of the Bay, he picked up some floating Indians dead and on dissection found them infected with typhoid. So, he avoided this pestilential zone and bombarded Madras instead, as a return for British hospitality and camaraderie in arms of a few years back.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

volunteers will thereby free a Frenchman or a Belgian to fight as a soldier." In other words, Indians (other than professional soldiers), were fit to serve the Empire's cause only as coolies and not as soldiers. I still remember what feelings this circular roused among educated Indians at the time.

To what length British distrust of Indians could go was shown by another incident, which would have been unspeakably comic were it not for its tragic import to India. During this same First World War, France then at her last gasp, sent a call for volunteer soldiers (not mere coolies) to her Bengali citizens of Chandernagar (a small colony two miles by half a mile; near Calcutta). Eighteen Bengali Hindu lads cheerfully enlisted from that town. One Bengali lad of Calcutta, being keen on soldiering, mixed himself up with his cousins of Chandernagar (who were French nationals) and at first got enrolled. But Inspector P. Lahiri of the British Indian Police was on the watch there, he immediately pounced upon this lad, had him extradited, and dragged him back to Calcutta—as an enemy of the British Raj in the making ! *

The problem was not one of mere numbers. The astronomical figures of £. s. d. required in modernising India's armament could be collected only by a national Government, and a national Government was legally justified in refusing to vote the money, unless it could decide all questions of war and peace—as *equal* partners in the Empire—and keep the army of India under Indian control. This was the unanswerable argument used by G. K. Gokhale when he complained that over 45 per cent of India's revenue was eaten up by the army, and the Finance Minister replied that Japan spent 60 per cent of her annual revenue on her army and navy. Gokhale's retort was, "I am ready to vote 75 per cent for the army, if you will officer it with our own men and leave the foreign policy of the country in our hands, as Japan does."

Thus an *impasse* was created which only complete separation could resolve.

How England Intensified National Disunion

As the reign of Edward VII opened with the 20th century, British policy in India was driven into a frantic attempt to prevent the unity of the Indian people by widening every existing line of cleavage and creating new ones by political jugglery. In the 19th century the Muslims as a class had fallen fifty years behind the Hindus, by obeying their bigoted priests, who had preached to them that if they received modern education their souls would go to hell. Thus between 1830 and 1870 the Hindus not only recovered the ground that they had lost during six centuries of orthodox Muslim rule, but forged ahead in wealth, power, culture and share in the administration. The followers of the Prophet only dreamt and vainly sighed for the return of the days of their Nawabs and Padishahs. After the Sepoy Mutiny, Sir Sayyid Ahmad with infinite persistence and in the face of disheartening opposition from his own sect, tempted the Muslims to enter modern colleges and equip themselves for the free competition of the world.

And now under Lords Minto and Hardinge (1907-15) the Muslims were coached and guided to set up a separatist camp in order to counteract the Indian National Congress which was chiefly under Hindu and Parsi leadership. The turbaned Faithful were encouraged to boast that they were a martial people, a manly heroic race (*i.e.*, Asiatic *Herren Volk* or Nazis), while the subtle Hindus clamouring for Swaraj were only vakils and keranis, having brain power but no courage or inner nobility. The Muslims after 1905 continued to nurse their pride under official patronage, demanding "parity with the Hindus," and "our communal quota,"—"our special electorates"—without qualifying for life's struggle by hard toil in schools and factories or foreign study. Their artificially sheltered life, narrow and self-centred, spelt their doom, as soon as the British umbrella was withdrawn from over their heads.

Lord Curzon in his despatch recommending the partition of Bengal (1904) frankly stated that this stroke would have the merit of saving the English from hearing *only one political voice*, which meant that when the Bengali Hindus would next demand political rights for all the Indian people, they would be outvoted by "loyal Muslims" at Dacca and by Beharis in Patna. The Olympians of Downing Street nodded assent.

John Morley, once a prophet of radicalism, exulted in the official nursing of the Muslim League as a native opposition to the Indian National Congress; he wrote to Lady Minto, in October 1906, "The whole thing has been as good as it could be. It has prevented the critical faction here [in England] from any longer representing the Indian Government as the ordinary case of a bureaucracy versus the people." [Lady Minto, p. 47.]

When the Muslim League was set up on official props, there was exultation in the Viceregal Court at Simla (October 1906). A high official wrote to Lady Minto, "A very very big thing has happened today. A work of statesmanship that will affect India and Indian history for many a long year. It is nothing less than the pulling back of 62 millions of people from joining the ranks of seditious opposition." [*India : Minto and Morley*, by Lady Minto, p. 47.]

The next Viceroy, Lord Hardinge of Penshurst followed the same policy. After the Kanpur mosque riot (in which 16 persons were killed, 30 wounded, and 106

* The sending off of this squad of Bengalis was a scene of immense enthusiasm. After two centuries Bengalis were again going to fight as modern soldiers. Sir Ashutosh Chaudhuri (ex-Judge of the Calcutta High Court) and many other notables of Calcutta were present to bless them. I met one of these French colonial Bengalis at Darjeeling two years after the Armistice, and he told me that his squad had been sent to Verdun, when Marshal Petain halted the Germans there. If the British had not barred their Bengali subjects, this Chandernagar corps could have been eighteen hundred strong instead of eighteen only.

rioters imprisoned) he called a general meeting of the whole of the Muhammadan community and told them, "I was their father and they were my children, and as such I had the right to chastise them if necessary. This sentiment was received with shouts of applause"—because all the riot prisoners were released and the disputed land given back. [*My Indian Years*, p. 87.]

In 1909, W. S. Blunt, one of the noblest British friends of the Muslims, "regretted that in India the motive [of thus favouring the Muslims] seems to have been the encouragement of Muhammadan loyalty as a counterpoise to the Hindu movement for self-government." [*India under Ripon*, p. 298, note added.]

Alas! It was too late in the day to make the *divide et impera* policy finally succeed; the Indian Renaissance had already gone too far for that. The British had tried for years to "bolster up the Sick Man of Europe," and their present attempt to bolster up the Sick Man of India, met with the same fate.

Another arm of the same policy of splitting up the nation was the public exaltation of caste differences among the Hindus. Men to whom all blacks had been pariahs, now began to show a heart torn by anguish for the lot of the depressed caste Hindus. In Bombay and Madras, non-Brahmans were set up against Brahmans; in Bengal "Scheduled Castes" were listed and driven into a special "reservation" or political Ghetto of their own. Morley openly declared that the election of Muslim representatives by a purely Muslim electorate would only bring into the Indian legislature bigoted members, and yet he yielded that point. Ramsay Macdonald at the Second Round Table Conference held at Chequers declared that the filling of legislatures and public offices by free choice among all the people was the essence of democracy, and that communal reservation in these respects should be avoided, or if adopted (only in part) should be abolished after ten years; yet he too yielded. [This is on the authority of the Right Hon'ble M. R. Jayakar, who was present as a member.]

In the end these separatist tricks went the way that History shows such plans to have gone all over the world; but they left a lasting bitterness in Indian minds and put the Muhammadans back by another fifty years.

The Bitter Fruits of England's Selfish Policy

Thus a situation was created in which our British rulers considered India's weakness as England's gain. The inevitable consequence of such a public policy was to create in the Indian mind a conviction that England's distress was India's only opportunity. It was the Irish problem, but multiplied a hundred-fold, because it related not to one small corner of the British Isles but to an area as large as Europe minus Russia and a population one-fifth of the human race, and alien to the English in speech, race and faith.

If India's distress was England's opportunity, India's glory could not be England's glory. A Bengali Deputy Magistrate of some literary fame told Rabindra Nath Tagore that one day when he was talking with the Police Officer of Jorasanko thanah, on some private business, a beat constable came to the office door, saluted, and reported *Tin Lumber Daghi* * *Rabindur-Nath Thakur kal rat ko ghar pauncha*,—"Suspect No. 3 Rabindra Nath Tagore arrived at his home last night."

If it was really necessary to shadow the Nobel Laureate as an enemy of the British Raj, I cannot imagine what can be a greater condemnation of British rule in India. If it was not necessary, what are we to think of the wisdom of the British Governor of Bengal?

Those who had the honour of listening to the intimate talk of Gokhale, Lord Sinha, and Surendra Nath Mallik, know that with all their deep admiration for the British character and gratitude for the benefits of British rule, they finally despaired of India's political salvation ever coming from British hands. All people had lost their faith in British justice and the two World Wars destroyed their faith in British efficiency and invincibility.

The military disasters of Lord Lytton's Afghan War, the surrender of General Townshend at Kut (the greatest shame to British arms since Yorktown), and the unstemmed flight of British troops and administrators before the Japanese in Malay—destroyed the last remnant of belief in British power. The utter mismanagement and confusion that disgraced Lord Lytton's conduct of the Afghan War and Lord Hardinge's Mesopotamian campaign † showed that British control and personnel was no guarantee of efficiency. Belief in British honesty received its death-blow when the Munition Board scandal was pushed up by the Viceroy after World War No. 1. People asked themselves, Could Indians have done worse if they had been in power? The Indians at last discovered, to borrow Kipling's words, that the English were "Not god, nor devil but Man."

The sense of disillusionment was embittered by the step-motherly treatment of Indian interests. Frederick List in his *National System of Political Economy* advocated the nursing of infant industries in a country by protective duties and State bounties, and Bismarck implemented this policy in Germany. But in India, the British Secretary of State tried to strangle the Bombay Cotton Mills by laying on them a Countervailing Excise

---

* *Dagh* is an Arabic word meaning a brand put with a red-hot iron on the person of a criminal or slave. I still remember the slight curl on the poet's lip as he told me this story, adding, "I suppose the *dagh* still attaches to me in their dossier."

† The British Government sent to Mesopotamia *smooth-bore artillery* which had been laid aside in the arsenals of India for sixty years as useless, while the Turks used the latest German guns under Von der Goltz. On 29th April, 1916, the British-Indian garrison of Kut, 10,061 fighters and 3,248 followers surrendered to the Turks. *Eighty per cent of the prisoners died in Turkish hands*, the Britishers being about 3,000 and the remaining 10,300 Indians. (Authority: *Times Lit. Suppl.*).

Previous to this disaster, the British Indian wounded had died like flies, being crowded together in boats without medicines or medical attention. Nobody was held responsible for it. (Hardinge, pp. 134-135).

Duty. The argument used by Lord Salisbury in yielding to the clamour of the Manchester rivals of Bombay, have been called by an Oxford lecturer, C. J. Hamilton as disingenuous. † It is impossible to describe the harm which these duties did to the Indian people's faith in British justice. What Manchester gained, the Empire lost. And Manchester's gain proved illusory in the long run: the patriotic Indians took the vow to wear home-made clothes and to boycott British textiles; in 25 years this spirit spread to the masses. And the new Indian capitalist class, a pure creation of British rule, was antagonised and it henceforth made an alliance with the politically-active intelligentsia of the country. The Indian National Congress which was a charity-boy at birth, no longer suffered from lack of funds.

In the evolution of British India, a stage had now arrived when this country could not be governed from Whitehall, and yet it would have been worse still to leave the entire destiny of India in the hands of the British bureaucracy and white mercantile community with their few Indian *stooges*. It is surprising how little the authorities in England kept themselves informed about India and the Indians. Lord Curzon had sucked Maharajah Sir Madho Singh of Jaipur of several lakhs for his pet scheme, the Victoria Memorial in Calcutta. And yet he, when a Cabinet Minister after return home, wrote a personal letter to Sir Madho Singh by name, asking for another donation, at a time when that Maharaja had been dead for four years! Mr. Surendra Nath Mallik, when working in the India office, London, as a Councillor of the Secretary of State, was one day greeted by his Chief, Lord Birkenhead with the words, "How do you do, Maharajah?" The fact is that Mr. Mallik had a colleague in the Council in the Maharajah of Burdwan. No greater contrast can be imagined than that between Mr. Mallik and Maharajah Bijaychand in size, features and colour; but to the master of India's destiny one native was as good as another.

† *Trade Relations Between England and India*, p. 254.

Our Present Perilous Position

Finally, the greatest mischief done by the long-wavering struggle for India's independence against British conservatism, is that the first generation of Indians into whose hands Free India has fallen have acquired a distorted mentality. A class of professional politicians * has risen to power, and are only held back from doing incalculable mischief by the few giants at the top. A false sense of values has been preached to the electorate; to have been held in political detention by the British is proclaimed as a qualification for a ministership in Free India, and a coat without a collar is the symbol of true patriotism. A tie? good God! it is the badge of a slave of the English. Honest constructive workers for the people's true uplift are taunted with having made no sacrifice compared with the white cap patriots. Our old readers may remember the late Ramananda Chatterjee's apt remarks on this point. Patriotism of this type is sometimes cashed in to found bogus joint-stock banks.

But all these will pass away if only kind Heaven vouchsafes to us fifty years of peace and strong and wise hands at the helm of our Government. Then England's marvellous achievement in India will be appraised in a just balance,

in calm of mind, all passion spent.

* "A professional politician is a person who has no ostensible livelihood except his political status."—Note in the Memorandum submitted by the Government of Bihar to the Simon Commission.

SONG IN KHEYAL

By CYRIL MODAK

In the stillness of dusk on my heart lean thy cheek,
On my heart lean thy cheek,
And unfold in shy glances the message I seek,
In that language that only fond lovers can speak,
Sad, glad lovers can speak
Lovers can speak.

Let thine arms cling about me like tendrils of vine,
Like tendrils of vine,
Like the whisper of leaves let thy life speak to mine
Of that haunting, mysterious, dark secret of thine,
Dark, sweet secret of thine,
Sweet secret of thine.

Not mine ears but my soul shall attend ever nigh,
Shall attend ever nigh,
Not my lips but my joy-lipped devotion reply,
Not in words, dear my Love, with a kiss and a sigh,
And a kiss and a sigh,
Kiss and a sigh.

Put the flute of my self to thy lips young and fair,
Thy lips young and fair,
That thy breath may breathe life in what died thro' despair,
And its silence shall break into paeans so rare,
Into paeans so rare,
Paeans so rare.

APPEASEMENT BIRDS COMING HOME TO ROOST

Clenched Fists *Vs.* Folded Hands

By C. L. R. SASTRI

"How far then, Catiline, will you abuse our patience?"—Cicero

The lot of the political writer—especially if he is a political writer on a monthly, not a daily or a weekly—is a very unenviable one: by the time his article appears in print the news may become utterly stale and, at whiles, even false to the pattern of events that emerges ultimately from that canvas over which the Moving Finger traces its indelible outlines. I have often encountered this difficulty while writing in the columns of *The Modern Review*, and not least while writing now when no one can claim to know positively the final outcome of the rapidly increasing tension between India and Pakistan. For a few tense moments it nearly seemed that war was imminent and that the Congress's appeasement chickens were on the point of coming home to roost—to a very sanguinary kind of roost, indeed. In addition, there were all those wires of nerves between the two Premiers—wires that were, as the late Mr. G. K. Chesterton happily remarked of the rolling sentences of De Quincey, "lengthening out like nightmare corridors or rising higher and higher like impossible eastern pagodas."

The Clenched Fist Relaxes a Little

We heaved a profound sigh of relief when, at long last, the Nawabzada closed his telegraphic correspondence with the Pandit, and closed it with the same appealing air of injured innocence in which, a month or so ago, he had commenced it. That the war clouds, though lowering menacingly, did not actually burst even after the firing of that final epistolary shot was a welcome indication that our exceedingly loving and courteous neighbour was, perhaps, still waiting for an unmistakable signal from her Anglo-American friends to precipitate hostilities. Probably second thoughts had begun to assail the minds of those friends. With Korea acting as a stern warning to them they might well have been considering the feasibility of going slow for the nonce with fresh adventures: Mr. Liaquat Ali Khan, for all his clenched fists and flashing eyes, might, when put to the test, prove to be no less a catastrophic liability than Dr. Syngman Rhee and Generalissimo Chiang Kai-shek. I am far from suggesting that the lesson of Korea has been thoroughly learnt by these much-vaunted "democratic" Powers. Had it been learnt properly the fateful Kaesong parleys would not have dragged on as they have done so far, nor would they have been continually threatening a serious deadlock. America, in particular, is "all out" to exterminate Russia and its satellites—the only factor deterring it from that frightful resolve being the equally stubborn determination of the Kremlin and its "fellow-travellers" not to allow themselves to be so exterminated, even for the laudable purpose of thereby facilitating the process of "democratising" our entire mundane planet. Obviously, the Soviet and its minions do not know what is good for them and the world at large although Messrs. Truman and Acheson (with the backing of their full military might) have been only too willing to point it out to them for the last ever so many months and years.

Pakistan Very Much in the Anglo-American Picture

I have always maintained in these columns that Pakistan is the "blue-eyed boy" of Britain and America: it would have been that, of course, even if sundry strategic considerations (the only considerations that have any sort of validity now-a-days) had not so miraculously supervened in its favour. Pakistan and foreign friends have grown in beauty side by side. I am not suggesting that, literally, they have filled one home with glee: it is, however, my firm conviction that they have contrived to fill a fair number of homes with glee. They have mutual bonds of self-interest: something deep in the one calls to a corresponding deep in the other. Besides, they have—or imagine they have—a common enemy in Hindu India (which is the only real India). But, unfortunately for us, strategic considerations have also supervened, "making the gruel thick and slab." Pakistan is a vital link in the extensive chain of the Anglo-American defence (as well as offence) system; and these Western "democracies" naturally feel that, Communist extirpation being their sacred mission, the far-off divine event for which the whole creation is evidently moving, Pakistan must, at any cost, be coaxed and cajoled and cosseted by them as against the "Bharatiya Bania"—the amiable Pak Radio's endearing nomenclature for the Hindu citizen *pur sang*.

Cause Greater than Questions of Right and Wrong

Thus it has come about that these Western stalwarts have been deeming it their bounden duty to sponsor Pakistan's cause as against India's through good report and bad, and irrespective of the hour and the season. In this simple and estimable scheme of things such paltry questions as what is right and what is wrong inevitably fail to find a place—much less a conspicuous place. They just do not exist. They are not regarded as existing because they are not supposed to be serviceable to *the cause*. Judged by a strict code of conduct they know as well as anyone else that Pakistan is, and has been ever since this spot of bother was [illegible] on the world's attention through our

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

country's earnest (and imbecile) appeal to the United Nations four years ago, not only wrong but *tremendously* wrong—*wrong as wrong can be*. It must be said to the credit of these Anglo-Americans that they are no double-distilled idiots and that if they cannot see a needle in a haystack they can see the haystack all right—provided that it is repeatedly pointed out to them. Pakistan's aggression in Kashmir was not comparable to a needle in a haystack: it was the haystack itself—with a capital "H." It was as large as life—some are prepared to aver that it was larger than life. Even so it took a deal of pointing out on our part; but in the end, the champions of "democracy" were not averse to acknowledging (tardily) that Pakistan was (in a vague sort of way) guilty of aggression against India. Our task, to be sure, had been lightened considerably by Pakistan's own belated admission, when pushed into a tight corner by the cross-examination of the United Nations' Commission, that it had, in the first instance, assisted the tribal hordes in their barbarous depredations on Kashmir and, in the second, had, at a later stage, itself actively participated in them. Further confirmations poured in during successive stages of these protracted investigations and the coping-stone was laid on this incriminating edifice by no less an authority than Sir Owen Dixon himself, the first Mediator in the affair. If there ever was such a thing as piling Pelion on Ossa this was it—beyond a shadow of doubt.

Circumstantial Evidence

All this irrefragable evidence against Pakistan was, however, of no practical benefit to us: circumstances, we are told, alter cases, and what would have been unmistakable aggression, aggression with a stamping iron heel, if Pakistan had been Korea almost ceased to be aggression because Pakistan is—well, so patently not Korea. "My face is my fortune, Sir," said the maiden in the story. Pakistan may likewise boast that the Islamic complexion of its country is its "bull point." That Islamic complexion has immunised it against the consequences of its dastardly aggression in Kashmir. It has acted as a powerful talisman. It has served as a potent shield against the shafts of retributive justice. After prodigious delay—contrasting glaringly with its lightning-like speed in Korea a year ago—the authorities at Lake Success (or their duly appointed representatives) were forced, by the sheer weight of evidence at their disposal, to acknowledge the extremely dubious part that their protagonist played in the Kashmir affair. There is, after all, such a thing as circumstantial evidence, and some circumstantial evidence, as Thoreau noted long ago, is very strong, "as when you find a trout in the milk." I am afraid that some *other* circumstantial evidence is also very strong, as when you find a Pakistani soldier in Kashmir; and that circumstantial evidence, it goes without saying, becomes enormously strong, indeed, when, instead of one Pakistani soldier, you find whole battalions and brigades of them.

Just One of Pretty Fanny's Ways

Pakistan initially denied, before the world organisation that it had any part in the Kashmir imbroglio. That, clearly, was due to sheer modesty: even in these days of blatant publicity, of high-pressure salesmanship, no evil-doer cares to blazon forth his wickedness so openly. Truth will out one day: why, then, so the argument runs, should we, by our gratuitous affirmations, try to hasten its divulgence? Pakistan, probably, argued also that it was the business of the UNCIP to unravel the tangled skein of Kashmir happenings and that it would be a veritable shame to take that business out of its hands by owning up to its guilt before that unravelling process was completed. The UNCIP duly unravelled the tangled skein and discovered that the spider that wove that complicated web was none other than its own foster-child, its own cherished darling. But it must be said to the credit of the UNCIP that it did not, as some others in its predicament might have done, throw up its hands in righteous indignation on account of that discovery: it was made of sterner stuff, and did not so much as bat its eyelids, feeling, evidently, that it was just one of pretty Fanny's ways, that a newly-created Islamic State *must* have its high-jinks, its exalted moments, before it simmers down to the disgusting drabness of life. So it studiously refrained from doing anything beyond merely mentioning in one of its resolutions that the presence of regular Pakistani troops in Kashmir constituted "a material change in the situation." The resolution runs as follows:

> "The Security Council resolution of April 21, 1948, which sets forth the terms of reference of the Commission, was adopted *with cognisance of the presence of Indian troops in the State of Jammu and Kashmir*. The presence of *Pakistan troops* in Jammu and Kashmir, however, *constitutes a material change in the situation*, inasmuch as the Security Council did *not* contemplate the presence of such troops in that State, *nor was it appraised thereof by the Government of Pakistan*. The Commission cannot accept the statement in the memorandum (submitted by Pakistan) that the Commission's description in this respect is one-sided and inadequate." (My italics).

Pakistan's Admission

Pakistan's guilt was brought out plainly when, in answer to the questionnaire placed by the Commission before its Government on August 4, 1948, its Minister for Foreign Affairs, Mr. Mahommed Zaffarulla Khan, confesed that the Pakistan army was, at the time, in the over-all command of the Azad forces. Further, during the *expose* made by the High Command of the Pakistan army on August 9, 1948, it was stated that the Azad Kashmir forces were operationally controlled by

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the Pakistan army. Pakistan's aggression in Kashmir is a clear violation of the U. N. Charter by one of its own adherents. The Charter says explicitly:

> "We, the peoples of the United Nations, are determined to establish conditions under which justice and respect for the obligations arising from treaties and other sources of international law can be maintainted, and, for these ends, ensure, by the acceptance of principles and institutions of methods, that armed forces shall not be used save in the common interest."

As for India, it put itself absolutely in the right by performing the normal obligations of a State by resisting the aggressor within its boundaries. The Security Council admits this without any mental reservation. Its resolution proceeds to state:

> "Pending the acceptance of the conditions for a final settlement, Indian forces, as provided for in Part II B2, will assist the local authorities in the maintenance of law and order."

This is proof positive, if such were needed, that the Security Council fully recognised the sovereign rights of India over Kashmir. By not withdrawing its troops from Kashmir Pakistan violated the terms of the UNCIP resolution. But the Security Council has not deemed it fit to admonish that errant country: on the contrary, it has, with a view to placating it, passed a new resolution that is diametrically opposed to its previous one. For far less—*if anything at all*—Korea has been reduced to shambles. It is only too true (is it not?) that while, as the adage has it, one may steal a horse, another may not even look over the hedge!

Pakistan Virtually Condoned

There is an article in the UNO Charter which prescribes to the Security Council the course of action it should follow when such a violation of its resolutions takes place. It reads:

> "The Security Council may decide what measures not involving the use of armed forces are to be employed to give effect to its decision, and it may call upon its members to apply such measures. These may include complete or partial interruption of economic relations and of rail, sea, air, postal, telegraphic, radio, and other means of communication, and the severance of diplomatic relations."

But, of course, nothing of the sort had been done in regard to Pakistan: what *was* done was to pamper the guilty one all the more and further to queer the pitch for the aggrieved party. UNO has reduced itself to such a pitiable farce nowadays! It is completely subservient to the United States, and to the United States everything is subservient except the exigencies of the cold war between itself and Russia. As I have already indicated, Pakistan's actions are not being seen in the dry, clear light of reason but in the prismatic hues of international diplomacy, to which highly questionable touchstone every controversy is brought at some point or other in the protracted proceedings.

This is because in the overheated imagination of Uncle Sam there is, at present, only one topic under the sun, and that it this cold war between his own country and the one that pulls the strings from behind the so-called Iron Curtain. If there are other topics they jolly well have to toe the line of that principal one or go under; and Pakistan's aggression in Kashmir—aggression that has been tacitly acknowledged by the UNCIP—is one of those "other topics" that has to toe that line. The consideration that applies here—of toeing the line, that is—is whether, irrespective of the merits of the dispute (which, incidentally, are made to appear as though they do not matter a thinker's curse), the interests of America, so far as this cold war business is concerned, are appreciably advanced: that, and none other, is the preposterous yardstick.

On Being Astute

Mr. Liaquat Ali Khan is an astute politician—they are all astute in Pakistan—and in his latest correspondence with Pandit Nehru has not been slow to capitalise on this extreme good-will of Britain and America towards his country. One can afford to be astute—very astute, indeed—if one has no scruples, inhibitions, complexes, what you will: one can afford to be astute—very astute, indeed—if one has only *one* object in life and if, further, one is hampered by no crippling ideologies in one's pursuit of it. In our unfortunate land, however, things are a little bit different. We lack that single-minded devotion and that resolute purpose: in addition, we are hamstrung by our own silly slogans. The Muslims desperately wanted a "homeland" of their own: the Congress ultimately granted it to them, though not without misleading our countrymen till the bitter end into thinking that it would rather perish than grant it. Some people did perish—mostly old men and women and children—in the process but not a single hair of a single politician that had no compunction in betraying our beloved Motherland had been hurt. Besides, thousands of our young women were dishonoured in every possible fashion. But we soon got used to these unspeakable humiliations, telling one another that, obviously, the road to independence *via* partition was paved with them, that every noble enterprise has its appropriate price, that you cannot make omelettes without breaking eggs.

But that was not the end of the story. Something worse was to come. Having gleefully partitioned our country our Congress friends—with that exemplary large-heartedness which has always been their special distinction—decided to make our portion of the old undivided India thoroughly "secular." In the old days—that is, before the advent of the Gandhian Congress on the political scene—one would have surmised (and rightly) that if, in undivided India, the country was a composite one (though, to be sure, with a preponderating Hindu majority), in divided India one portion, being Muslim, the remainder would, as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

unquestionably, be Hindu. But nothing of the kind happened, and, having presented the Muslims with a "homeland" of their own, our new "Ma Baps" saw to it that the poor Hindus did not get one of theirs. The Hindu has no country that he can call his own *exclusively*: he is a helot in Pakistan—when, that is, he has not been ruthlessly driven out of it—and in India he is just one among members of several communities. The Muslim has two countries, the Hindu has not even one. That is the bare truth about the evil legacy of partition *vis-a-vis* that modern orphan of the storm, the Hindu. The precious identity of the Hindu has been swamped and submerged by a massive tidal-wave of "secularism," the like of which has never been witnessed anywhere and at any time.

Topsy-Turveydom

To come back to Mr. Liaquat Ali Khan, he had, to be perfectly fair to him, been born extremely astute; and has been becoming astuter with every passing day, what with having, as I have already hinted, no inhibitions of any kind (as we, on our side, have) and with the British and the Americans vying with one another in showering sympathy on him and on his country, sublimely regardless of the rights and wrongs of the Kashmir dispute. We, on the other hand, thanks to that "putrefying albatross," appeasement, that our Congress Government has clamped on its neck, have to watch our steps very carefully lest a single false one render us open to the accusation that we are "narrow-minded," "parochial," "communal" and so forth. It is astonishing the twist our Congress leaders have given to the term, "communal." Those Hindus who bemoan partition and its repulsive brood of consequences and are not afraid of espousing the Hindu cause—seeing how tragically it has suffered, and continues to suffer, at the hands of Congressmen—are, it is being told in Gath and bruited about in the streets of Askalon, "communal": that is, those of us who have always stuck to our glorious ideal of a united India and have set our faces like flint against the disruptionists in our midst: whereas Congressmen, who have always been extravagantly partial to these same disruptionists and who, ultimately, presented them with Pakistan on a silver platter are supposed to be unexceptionably "national," untainted in the least by the virus of any vicious "ism." It is a merry game the Congress has been playing with our unthinking countrymen, and still goes on playing, and there, apparently, is no end to it—none, at any rate, that I, for one, can, at the moment, visualise. Those who pandered to the outrageously "communal" slogans of the Muslims—to wit, the Congress "high-ups"—are, it appears, commendably "non-communal": while those who consistently upheld the "non-communal" ideal are, it would seem, arrantly "communal"! This is the lop-sided logic that is now reigning in the counsels of the country!

"Clenched Fists": A Form of Self-expression

Small wonder that Mr. Liaquat Ali Khan has been becoming bolder day by day: this half-portion of a man has been steadily bloating himself to the dimensions of a veritable giant—with the giant's "thews, stature, bulk and big assemblance." There is no dead wood, in the shape of slogans and ideologies, to be hacked out of his path: he takes his rides along a smooth and ashphalted esplanade; and all the time he is certain that his Anglo-American friends will be cheering him on from the wings, so to speak. A happy man, if ever there was one: so happy, indeed, that every now and then, he is impelled to express his gaiety of spirit by clenching his fists at the "Kaffirs" beyond the border. When he clenches his fists we are to understand that his happiness is boiling over. Had he been a poet he would, of a certainty, have poured forth his soul

"In some stretched metre of an antique song."

Being, however, only a politician he has to content himself with clenching his fists. Some, similarly circumstanced, have been known to cock a snook at their enemies. The mode of self-expression, obviously, varies with the individual. It is his misfortune, not his fault, that Mr. Liaquat Ali Khan has chosen to clench his fists as the only "way out," in a phrase immortalised by our Rajaji a few years ago when he was labouring hard for the creation of Pakistan. We, on our part, have reacted to that belligerent gesture by folding our hands. A soft gesture turns away wrath—does it not? Can, for instance, anything be a softer gesture than this? At long last our Government awakes to the latest exodus of Hindus from East Bengal: an exodus fully as tragic as any of the previous exoduses. This exodus began some two or three months ago. But it was *only on August 18* that our Government was able to screw up its courage to the sticking place and to lodge a mild protest with Pakistan about it; and how mild that protest was can be gauged by these words:

> "The Government of India has asked the Governments of Pakistan and East Bengal to look into 'these vital matters' urgently, *not in a spirit of controversy*, but with the object of allaying, at the earliest possible moment, the nervousness and sense of insecurity felt by minorities in East Pakistan." (My italics).

Principles Come in the Way of Protests

It will be noticed, in the first instance, what an unconscionably long time our Government usually takes even to lodge a protest against Pakistan and, in the second, what a sickeningly innocuous form that protest takes when, somehow, it does get itself lodged. This, I need hardly remind my readers, is in striking contrast with the policy of our loving neighbour which makes the welkin ring with complaints against us even where

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

no ground for such complaints exists. Probably this is "secularism" with a vengeance: it may well be that it militates against our reputed principles if we draw the attention of our *vis-a-vis* too often and too minatorily against its acts of omission and of commission with respect to the Hindus still living within its borders. So our rulers elect "to sit upon the matter" till the urgency has departed from it and cobwebs have begun to be spun over it.

"There is no hurry in their hands,
No hurry in their feet."

They have, obviously, not profited from experience: nor is there evident in their political philosophy any undue solicitude for the welfare and security of their kinsmen and kinswomen across the border. They have set an ideal before themselves (a very mistaken ideal, as it happens) and it takes precedence over the welfare and security of their kinsmen and kinswomen not only across the borders but also within them. Even after the Nehru-Liaquat Ali Pact of April of last year there has been no dearth of Hindu migrations from East Bengal and, recently, those migrations have assumed serious proportions; *and all that the authorities here decide to do in the interests of those Hindus is to lodge a belated protest and, while lodging it, to assure the guilty ones that "it is in no spirit of controversy" that they are doing so.*

I am certain that "secularism" can no further go. It passes my comprehension how, in these circumstances, the interests of the minorities in Pakistan can be safeguarded. Nor, of course, have they been safeguarded so far. In any other country, the Government that could not, or would not, protect its kinsmen and kinswomen in another would have been driven out of office long ago; it is a sad commentary on the toughness of fibre of our people that the Government is still in the saddle. The people themselves are inhumanly apathetic to the welfare and security of their kinsmen in Pakistan: after all we get the Government we deserve. We deserve no better Government because, as I have already hinted, we lack the requisite toughness of fibre, moral as well as physical: we are, verily, like the limp rags of Rudyard Kipling's apt description that no buckram can stiffen.

Poor Publicity and Late Publicity

I should like to linger a little over this matter of our Government's habitual delay and lukewarmness in bringing our complaints, not only to the notice of Pakistan (the guilty party), but also to the notice of the world at large. Our Government is both incompetent and inhuman—inhuman, that is, towards its own people, though overflowing with the milk of human kindness so far as the Muslims are concerned. Some time ago three villages of Assam were occupied by the East Bengal troops. After 48 hours or so New Delhi came out *with an apologia for Pakistan*! Those three villages, it would seem, are only *disputed* territory. New Delhi was in so much of a hurry to rush to the rescue of Pakistan that it forgot for the nonce that Pakistan troops have no more right to occupy disputed territory than they have to lay hands on Indian territory. Then some further clarification of this elucidation was provided in Parliament: all the three villages were not disputed territory: one or two were Indian. If a protest was made to Pakistan by New Delhi it was *after* these elucidations and clarifications, not before them. Of course, our worthy Parliamentarians were completely satisfied with the Government's statement. They did not care to ask the powers-that-be why no protest had been made to Pakistan earlier, nor why it took upon itself to be the apologist of Pakistan.

New Delhi Misses a Golden Opportunity

Take, again, that matter of our massing our troops on our borders. We were not told that there was such a massing of our troops. We were not told that there had been a rushing of a Pakistani brigade to the Poonch area in Kashmir and that we had no option but to be ready for any emergency—all the more so as the "jehad" offensive was steadily mounting in Pakistan. The Pakistani papers and the Pakistani politicians and the Pakistani people were concertedly waging a propaganda war against India, and, on top of it, there was this rushing of a Pakistani brigade to the Poonch area. That even such a weak and namby-pamby and apathetic Government like ours was driven to mass its army near the border is ample evidence that the situation had become well-nigh intolerable: the pressing of a button from Karachi was, evidently, sufficient to start a conflagration. There would have been a nice fluttering of dovecotes in the chancelleries of the world if, as soon as we got wind of that rushing of the Pakistani brigade to the Poonch area in Kashmir, we had given the widest possible publicity to it, especially in Britain and America where love and admiration for Pakistan run high and where they trip over one another's heels and fall over one another's necks in acclaiming old Liaquat's picturesque antics, which age cannot wither nor custom stale.

Liaquat Ali Khan Steals a March over Pandit Nehru

But did we? To ask the question is to furnish the answer. But over there in Pakistan they are not somnolent, and Mr. Liaquat Ali Khan, noting how sadly we missed our golden opportuntiy, smartly turned our missing it to his unique advantage and, neatly slurring over his rushing of one of his brigades to the Poonch area, warned his Western "democratic" allies that India had massed nearly its whole army on Pakistan's borders and was hourly threatening his country's security. His Western "democratic" allies, as usual, affected to swallow Liaquat's monstrous allegation against us and started lecturing us about our

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

moral degradation; they lectured our beloved Panditji in especial for having so soon forgotten his foster-father's celebrated teaching of *ahimsa* and brotherhood of man and universal love and charity, *et hoc genus omne*. Once more, it was evident, Mr. Liaquat Ali Khan stole a march over Pandit Nehru. Where the Pandit should have blazoned forth Pakistan's turpitude in trying to start hostilities any moment and his having, of sheer necessity, to concentrate India's armoured might on Pakistan's borders as an emergency measure to meet all eventualities, he left it to his opposite number in Karachi (by his tragic silence) to publicise a Bowdlerised version of events leading to that concentration calculated to damage India's prestige abroad as much as possible. The Pandit is no match for the Nawabzada—has never been, in fact—either in subtlety of intellect or in boldness of action and has been manouevred by the latter into the necessity of defending his concentration of troops on the Pakistan border: whereas, if he had played his cards properly, it should have been the Nawabzada who would have been obliged to justify his rushing of that Pakistani brigade to the Poonch area in Kashmir which made India's action inevitable.

Our Action Completely Justified

My readers would not have failed to notice that it was *only* when the Pandit had been driven into a corner, so to speak, by the Nawabzada that he revealed the reason for the drastic step he had taken in moving our army to the Pakistan border: namely, that initial rushing of a Pakistani brigade to the Poonch area. And the Pandit is a seasoned politician! The *Economist* of London is not, as a rule, friendly to India—very few British and American papers are, for that matter—but, in its issue of July 21, it was forced, by the sheer weight of logic, to take India's side in the dispute. Discussing "the alarming intensification of the Kashmir dispute," it writes:

> "There is little wonder that Mr. Liaquat Ali Khan, placed in a tragically difficult situation, in relation both to outside opinion and to his political opponents at home, seeks to focus attention on Indian military measures which, although provocative, no Government in Delhi could well avoid taking now in view of the menacing deterioration of the situation."

Even in Britain they see light now and then though, to be sure, they prefer to grope in darkness as far as India is concerned. This has been admitted in so many words by the *New Statesman and Nation* when, referring to the attitude of the *Daily Telegraph*, it says, in its issue of August 10:

> "The attitude of the *Daily Telegraph*" (it refers to the *D.T.'s* editorial of August 7 which sought to prove that if war began between India and Pakistan the blame would necessarily fall on Delhi) "too clearly confirms the view strongly held in Delhi that British conservatism is irrationally, passionately and dangerously wedded to the Pakistan cause."

Small Mercies

This weekly forgets that even the Liberal *Manchester Guardian* has been consistently and vehemently against India over the Kashmir question; nor has the *New Statesman* itself been uniformly in our favour. However, we should be thankful for small mercies, and we are thankful for what it proceeds to write in the same issue:

> "The incontrovertible facts are that the Maharajah of Kashmir acceded to India; that, in the case of Junagadh, Mr. Jinnah publicly committed himself to the view that the decision of a sovereign prince to adhere to one or other domininon was legally decisive whatever the views of his people; that India voluntarily offered a plebiscite: and that no Indian troops moved into Kashmir until the tribesmen poured through passes into the valley burning and pillaging as they came."

After referring to Mr. Denis Warner's (the *Daily Telegraph's* correspondent in Pakistan) account of fanatical preparations for war in Pakistan it declares:

> "The Indian press and public are calm and peaceful in comparison with their neighbours. If, as Mr. Nehru says in his appeal for reason and peace to the Pakistan Prime Minister, he feels it necessary to keep troops 20 miles away from the frontier beyond which such fanaticism reigns, who can be surprised or attribute to him 'primary responsibility' if Pakistan fires the first shot?"

It is not often that even these radical papers care to espouse our cause: that is why I have thought it proper to quote so freely from them on the rare occasions when they refuse to succumb to Pakistan's blandishments.

Instead of Playing up We Have Played Down Our Case

I have mentioned, in passing, how much our cause has gone by default owing to the deporable lack of vision and publicity on the part of our Government. Neither in England nor in America have the authorities deemed it fit to present our case as it should be presented. I am not suggesting that we should always have played up our case, though I fail to see what would have been wrong if we did. Actually, we have systematically played it *down*. We have, not seldom, hidden our light under a bushel. We have allowed Pakistan to do all the talking and writing: the initiative has always been with Pakistan. When we do rush into print it is only to defend ourselves against some of the more grotesque charges of our loving neighbour. I do not remember ever having come across any publicity work on our side that attempted to put Pakistan in the wrong: the little publicity work we have done has been to defend ourselves when Pakistan has tried to put *us* in the wrong.

Not that Pandit Nehru does not know the value of publicity. At the height of Indo-Pakistan tension he said at a meeting in Delhi (or was it on the floor of our august Parliament?) that what he was mortally afraid of was not the Pakistanis but our own "commu-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

nalists" (meaning, gentle reader, the Hindu Mahasabha and the R.S.S. and, I am certain, even some Congressmen like Purushottamdas Tandonji, the Rashtrapati himself, because he is not frightened out of his wits as our beloved Panditji is by the term "Hindu"). Instead of concentrating all his attention on Mr. Liaquat Ali Khan Pandit Nehru diverted it to spout on his old complexes. That, certainly, was not the time to rave at the Hindus: that was the time for him to rave at the Muslims. But though he has shown himself to be absolutely unpublicity-minded as regards Pakistan he has proved himself to be enormously publicity-conscious as regards what he chooses to term as the "Hindu communalists." During these critical days no pro-Hindu Hindu has made any public speech or issued any statement except to endorse Pandit Nehru's stand on the Kashmir issue; but the pro-Hindu Hindu is Panditji's King Charles's head and he cannot leave him alone: least of all when the Indo-Pakistan tension is at its height because it furnishes him with an excellent opportunity of waxing "secular." It is then that "secularism" is also at its height. Else note the following question and answer in Parliament on August 14:

> Mr. A. M. Rathnaswamy: "In view of the past history of the Muslim League and the strained relations between India and Pakistan, does the Government propose to declare the organisation unlawful?"
>
> Mr. C. Rajagopalachari: "The Government is inclined to allow *more and more* political activities on their part than reduce them."

"Secularism" moves in a mysterious way its wonders to perform!

Conclusion

To hark back to our woeful lack of publicity let me quote from Mrs. Taya Zinkin's article in the *Economist* of London recently on "India, Pakistan and the West":

> "There is much force in repetition: every Westerner, in any way connected with the East, has heard a Pakistani extol his case with burning conviction; the same Westerner has, perhaps, never heard the Indian case at all; he may have seen it in print, but if he has heard it, it has been put to him most certainly by a critical Indian whose own mind was not quite made up on the merits of the case. No two Indians will put the same emphasis on the same points, and the Westerner cannot be blamed if he fails to see light where light is hidden by shadows."

She proceeds:

> "Whereas the Pakistani case has been made clearly, simply, promptly, persistently, and convincingly, the Indian case has never been well made, it has always been made too late and the arguments used have tended to be obscure by the shifting of the arguments. *The fault presumably lies in the quality of India's publicity abroad.*" (My italics).

Our Congress leaders, I have always maintained, have, in their relations with Pakistan, been more eager to strike attitudes than to win points: no wonder Pakistan has been encouraged to beat the war-drum. Mr. Liaquat Ali Khan knows the mind of Pandit Nehru: he has taken the full measure of him. Pandit Nehru has not been able to repay the compliment: there lies part of our country's tragedy.

———:O:———

PROSPECTS OF DEMOCRACY IN FREE INDIA

By Dr. NANDALAL CHATTERJI, M.A., Ph.D., D.Litt.,
University of Lucknow

When India achieved her long-awaited freedom in 1947, many of us hoped that now we could at last settle down and enjoy the blessings of democracy in peace and without any further struggle. But, as a matter of fact, it has been increasingly felt that the battle of democracy is never finished and that it has to be won every minute, every hour and every day afresh. Eternal vigilance may or may not be the price of freedom, but democracy at any rate is unattainable without it. In a new State like ours, where our democratic ideas and experiences are still amateurish, new dangers and problems are arising which may shatter our infant democracy to pieces. To some extent, these dangers and problems are a reflex of the totalitarian epoch which confronts the world of today. But, these are largely inherent in the character of our social, economic system and our political evolution. Even in countries which are regarded as the custodians of democracy the actual practice of democratic precepts leaves much to be desired. We, therefore, in India, who are yet not much ahead on the road to democracy, have to guard against such trends as are the very negation of democracy.

Democracy is the catchword of every party and group in India, but that makes the position rather perplexing, for the catchword signifies different things to different people. Now that the general elections are approaching, a lot of political and philosophical jargon is being dished out in the form of rival manifestoes by leaders of all shades of opinion as the meaning of democracy which they visualise. It is indeed interesting to find that India calls itself fascist, and all

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

pose to be democratic. Even the most reactionary groups swear by democracy. The consequence is that the common man is getting bewildered by the conflicting implications of democracy as interpreted in terms of Sarvodaya, Socialism, Marxism, Co-operative Commonwealth, Ram Rajya, etc.

It is a pity that to most people in India as elsewhere democracy is still an electioneering platitude, and it hardly stands for a genuine faith in the way of life which serves to promote the growth of human personality and seeks to safeguard equality of rights. "Party in power and party in opposition and citizens voting for one or the other," is what democracy means to many people including politicians. But, that is not all, for that merely indicates the external machinery of democracy. It is the spirit which underlies the concept of democracy which is more important. This spirit is, however, yet in its infancy in India. There is a growing apprehension in the minds of many careful observers in India that a sincere faith in a democratic way of life which is vital to the moral and spiritual personality of every individual will not grow up easily in the situation as it obtains today. There are obstacles to the growth of the democratic spirit in all its fundamental aspects—its connotation of human dignity, its recognition of liberty, and its technique of discussion. The obstacles are manifold. Tyranny of majority rule may jeopardise the sanctity of human values, while party discipline and power-politics may hinder the liberty of thought and expression. That these dangers are not imaginary will be apparent to those who have watched the recent trends of political thought and activity in India.

The new constitution of India is doubtless democratic both in its objectives and structure, and is intended to promote constitutionalism in our country. But, there are certain questions which need to be answered before we can be sure of our position. Is not our constitution much too legalistic and status-quoite? Will it work in the absence of sufficient tradition and experience of parliamentarianism in India? Will it survive the onslaught of Socialist or Marxist ideology? Is it not conservative in tone? Does it really harmonise with our social and economic life? Is it the reflex of a finished revolution, or an incomplete one? Will it be conducive to the stability of government? Is it likely to discourage the age-old centrifugal tendency in Indian political life? Can it really lead to a classless society? Will its unduly composite make-up supply the necessary psychological fervour which alone can safeguard the common man's faith in democracy?

Questions such as these are not easy to answer. But, on these answers alone would depend the success of the Indian experiment in parliamentary democracy. There is no doubt that our constitution is based on the concept of a democratic state, but the functioning of democracy has not been easy anywhere in the world, much less in our country. It will be specially difficult in India because of the peculiar set-up of our socio-economic life. The difficulty will appear not so much in the application of the principle of secularism which permeates the constitution, but in the harmonisation of governmental authority and the rights of communal or religious groups. Again, the enforcement of justice, liberty, equality and fraternity in the midst of social, religious, economic and provincial differences and rivalries can never be easy. The acid test of a true democracy lies in the actual enforcement of these fundamental rights, and not merely in their outward profession. The political set-up in India is yet in a state of flux. Faith in democracy has not yet taken root in the mind of the average citizen. Communalism, provincialism and castism which are all an antithesis of democracy still vitiate our politics. Furthermore, political parties are still dominated more by personal and group loyalties than either national interests or democratic principles. Our constitution which is devoid of any ideological creed and which is more jerry-built than homogeneous will tend to encourage more of our present-day party-ism and conservatism than a dynamic resistance to collectivist authoritarianism.

Totalitarianism and communism are the twin dangers that lie ahead of our democracy which will be necessarily pitted against both. It is problematical as to how far our constitution will be able to withstand either or both of the two. There are certain features in it which may lead to totalitarianism. For example, the powers of the President are so extensive that these may favour party dictatorship. Unrestricted adult franchise is good in theory, but in the present conditions of India it may encourage class war and class dictatorship. Moreover, the recent encroachment on the freedom of expression is fraught with dangerous consequences. Immediately, the amendments to the constitution may not be of grave consequence, but there is no doubt that these may be misused in future. What is at present disquieting is not that freedom of expression is being indirectly controlled, but that freedom of expression is being regarded as an evil which can be tolerated within certain limits only. As a matter of fact, however, freedom of expression is vital to democracy, and democracy can not function without it. It is true that in the presence of treason from within and aggression from without strict vigilance is called for, but the crisis must be justified before restraints are imposed.

Liberty of thought and expression, so fundamental to democracy, cannot co-exist with a regimented Press. The Press is the greatest bulwark of modern democracy, and its role as the warden of popular rights is too significant to be ignored. The Indian Press has played in the past a memorable role in the history of our national movement, and it has set up on the whole

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

high traditions of independence. But, there are at present perils confronting the Press too. If it is controlled by powerful vested interests, it can never serve the cause of democracy. How the influence of such vested interests has of late begun to operate in the sacred realm of the Press is too well-known to need an elaborate mention. It is sufficient to state that such a contingency will be fatal to democracy. Besides, a collusion between the government of the day and the Press will be no less detrimental to the cause of democracy than the subservience of the press to particular vested interests or cliques. It is yet difficult to foresee how far the Press in India will be able to safeguard its cherished independence in the face of encroachments from the side of the governmental authority on the one hand and infiltrations of undemocratic interests on the other. All that can be hazarded is that the situation is not very hopeful, judging from the facts as they appear at the present moment. The honest votaries of the Press would themselves readily admit that it is becoming more and more difficult for the professional journalist to preserve his independence. If the Press completely succumbs to the diverse allurements or threats that are being bandied about, the cause of democracy in India will suffer an irreparable damage. We can at best hope that this eventuality will not materialise at least in the near future.

There is no gainsaying the fact that democracy can function only if the main parties are agreed on the fundamentals which include the integrity and independence of the state and the inviolability of the basic principles of the constitution. Is it certain that this basic agreement will continue in the changing international situation of the world? Will not the use of violence retard the growth of democracy? The man who killed Gandhiji acted on the dangerous assumption that it is far easier to destroy one's opponent than to convert him by means of discussion. A potential danger to democracy therefore lies in the resort to violence and intimidation by force. Democratic conventions will be nullified, if violence is adopted as a method of political activity. It is well-known that if a ruling party shows a totalitarian tendency, the opposition will necessarily adopt violent means to overthrow the government. A bloody revolution will not be thought of, if a peaceful change of government could be possible. It is, however, reassuring to find that practically every party in India has condemned violence as a method of gaining political power. Even the Communist party has made a declaration in favour of non-violence. Still, the future governments of India will have to exercise the utmost vigilance in the matter of detecting and eradicating this evil, for there can be no compromise between democratic practice and the methodology of violence.

But, violence will not totally disappear for the mere asking of it, or by merely paying lip homage to the philosophy of Mahatma Gandhi. The challenge to democracy in India lies in creating conditions under which mono-party dictatorship is not perpetuated in an unfair manner. Just at present, the Congress is the ruling party, but there is no effective opposition in our legislatures, and therefore we see the spectacle of a one-party state in India with all its concomitant evils. The part that the Congress played in the liberation of India fully justified its emergence as the sole ruling party in the early years of our independence when there was no other party organised enough to form the opposition. Parliamentary democracy, however, needs a government no less than an opposition. In fact, it is no exaggeration to say that there can be no democracy without an effective opposition. It is not for nothing that the British Parliament has provided for a regular salary to the leader of the opposition. The function of the opposition is as vital as that of the government. Parliamentary democracy of course works effectively under the two-party system which, however, is not attainable ordinarily. Even in England the old two-party system disappeared with the rise of the labour party. Under a multi-party system, parliamentary government works rather badly, though it may not break down altogether. But, it can not work at all in the one-party state which is bound to become totalitarian sooner or later. One-party rule and democracy are a contradiction in terms. In the long run, a one-party dictatorship will lead to a violent revolution, for a government of this type is too artificial to endure long. A strong reaction has already set in against the rule of the Congress not because it is basically wrong, but because there is no scope for a healthy opposition in the legislatures.

The cry of "country in danger" or "national unity" is put forward as the chief argument in favour of the continuance of unity in the ranks of the Congress. Unity is being regarded as more important than the growth of dissidence among Congress leaders. But, such notions of unity may be excellent in times of a grave national crisis like war or invasion. Such insistence on unity was essential when India was under alien rule, and when freedom had yet to be achieved. But, now that India is free, the Congress need not insist on an artificial unity among diverse and heterogeneous groups who had agreed to fight shoulder to shoulder against an alien government. With the disappearance of the alien rule, the need for an artificial unity no longer exists. The Congress as a national front is an anachronism in the new conditions of today. National unity will not be disrupted, if the opposition is agreeable to accept the fundamentals of our political system.

The students of modern Indian history need not be told that ideas of democracy and nationalism have

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

grown up side by side during British rule in India. In fact, often these two were regarded as inseparable and convertible terms. This was natural in the days of our political subjection. More often than not, nationalism presupposed a faith in democracy as well. The old school of Indian politicians never liked to think that the two could be possbile independently of each other. In any case, the stress on national unity in those days implied also a preference for democratic reforms. But, this has lost all its meaning in the changed conditions of today. It would be totally undemocratic in Free India, if the ruling party would either discourage or prevent the formation of opposition parties. It seems that the old habit of stressing national unity is still persisting even though foreign rule has ended. Nobody has any right, correctly speaking, to obstruct the growth of free democracy in the name of national unity. An all-party government is always possible, if there is a national crisis. Democracy in normal times does not require a glorified one-party national front. It would be a travesty of democracy, if it implied the obliteration of all differences of opinion and regimentation of all thinking on the plea that national unity must be maintained. The Congress would be stronger and more homogeneous, if dissidents go out of it and form other parties. It is high time now that the Congress transformed itself into a compact Parliamentary party with a definite programme of its own. Co-existence of contrary ideas accounts for the vagueness of the Congress ideology. This indefiniteness is causing confusion, and is a source of weakness as well. It is all to the good therefore that through recent defections the Congress has been vouchsafed a good opportunity for redefining its ideological creed and reshuffling its constitutional make-up once for all. If the dissidents are able to form a healthy opposition outside the Congress, so much the better for the Congress and also for the cause of democracy. So long as there is nothing basically wrong in the parent organisation, defections and splits are a blessing in disguise. They reinvigorate the parent body in a manner in which it would not have been possible otherwise. Loss in mere numbers would be more than compensated by the enhanced homogeneity of the organisation.

As the situation now stands, one may reasonably promise that there will be varying degrees of opposition strength in all legislatures, even though the Congress may retain its present vantage ground. But, what would this opposition be like? It is certain that it will be a multi-party opposition which the Congress will have to face, and, as such, the opposition will hardly be compact, stable or well-organised once the general elections are over and the election-time alliances against the Congress come to an end. The opposition will consist of Rights, Lefts and Centre parties. It is not unlikely that they will manage to combine against the Congress from time to time, or whenever it will suit them in any particular crisis. But, there is no doubt that such combinations can not be regular or homogeneous owing to the disparity in the aims and objectives of the opposition groups. The Hindu Mahasabha with its allied groups, even though it claims to stand for "real democracy" will belong to the extreme Right. The landlords' parties such as the one in U.P. will tend to be associated with the extreme Right. The K.M.P. Party will be reformist and democratic in its general methodology, but it will stick to the Centre and will be a counterpoise to the Congress. In any case, the K.M.P. Party will not be revolutionary in its outlook, though it may incline towards the Left of the Centre. The Socialist Party which has refused to accept the Russian form of Marxism lacks the appeal born of fanaticism distinguishing the extreme Lefts. As a consequence, the Socialists will be more liberal and democratic than the latter. It is not unlikely that in the long run the Socialist Party may break up under the strain of ideological differences, and that a part of it will get merged in the extreme Communist Left, while the rest will swing to the Left of the Centre or to the Right of the Left. The Congress as it now stands will remain conservative and reformist, and will not be revolutionary in its outlook. It will in fact incline towards the Right of the Centre. The other groups, barring the plutocratic, aristocratic or communal organisations, will usually move to the Left.

In the medley of parties, a stable democracy will be possible, only if all the Centre groups consisting of liberal, nationalistic and socialistic parties which are either opposed to the Marxian creed, or are unwilling to accept the whole of it combine against the rising tide of Communism. The Centre or near-Centre groups will at any rate remain democratic. The same cannot be said either about the Rights or the extreme Lefts, for their ideologies would easily make them susceptible to authoritarian ideas of either class rule or class struggle. It will be an evil day for democracy in India, if either the extremist Rights or the Marxist Lefts succeed in securing political power. But, the chances are that the Centre parties alone will form the government in India for some time to come, unless their hold is weakened by some crisis in the international situation.

The future of democracy in India is not as dark as it might appear from the foregoing analysis. Notwithstanding the fact that there are undemocratic features in our socio-economic system, we are temperamentally peace-loving and forbearing. All through the ages, we have tolerantly accepted other people's viewpoints and acted on the principle of give-and-take. We have never been a narrowly dogmatic people in any period of our history. Our spiritual background and our cultural outlook are favourable to the growth

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

of democracy in our country. The catholicity of outlook and the capacity for synthesis which have been the characteristic features of the Indian genius will tend to strengthen the cause of democracy. It is true that the path of democracy will not be easy and that there is no cause for excessive complacency, yet one can legitimately hope that democratic ideas and values will gain a new meaning and acquire a new content from the spiritual basis of our age-old culture. If India supplies the much-needed spiritual bias to the purely materialistic democracy of the West, a new chapter would be added to the history of representative government.

———:O:———

MINERALS AND WORLD WARS

By Prof. SUKUMAR MERH, M.SC.

The role which minerals play in World Wars, their influence on man's social and economic conditions that breed wars and also decide the final outcome of these wars, is not properly appreciated by people in general. But in fact, it is very effective and profound. From the earliest times down to the present day, the minerals and mineral products have played an exceedingly important part both in the development and in the destruction of various nations. Mineral industries have, many times in the past, been instrumental in determining the course of history, and promise to be of increasing importance in future also. Mineral resources cannot be confined to political boundaries. While some nations are richly endowed with various mineral deposits, the others are poor in that respect. But even those rich in mineral wealth are seldom self-sufficient in all the important minerals. It is because the formation and geographic location of mineral deposits have been fixed by some accidental geological phenomena of the remote past. Mineral resources of a country are called its "Wasting Assets." Once exploited they cannot be replenished. Because of their non-replenishable character, restricted geographic occurrence and their indispensability to certain industries everywhere, the mineral deposits have been responsible for various unique international problems. In fact, it may be justly said that the geological events which took place several million years back, have often been the ultimate causes of modern wars.

The material prosperity of a nation depends on its various manufacturing—agricultural or mineral—industries and trade. The essential factors for any industry are the raw materials, and the source of power, and both—raw materials and power—are largely dependent on mineral resources. Coal and petroleum are the universal source of industrial power, while the raw materials for most of the manufacturing industries are various 'ores' and other minerals. Even in the field of Agriculture and its allied industries, the importance of mineral fertilizers is great, for they are absolutely essential for the continued and improved productivity of the land. Evidently, therefore, the direct and indirect contribution of mineral resources to the national prosperity and strength is enormous. Productive and rich mineral deposits are the most valuable natural resources that a nation can possess; but such an asset may be coveted by other nations also, and so it gives rise to serious international problems. The eagerness of deficient nations for acquiring rich mineral deposits and the acquisitive spirit and greed of a few politically and industrially powerful nations to monopolize them have engendered conflicts very often culminating in bloody wars.

A study of the trend of world politics, particularly the role which mineral resources have played in wars during the last two centuries, makes an interesting reading.

The World War I (1914)

With the dawn of the 19th century, Great Britain had emerged as the richest and most powerful nation of the world, and she enjoyed this privileged position practically during the whole century. Her large deposits of Coal and Iron, together with Copper, Lead, Tin and Zinc proved to be profitable assets and she was the greatest producer of these essential raw materials. Great Britain's economy, based mainly on various manufacturing trades, brought in return food-stuffs and other necessities of life. But during the latter half of the 19th century, England found Germany to be asserting herself as a formidable competitor. Although Germany was late in her industrial awakening, yet under the dynamic leadership of Bismarck, she very soon emerged as an industrially powerful nation. By 1850, all the small 'Principalities' of Central Europe were unified in a single Germanic Confederation. Artificial barriers of tolls and tariffs being removed there was a regular flow of raw materials from one part of the country to the other, and the German nation plunged itself heart and soul in building up powerful industries by pooling up the scattered mineral resources of Coal, Iron, Manganese, Chromium, Aluminium, Lead, Zinc, Potash, Antimony, Mercury and Silver, etc. The annexation of the French province of Alsace-Lorraine in 1871 brought to Germany big deposits of Iron ores. With the coal from Ruhr Valley and Iron Ores from East Rhine districts and Alsace-

Lorraine, Germany expanded her heavy industries at an amazing pace, and at the turn of the century, she was world's largest producer of Zinc and Potash, one of the biggest producers of Coal, and had built up a flourishing Iron and Steel industry. Germany wanted good markets. While the English goods were finding a very good and favourable market in all the parts of her Empire, Germany's own colonies proved not so rich as to carry on a sustaining trade with the "Father-land." The German industrialists wanted other fields. So the tussle started culminating in World War I, which Germany ultimately lost.

Germany was defeated in the First World War not wholly on account of her mistakes in military strategy, but mainly due to the insufficient and limited supply of natural resources, which are always the backbone of military strength. On the other hand, the allies had under their possession enormous and unlimited supply of various raw materials, which sustained them and put victory in their hands. When in 1918, the Treaty of Versailles was signed, it was foremost in the minds of the victors that Germany be made as weak as possible in the matter of her industries, and so the first things to be snatched away from her were her mineral resources. Austria and Hungary, which constituted the Dual Monarchy prior to the War, were reduced to purely deficit agricultural states with some small low-grade Iron and Coal deposits. Alsace-Lorraine with its Iron ores was allotted to France. Rich deposits of Coal, Copper, Manganese, Silver and Iron went to Czechoslovakia; Yugoslavia got rich deposits of Bauxite (the ore for Aluminium), Zinc, Chromite, Lead and Antimony. Rich Mercury deposits went to the share of Italy. It was the intention of the Anglo-American group and France to exploit to their own advantage all these mineral deposits given to various small countries of Central Europe. This seizure of her precious mineral wealth was a severe blow to Germany. The vanquished nation had no other alternative but to bear this injustice for the time being. The pride of the nation was hurt and a feeling to strike back gradually gained ground.

The World War II (1939)

While in the First World War only England and Germany were the two prominent warring nations, during the Second World War, various other ambitious nations of the East and the West joined either camps.

After the First World War, America started rising in power. With vast mineral resources within her territories at her disposal, she soon accumulated wealth and became one of the richest and prosperous countries of the world. The Russians, too, after the establishment of their Soviet Republic made an amazing progress. The first thing which attracted the attention of the Soviet Government was the proper exploitation of their mineral resources, which would help them in building up various heavy industries. The Russian plans succeeded and she became powerful. The Anglo-American block became much worried about this growing strength of Russia, but they could do very little to check it. It was mainly because Russia was almost self-supporting in different raw materials necessary for her heavy industries and was not dependent on any outside country for the same. Although ideologically differing from one another, Britain and America, at a later stage of the last War, had to enter into alliance with Russia, when she was drawn into the conflict by the dramatic German attack.

Germany on her side had her two faithful allies, *viz.* Italy and Japan. The three nations had high ambitions for becoming first-rate world powers, but unfortunately they possessed comparatively small territories and meagre mineral resources of essential raw materials. Nevertheless, they had powerful and ambitious leaders as heads of their states. These leaders exploited the deep-seated fear of communism gripping England and America, which secretly thought it desirable to see a powerful 'Axis' block to balance the power of Soviet Russia. Thus Germany, Italy and Japan developed their industries and military strength also with the help of imported Iron-ores, Coal, Petroleum and other essential raw materials from America and British Empire.

It will not be out of place here to trace in short the trend of events which ultimately ended in the Second World War.

The French troops in 1923 suddenly attacked and occupied Ruhr Valley. Deficient France wanted Coal to smelt Iron ores from Alsace-Lorraine. This military action of France over Germany came when millions of Germans were dying of starvation and the whole nation was facing a total economic collapse. Germany could only express her helpless indignation and resentment at this injustice. However, the Ruhr Coal was again restored to them in 1924 by the League of Nations, because it was not much agreeable for the Anglo-Americans to see Socialistic France building up a big Steel industry. The ingenious German nation, though hungry and downtrodden, very soon improved her economic condition by building up various industries, most of which, in fact, depended on imported raw materials. German products found a very wide market and there were signs of prosperity. Then again came a period of economic collapse. All the nations, for protecting their own industries, discouraged imports of foreign goods, and there was again the difficulty of finding markets for German goods. German trade and economy suffered a serious set-back, and the ugly face of unemployment and starvation again appeared. It was during 1930-31, when the German nation was passing through its worst sufferings, that Hitler assumed the leadership of the country. To the people, he assured food, employment and an honourable status for Germany amongst the world nations. He repudiated the treaty of Versailles and established the whole German economy on a war footing. He declared that he wanted back whatever had been taken away from Germany by force. The fear of Communism again led Britain to allow Germany to repudiate the Treaty of Versailles, to build up a strong army, navy and air force and also to let Germany

occupy parts of Rhineland in 1936 and Czechoslovakia in 1938. But very soon the British people realised the dangers of German militarism, and when Hitler invaded Poland in 1939, the Second World War started.

During the nineteen-thirties, when Hitler was busy in strengthening Germany, his powerful friend Mussolini in Italy was also aspiring high about the future of his country. Italy's condition was more hopeless regarding mineral resources. Germany had Coal from which she generated thermal power as well as synthetic petrol to satisfy her emergency needs. Italy had neither Coal nor Petroleum. As Mussolini realized that this deficiency would prove a great handicap in case of war with England and America, he resorted to age-old expedient of force. In 1935, Italy attacked Abyssinia. This invasion was only to get possession of possible oil-fields there. But the conquest of Ethiopia (Abyssinia) was a great disappointment to Italy, because in spite of vigorous search for oil, no oil-fields were found. The venture proved a mirage only. Then the Italians invaded and conquered Albania, and there they got a thousand barrels of petroleum per day from Albanian oil-fields. Motivated by the same fear complex of Communism, in the case of Italian aggressions also, the British Government did nothing to stop this aggression of powerful military machine against helpless and innocent neighbours.The British people could not tolerate this injustice and they forced their Government to boycott Italian goods, and to place economic sanctions against Italy. But the Government again yielded to Mussolini's threats, and when Mussolini openly threatened that sanctions on petroleum would be considered by Italy as an act of war, the British Government allowed the British-owned Oil Companies to supply as much oil as Italy needed for her military campaigns. It was the policy of appeasement of this sort which swelled the heads of Mussolini and Hitler, who got encouragement in fulfilling their sinister designs of war-mongering.

In the Far East, similar efforts of Japan met with greater success. With very little of Iron and Coal, Japan built up a flourishing steel industry. Imports of deficient raw materials from other countries, mainly America, China, East Indies and Malaya, sustained various industries of Japan. Manchuria and China supplied Coal, the United States gave Oil, and China, Malaya and Philippines furnished Iron ores and other ferrous metal ores. With her industrial progress, Japan started aspiring to become world's most powerful nation. With the limited natural resources and depending on imported raw materials, it was not possible to achieve this goal. Japan realised this weakness and in order to be self-sufficient she started on a colonial conquest. As a first step towards the fulfilment of her aim, Japan attacked minerally rich territories of China. In 1931, Japan conquered Manchuria for her coal-resources. She got more Coal when Northern China came into her possession, and in addition, rich deposits of Iron ores were also made available to her.

The British Government again acquiesced in this aggression and did nothing in the League of Nations to check this Japanese expansion. She remained 'neutral.' Thus China was left helpless. So long as Japan had not aligned herself with the Axis powers, all her petroleum requirements for various industries and for her military operations against China were met by the United States. It was only when fighting flared up in Europe, and Japan made a common cause with the Axis powers, that the supply of oil and other minerals was denied to her. Japan was prepared for this eventuality. By her conquest of Korea, Manchuria and a part of China, she had enough Iron and Coal. As for Petroleum, she had already stored a large quantity of American Oil and in due course of war, she got hold of Dutch East Indies and Burma with their oil-fields. It is interesting to note that in early stages of the last War, Japan used American Oil against American soldiers.

It is evident that although the immediate causes of the Second World War were mostly political and psychological, yet those causes grew out of economic conditions, which in turn were profoundly affected by the distribution and control of important mineral resources.

Stock-piles and Substitutes

As soon as a war is declared, there is a total breakdown of normal trade between the two hostile camps of warring nations. The political alliances are, therefore, mostly governed by the consideration of needs in respect of raw materials, and both sides in the war choose their allies accordingly. However, there are always some essential raw materials, which are indispensable for carrying on the military campaigns, and the supplies of which are denied to the enemy. It is on account of this reason that for several years before the actual declaration of the last War, the hostile nations built up huge stock-piles of such deficient but essential minerals the supplies of which were expected to be cut off later on.

The stock-piling was the most terrible "secret" weapon of Japan during the last War, and the stock-piles of the deficient minerals that she built up in the years prior to War were much larger than the technical experts of the Allies estimated. Japan had accumulated enormous reserve stock of Crude Petroleum, Manganese, Chromite, Copper, Lead and Zinc, etc. Germany had also built up big 'stock-piles' of these industrial minerals. But unlike Japan, she did not rely totally on reserve stock. The Germans carried on continuous and vigourous researches for finding out substitutes. Very soon after Hitler came to power, the Third Reich began constructing big plants for the manufacture of Synthetic Petrol from Coal. In spite of the high cost of making Synthetic Petrol which proved quite uneconomic when compared to that of the imported oil. But Hitler had planned this for war-emergency, and by the time the war started, nearly half of Germany's oil requirements were met by synthetic oil plants. It will be interesting to recollect that German advance and onslaughts during 1940–41 were spaced by a number of pauses in military operations. These were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

only periodic breathing spells on account of oil shortages, and during which petrol supplies were again accumulated. If the War had continued for a few years more, the capacity of synthetic oil plants would have been so large that no such pauses in her advance would have been required.

Germany's efforts regarding her Aluminium industry are also worth mentioning. She has poor deposits of bauxite, the aluminium ore. But before the War she was the biggest producer of this metal. The Germans had developed the Aluminium industry to meet the shortage of copper to some extent. In addition to the imported ore, she acquired bauxite from the neighbouring countries before and during the war, generated cheap electrical power from coal, synthesized cryolite (an essential mineral in alumina reduction) from another mineral fluorite, and produced the cheapest aluminium in the world.

Another effort of Germany to meet the emergency was in the form of discovering new and improved extraction methods of metals from low-grade Manganese, Lead, Zinc etc.

On the other hand, to America, Great Britain and Russia, abundant supply of essential minerals like coal, oil, ferrous and non-ferrous ore minerals were always forthcoming, and it was this sustaining supply of raw materials which enabled them to exhaust the enemy's potential strength and gain ultimate victory.

The Post-war Picture

In the past, coal, petroleum, iron and other allied ferrous and non-ferrous metal ores were the chief mineral resources responsible for the national prosperity as well as for wars. But to-day to this list may be added—and that too at the top—the resources of radioactive or 'atomic' minerals. In addition to their utilization in the manufacture of atom bombs and hydrogen bombs, scientists all over the world are busy harnessing the atomic energy for its utilization for constructive purposes also, viz., as a source of industrial power in place of coal or petroleum. There is almost a mad frenzy amongst nations of the world for discovering deposits of radioactive minerals like Pitchblende (containing Uranium and Radium), Monazite (containing Thorium) and Beryl (containing Beryllium). Countries which are richly endowed with these minerals hold the most important and strategic position in the world politics today.

The best source of atomic energy is Pitchblende and its allied minerals. The chief producers of these Uranium bearing minerals are Belgian Congo, Canada, Czechoslovakia, Portugal and the United States, with sporadic minor productions from Cornwall, Madagascar, Russia, S. Australia and India. Beryl, another atomic mineral, is widely distributed in limited occurrences throughout the world. The third important mineral Monazite containing Thorium, is available in larger quantities. Thorium is not spontaneously radioactive but its atomic disintegration can easily be initiated by laboratory operations. Biggest deposits of Monazite lie within the territories of the Indian Union, as beach sands of the West Coast of Travancore. Other producers of this mineral are Brazil, Malaya and Ceylon.

The distribution of these atomic mineral resources and the greed of various nations to possess and exploit them have given rise to one of the most difficult post-war problems, and it is not improbable that this race for atomic armament may again lead the war-torn world to another more bloody and destructive catastrophe. The piling up of the war machine in the absence of a sane social policy itself makes war inevitable.

India's Mineral Resources

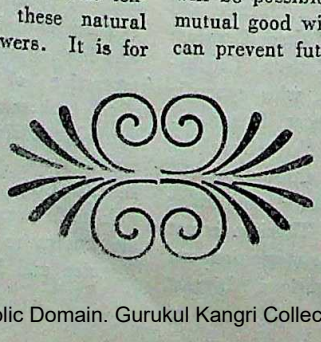
India cannot be considered very rich in respect of all the minerals. But still, it held an important and strategic position during the last two wars on account of some of her minerals. India possesses world's richest Iron ore deposits; her production of Manganese ore is one of the highest in the world; Mica-mines of India are the top suppliers of muscovite to the world. Considerably good deposits of Coal are also available in India. Great Britain holding India in bondage exploited these resources. While the supply of various essential minerals was denied to the opponents, the Allies had the regular flow of such minerals during the last two wars, which brought them to ultimate victory.

But today India is politically free from such exploitation of her natural resources by others. India with her enormous resources of Iron ores, Manganese, Mica, Monazite and a limited supply of Pitchblende and Beryl holds a unique position in the world politics of today. The nightmare of the rising tide of Communism has been haunting the capitalistic countries of the West, and they are afraid of the growing power of Russia and China. India holds a key position in Asia. In the frantic efforts of the two power blocks to bring India to their own side, there may be hidden the motive of exploiting her valuable deposits of Thorium and other minerals. The protestations of helping India in critical moments of scarcity and of assisting her in the technical advancement of India may in fact be motivated by no other desire than the idea of keeping an eye on, and if possible, to exploit her natural resources. India's attitude of neutrality towards the world's power politics of today, and her unique stand for the abiding World Peace are not an agreeable and pleasant affair to the Americans. Prime Minister Nehru has definitely declared that India's help and her natural resources cannot be available to any nation who is on war-path unless the path of war may be for protection of innocent humanity. Taking advantage of the economic distress and scarcity caused by the various natural calamities that have befallen on India during recent years, some countries have tried to bargain for India's Coal, Thorium, Manganese and Mica supplies. Pakistan's pressure tactics to get coal and other supplies are known to all. Behind the so-called sympathy of America and her eagerness to help India, there may be

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

considerations other than humanitarian. There may be the desire to get hold of these strategic mineral resources. The 'wheat deal' has opened the lid. Two years back, when India asked for wheat to ward off her food-scarcity, America demanded in return control over above-mentioned Indian minerals. India could not accept this bargain. Today the food situation is still worse. The country is on the verge of famine and most of the American people thought that India would surrender herself. They proposed the same demand with more severe condition for the food aid. But the country refused to accept this conditional wheat gift from America.



This 'American Food-Aid' affair is nothing but the latest stunt of the 'Power Politics' seeking an easy control over the vital mineral resources of a weaker nation. Not only for India, but for all the weaker nations the conditions are almost similar. Under the garb of chalking out various developement plans and advancing financial aids, the real motive of the few stronger nations is to impose a sort of economic domination upon the under-developed countries, thus reserving for them an absolute control over their mineral wealth. There can be no objection to the exploited nations, if such exploitation of resources aims at the betterment and progress of their own countries, or of mankind in general. But unfortunately it is not so. Their natural resources are being exploited for building up formidable military strength of a few nations only, which are again on the war path. The resentment against such exploitation is daily mounting. The latest example is that of Iran. For several decades her rich oil-fields were a great source of wealth and power to Great Britain. Now Iran wants back the ownership of her own oil, and she wishes to utilise it as a means of bringing prosperity and progress to her people. This is a perfectly justifiable demand. But Britain will not agree to it. She wants the monopoly of this life-liquid of war in order to maintain her high place in world politics, and so Iran, with her rich oil-fields, is becoming a 'sore-spot' in the world to-day.

Korea and Malaya have also somewhat similar stories to tell. Korea possesses rich deposits of Coal, Iron and Tungsten, thus bearing great potentialities for the establishment of a flourishing steel industry. Before and during the last war, Japan was the main exploiter of these Korean resources. But after the War, there was the virtual partition of the State and these mineral deposits went mostly to North Korea. Because of the leftist tendency of the North Korean Government, these natural resources were denied to the Western powers. It is for this reason that the United Nations under the influence of the Western powers did not like to accept the North Korean Government. The aim of the present Korean War for both the belligerents is the unification of the two parts of Korea and the utilization of its entire natural resources, and if the 'United Nations' are successful in their campaign, the 'free and democratic nations' will have an easy access to Korea's Iron, Coal and Tungsten resources for themselves.

The present disturbed conditions in Malaya are proving a constant head-ache to Great Britain. The unrest in Malaya represents the restlessness of the Malayan people to break away from their economic bondage. In addition to her Rubber, Malaya is one of the biggest producers of Tin ore, and has considerably good deposits of Monazite. The repression of the Malayan struggle for freedom has created a very explosive situation in the Far East, and who knows that Britain's desire to perpetually exploit Malayan resources may not lead to some serious international conflict in that area.

It is a great human tragedy that while most of the nations are struggling hard to tide over the misery of hunger, scarcity and poverty, which have followed the last war in its wake, a few so called 'prosperous and peace-loving' nations are again busy in war-mongering. Exploitation of replenishable natural resources like agricultural products to some extent can be tolerated, but that of the mineral resources amounts to almost a crime unless it is for human good. Once lost, they are lost for ever, and the exploited nation ever remains a beggar in the matter of those commodities. And it is such exploitation of the weak by the strong which causes dissatisfaction and resentment, which ultimately culminate in wars. Nature's mineral bounties, which should go to make humanity happy and prosperous, can never be allowed to make its lot miserable But the strong nations in their lust for power forget this maxim, and they always try to exploit the weaker nations in the matter of their natural resources. It would be a grave blunder for mankind to pledge its precious resources for building up a war-machine, because if they do so, the war-machine itself will evoke the nemesis which no one will be able to control.

When the world's natural resources will come to be regarded as property in which all people of the world have a joint interest, regardless of their location, only then it will be possible to effect a mental disarmament based on mutual good will, confidence and tolerance, and this alone can prevent future conflicts and wars.

WELFARE STATE

By K. P. KHUMANI, M.A.

Effective slogans sometimes develop into social objectives. It is said that the modern State is becoming a Welfare State. The Prime Minister of India has given categorical expression that the ultimate social objective of the country must be the realisation of Welfare State. This has been endorsed by the Indian National Congress at its Nasik Session. So it becomes all the more necessary and important to study and analyse the concept of Welfare State and the problems it has to face in its ultimate realisation.

Prof. Pigou of the Cambridge University says that the main motive of economic study is to keep social improvement and hence Economic Science should be realistic rather than pure. Economic welfare may be defined roughly as that part of welfare that can be brought into relationship with the measuring rod of money. Reader observes that welfare increases (decreases) whenever one or more individuals become more (less) satisfied without any other individual becoming (more) satisfied. Despair or measuring utility perhaps drove Robbins to argue that Economics is a positive science and that it is neutral between ends. Henry Pesch would tell that Economics is both a positive and a normative science. The Mercantalists, Physiocrats and Adam Smith placed the welfare of the nation in the centre of their theories; but as regards the means, there is a gulf of difference. Any state professes itself to look after the welfare of its citizens. But the methods to the achievement of this end differ so widely that they deserve careful analysis.

During the laissez-faire days, the State was expected to be only a police man. "Thus far and no farther" was the cry of the time. But with the developments in the factory organisation and in the industrial sphere, the need for the interference of the State was exceedingly felt. The unfairness of putting the low-paid labouring class on a footing of equality with the fortunately well-placed few gained ground. The capitalist system was making its headway and even the actions of the state could not cure the evils of the system. The Marxian onslaught made manifest the social evils that were the results of the capitalist system. Negatively, Marxism served as an eye-opener to the capitalists. The conception of the end of the state similarly changed and the states began to assume powers to regulate the various activities in the interests of the common good. Economics and politics became more inter-dependent than before and poverty was looked upon as a social evil. It was accepted on all hands that all efforts must be directed to eradicate this evil.

The concept of Welfare State has been the subject of discussion in recent years. This word-combination is interpreted differently by different writers. There are divergences in the emphasis in the aspects of Welfare State and consequently there have been grave misrepresentations, which have led to false conclusions. Technically the determining factor of a Welfare State lies in the avowed assumption of certain basic responsibilities by the State in regard to providing education, sanitation, medical relief and means of livelihood to the people and the correlation thereof with the means of production of national wealth. There are some special responsibilities as of unemployment insurance, social insurance, old age pensions and others having a cradle-to-grave sweep which transcend the traditional concept of State functions and focus the special features of Welfare State as such. This signifies the difference between the totalitarian states and other systems. There is no necessary relationship between the Welfare State and the totalitarian state or inherent contradictions between the capitalist system and the Welfare State.

Broadly Welfare States can be classified into three kinds. One proposal is to assure a minimum for all, retaining in principle private property and the price mechanism and allowing the more enterprising to find his fortune and incidentally to benefit the society too. This is the philosophy of free enterprise in which the Americans have placed their belief. Then there is the mild socialistic idea of Welfare State. Sir Stafford Cripps indicates that in the British State "the fundamentals of social justice and economic stability shall be planned" and the rest is to be left to private enterprise to start with. This is best illustrated by the present-day Britain. There is a third kind, which wants the state to absorb all activities. This believes in the nationalisation of all industries and in planning. Russia is the typical example of the third kind.

This naturally takes to the discussion of the need for planning. It is very unfortunate that there is no unanimity even among experts and economists as to the interpretation of the term, "Planning." There can be planning both under capitalist and totalitarian systems. There are ardent advocates of planning like G. D. H. Cole, Wootten and there are also vehement critics like Dr. Hayek and Jewkes. So there is at the first to clarify the meaning of the term. If by planning is meant only central planning, it may not find favour from all quarters. If by planning is meant only thought-out, organised and concerted action, there cannot be any opposition to planning. The two schools which support the extreme views seem to be unscientific and contrary to facts. The planners harp

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

much on the efficiency of state action and they cite the series of Five-year Plans of Russia. It is argued that it eliminates monopoly, shocking inequalities of income and other social evils which are the results of capitalist economy. Further, it is said that free enterprise which has been given such a long lease of life has failed to justify its existence by the recent developments. The standard of life of the people is still at the low level and unless and until State directs the economic activities, no appreciable improvement can be achieved. Planning removes the disharmonies of production, distribution, consumption and exchange. Modern developments in currency, export and imports make planning inevitable.

The other school takes the most gloomy attitude towards planning. Dr. Hayek describes it as "a weapon of totalitarianism used for the oppression of minorities." Belloc says, "The control of the production of wealth is the control of human life itself." Carr disparagingly says that the nationalised thought has passed everywhere with the nationalisation of industry. It is argued by the anti-planners that planning will be too effective or ineffective. The most serious danger lies in the extinction of economic and political liberty. It will end in the regimentation of society. Moreover, national self-sufficiency is destructive of international economic co-operation and incompatible with political co-operation. This point is emphasised by modern economists like Meade and Robbins. Writers like MacGregor suggest solutions to adopt democratic socialism. Robbins is of opinion that in peace time price-mechanism must operate and he would like planning and control to supplement private enterprise and not to supplant it. Individualism corrected and shorn of its crudities and abuses is the best solution.

But modern opinion tends to insist the importance of mixed economy. The State must take up more responsibilities but only in so far as it is conducive to the interests of all citizens. The place of free enterprise must be recognised and appreciated and it must be encouraged so long as it aims and achieves the welfare of the community. As John Jewkes says every sensible economy is a mixed system. So there is no basis to say that Welfare State is possible of achievement only under a particular economic pattern. The end is the same, though the means differ considerably.

Among the notable men that have contributed to the study of the Welfare State, Lord Beveridge stands foremost. His Report has been advanced as a neutral plan with no bias towards either socialism or capitalism. The Beveridge Plan assures at least a minimum welfare of the people. It is a fact that man's dependence on others has very much increased in the present day. He has to be looked after properly in childhood and old age. Apart from these, orphanage, widowhood, sickness, infirmity, accidents, unemployment and other unforeseen contingencies present serious difficulties. The magnitude of these evils has mounted with the growth of industrial civilisation. Social security springs from the universal desire of man to free himself from the fear of want. The State, as an association of individuals to promote their common well-being, has in modern times undertaken upon itself the duty to provide through appropriate organisation the necessary security against these risks.

The term social security generally means income security or security against want. But want is only one of the five giants which are inimical to human well-being. Disease, ignorance, squalor and idleness are equally devastating in their incidence. Society must defend itself against them, as social security in the broader sense would include protection against these evils. The Beveridge Plan chalks out an insurance scheme, which is to be contributed mainly through state funds acquired through special taxation. It provides benefit only in return for contribution. It does not reduce incentive because only a minimum and not a maximum is provided. The Plan also suggests the institution of National Health Service and Beveridge wants the whole system to be co-ordinated under the ministry of Social Security. The Plan has the distinguished features of comprehensiveness, unification of administrative responsibility, classification, adequate benefit, flat rate of contribution and flat rate of benefit.

The scope of social security measures has been "an evolutionary movement directed by experience." There are two main currents, namely, social assistance and social insurance. The social assistance intended to help these unfortunate classes began in England even in the times of Elizabeth when the first Poor Law was passed in 1601. The subsequent Acts also aimed at alleviating the difficulties of the poor. But it must be mentioned that there was some stigma attached to poor relief in those days. But today it is considered as a social evil and a new attitude, characteristic of the democratic age has gained ground. Many countries have introduced legislations to grant old age pensions. It began in Denmark in 1891 and has been adopted by New Zealand, Australia, France and Great Britain. Unemployment schemes have been introduced providing cash allowance or work relief. The United Kingdom follows the cash allowance method and America follows public works policy. The principle followed is "wage-stop" which says that the allowance paid for needs should be less than the amounts which would ordinarily be available if the person were following his normal occupation. This is intended to prevent voluntary idleness and to induce the workers to seek work instead of living on state charity. Family allowances in order to raise the normal income of families to the required minimum are

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

granted. Medical care is specially given to help the poor. The Mothers' Pensions Act in U.S.A., the British Family Allowances Act of 1945 and the Canadian Act of 1944, all these aim to provide social assistance.

The principle of social insurance gained recognition with the National Insurance Act of 1911 passed by Lloyd George, though it was initiated by Bismarck in Germany in the last century. The Health Insurance Scheme of Great Britain may be taken as an illustration of the new technique. The insured person has to pay a contribution during every week he is employed. His employer also has to pay a contribution on his behalf. A fund is thus created to which the State also makes a contribution. Cash benefits comprise sickness and disablement. Maternity benefit is provided. There is also unemployment insurance including industrial and agricultural manual and non-manual labour below £420 a year.

The Labour Government issued a White Paper after coming to power. It recognised the responsibility for maintaining full employment. But the social security insurance plan of the Government need not be exaggerated nor need we break into superlatives in evaluating its utility. It does give the people a security against unemployment and sickness though it does not annihilate them completely.

America, the land of free enterprise, also has undertaken social security measures. The development of these schemes achieved the zenith during the Presidentship of the late lamented Roosevelt, who under the New Deal, introduced new reforms. The New Deal consisted mainly of four types of measures, namely, social security legislation designed to protect the dispossessed from unemployment, illness and old age; measures to strengthen and protect the labour's bargaining powers, measures to aid farm; attack on monopolies and others. Miss Evelyn Hersey, Social Welfare Attache to the American Embassy in India, speaking on "Social Service in U.S.A." in the Social Work Conference, 1941, says that prominent part is played by the privately initiated, sponsored and operated non-governmental agencies. All activities are curative and preventive.

Russia follows the Communist pattern of economy. There, it is said that everyone has the right to work and leisure. Trade cycle is averted and profit and interest are eliminated. Foreign trade is the monopoly of the State. Industries have been divided into three kinds, namely, those of Union significance, State significance and Local significance. But it must be said that the Russian example has got its own peculiarities and special problems.

With the study of the social security schemes in these countries, it would be helpful to see the nature and limitations of social security. The social security that must be provided against all the social evils must differ from country to country. The special problems of the particular country must be taken into account before any comprehensive scheme is envisaged. Apart from this point, the problem of social security itself presents many difficulties which must be tackled carefully.

The term "Welfare," though it is generally accepted, may be misleading. The distinguishing feature of this new kind of State is not that it is more concerned than other States with raising the standard of living of its citizens as a whole. A country's standard of living at any moment is the total of goods and services it provides (less the proportion of these that is used for capital investment and for exports plus the goods that are imported in exchange). The welfare arrangements described above are not designed to increase this production. Their purpose is to ensure that everyone gets a certain minimum share of the production whatever his circumstances. Such arrangements may, of course, have an indirect influence on the volume of production. Mr. T. W. Kent observes that the monetary inducements for the business and middle classes have been much reduced with the growth of the Welfare State. This is not, of course, necessarily to condemn the Welfare State. But it must be borne in mind that the problem is to balance the loss against the benefits. In the initial stages, it may affect production and no security is worth having when the available productive resources services, and commodities are reduced. So there is this necessity to check this difficulty. It is true that the feeling of security created by social services the demonstration of the State's concern for the welfare of its ordinary citizens will tend to improve industrial efficiency, more understanding of their employer's difficulty. In a country with a growing population and a lower standard of living anything that slows down the increase of production is very dangerous.

It is said that a thorough-going Welfare State is one chronically liable to steady inflation. This is found on the experience of industrial economies. This hardship increases all the more in an economy, which is more dependent on agriculture. The fund, which must be created to operate the various social services, must be carefully raised. The benefits of the services should not offset the fresh taxation on the poor. It should not discourage saving and affect the capital formation. A faster improvement in the welfare of the ordinary man can be achieved if welfare measures are introduced at a moderate pace.

Friedaich Baerwald, writing in the Fordham University magazine *Thought*, remarks:

> "It must be clearly understood that no social security system and no welfare policy can function adequately under conditions of chronic unemployment. The key to social security is therefore an employment policy which succeeds in preventing such an unfavourable development of the labour

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

market. If it succeeds even an ambitious social security system is feasible. If it fails social security legislation will not prevent the widespread destitution characteristic of depression."

The implications of full employment are a high degree of continuous employment, which must be congenial. The work must be got with without any delay. Changes of occupation or place must be reduced to the minimum. It must not reduce the standard of living. In the British White Paper, three essential means have been suggested to maintain full employment. There are the maintenance of aggregate expenditure, flexibility of productive resources and the control of wages and prices. The writings of late Lord Keynes, Meade and others really give valuable suggestions with regard to this aspect of the problem.

Then, in the Welfare State, there are other questions like the increase of production and the reduction of the glaring inequalities of income. Apart from the other devices, modern opinion relies on monetary adjustment for these. The progressive taxations like the income tax and the important place given to direct taxes in the present-day public finance aim at achieving these objectives. Bht it must be cautioned that all efforts in this direction should not interfere with savings and investment and capital formation.

After analysing the problems of the Welfare State, it is interesting and appropriate to study the problems that are specially confronted with in India. With the determination to achieve Welfare State, the magnitude of the problem has assumed greater importance than before. It may be said that the concept of the State which now commands the most influential following in the country, if not also the largest following is that of the Welfare State.

The changes that have taken place in India are momentous. The transfer of Government into Indian hands, the partition of the country, which is perhaps the parting gift of British Imperialism, inflation and under-production and lack of capital formation—all these add to the speciality of the Indian problem. Legislations like the Workmen's Compensation Act of 1923, have aimed at improving the lot of the helpless. Mr. B. P. Adarkar submitted his report on Health Insurance for Industrial workers, the essential feature of which has been a compulsory contributory insurance. Though no social insurance scheme has been given by the Government, the need for it has been recognised and all efforts are taken in that direction. The Mines Maternity Benefit Act of 1941 aims at giving maternity benefit to women. The Employers State Insurance Act of 1948 has been indeed a remarkable achievement. It breaks new ground in the field of social insurance inasmuch as it proposes an integrated scheme embodying workmen's compensation and maternity benefit with health insurance. With regard to education and sanitation, steps are taken to provide greater facilities. In a country which has agricultural economy, the difficulties are numerous and with majority of population being illiterate, the most statesmanlike attitude and capacity is called.

In India, during the last fourteen years, the total expenditure of State governments on nation-building activities, as a percentage of total revenue expenditure has gone up from 34.98 per cent to 46.46 per cent. This total expenditure on such activities has increased by 100 per cent between 1946 and 1947. According to the *Statesman's* Washington correspondent, in 1950, U.S.S.R. spent per capita $73 on social and cultural purposes, while the U.S.A. spent 19 per cent more per capita for education, 140 per cent more for social security and social insurance, 370 per cent more for public health and 160 per cent more for scientific research than the U.S.S.R. Though compared to these figures, the Indian example recedes to the background, it is really an advancement if the past economic and political conditions of the country are taken into account.

But a note of warning must be given. If in the high ambition of the realisation of the Welfare State, hasty steps are undertaken, it will result in the frustration of all hopes in the future of India. Several obstinate and cold facts like the under-production and inflation must not be lost sight of. The Indian Rupee has the four-anna value of the Indian Rupee of 1939. The shyness in the capital market and the progressive deterioration in the volume of production must make India feel that any effort must be taken carefully. The Government must follow both "production by inducement and direction." The long-range prosperity of the country must not be sacrificed at the altar of pet principles.

It is feared in some quarters that the Welfare State will inevitably lead to the extinction of the civil and political liberties. The extension of the functions of the State must take place within the desirable social ends, particularly the maintenance of civil and political liberties. Though it is true that Russia has improved the standard of living of the people, it is an unfortunate fact that the personality and the individuality of man is completely ignored. The objective should be to better the position of man, at the same time promoting other social ends too. The *Economist* writes:

> "The sound policy for those who believe in the Welfare State is that the State should maintain for its citizens the highest standard of individual welfare that it can reasonably afford and that does not undermine the economic efficiency or political liberty of its citizens."

Any attempt to achieve too much in too short a time may defeat larger purpose. It is the end that justifies that ultimate jurisdiction of the State. To conclude, "Poverty anywhere constitutes a danger to prosperity everywhere."

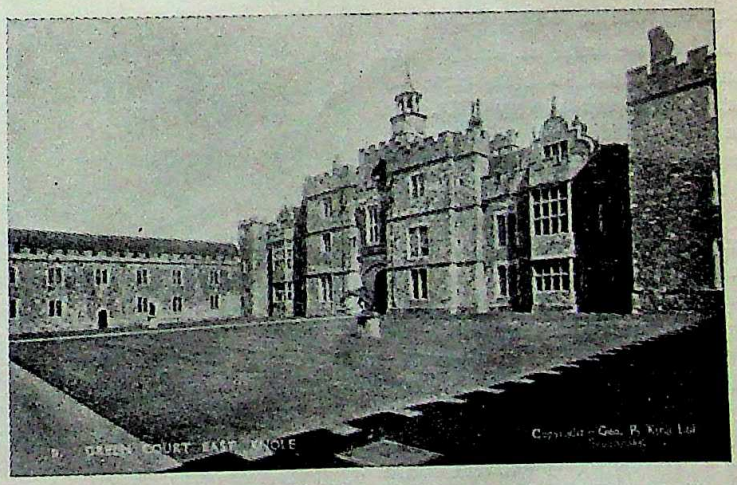
FAMOUS ENGLISH HOUSES

By Major D. GRAHAM POLE

I. Knole

One of the things that has changed in England down the ages is the attitude towards the Spring. In the fourteenth century, the first great age in English history, the poet Chaucer opened his prologue to the Canterbury Tales with a salute to the Spring. In the next great age, the Elizabethan, it is the same; all the sixteenth century poets, from Surrey to Shakespeare, laud and magnify the Spring. I wonder why we have lost that attitude. Why for instance have Maypoles and May Queens quite gone out? Above all, I wonder why we take our holidays in August, that dried-up summer month, when our ancestors chose the sparkling Spring to go on *their* pilgrimages.

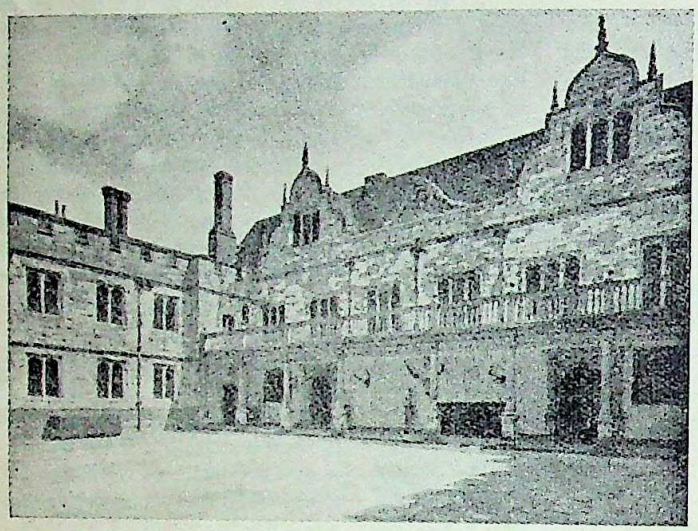


North-West Front from the Park. Knole

Such thoughts came to mind the other day caused by a visit to Knole, largest and loveliest of all our country houses. Knole has a special place in the hearts of English people. For one thing it is completely English, as English as the colleges at Oxford with its courts and quadrangles and mellowing stone. Indeed Knole and Magdalen are practically of the same age. In 1546, Knole was sold to Archbishop Bourchier who built the house as it appears today. And only a year later Bishop Waynflete of Winchester began to build at Magdalen.

To get to Knole the modern pilgrim may set out from London in a democratic char-a-banc, travelling through the most characteristic of all English countrysides. For Knole is situated near Sevenoaks in Kent, a county which has absolutely everything. It has castles, cathedrals and market gardens, oaks and oast-houses and cherry orchards. It has too the rolling north downs and, spreading out below them, the patch-work pattern of the weald. From at least one point on these downs you can see across seven counties.

It is tempting to enlarge on the road to Knole—the quickest way out of London and far and away the most attractive. In a matter of minutes you are at Camberwell Green (Mendelssohn's 'Spring Song' was first entitled 'Camberwell Green'). Thereafter, from Dulwich to Sevenoaks. you are in an unsuspected rural paradise. Dulwich Village, self-contained as a cathedral close, centres round its public school which was founded in the seventeenth century by the actor Edward Alleyn. Never was there gift more allied to the giver! For Alleyn, who must surely have been playing in Faust, dreamt one night that the devil had come for his soul. And he felt so shocked by his dream that he founded the school as a penance. . . .



Green Court East. Knole

On from Dulwich one passes and often through

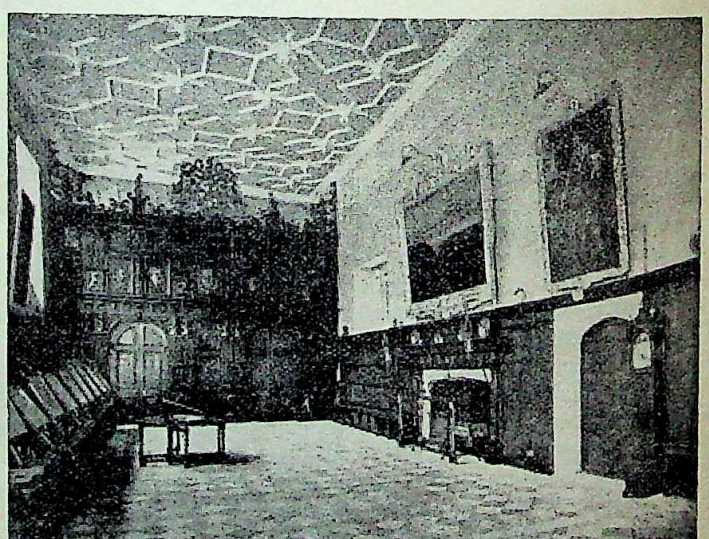
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a green tunnel of over-arching trees. All along the way, past and present blend in comfortable accord. There are old timbered 'pubs' at Beckenham and thatched cottages at Bromley. Outside Sevenoaks the

The Stone Court. Knole

Bat and Ball Inn is a reminder that for more than two hundred years willow for cricket bats has been grown in these parts. (In 1773, John Frederick Sackville of Knole, third Duke of Dorset, presented a cricket-ground to Sevenoaks.)



And so we arrive at the gates of Knole, thankful to have come by car, as the park is very hilly. But the park itself is scarcely noticed because of the engaging tameness of the squirrels who rush down trees to look at the passersby. It is the same with the deer. They stand in groups along the verges of the road, strange little creatures with spotted coats like a Noah's Ark cow, and imported long ago from Japan.

There is nothing ducal or flamboyant about the first view of the house. One enters through a gateway between two towers. On either side of the gateway stretch plain Tudor walls surmounted by later Jacobean gables. Only ornamentation is the Sackville leopard, who sits upright on every gable.

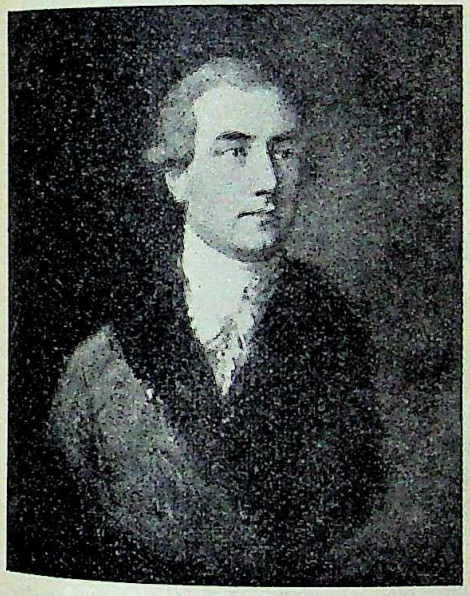
But the gateway leads into the Green Court, the first of seven courts. (Knole has seven courts, fifty-two staircases, and three hundred and sixty-five rooms). Here we are right in the midst of Knole's long history.

In the fifteenth century, as we have seen, Knole was acquired by the Archbishop of Canterbury. It was the first Archbishops who built the East side of this court with its lovely oriel and mullioned windows. Knole would have remained with the Church had not Henry VIII, with his accustomary rapacity, coveted it for himself and compelled Cranmer to hand it over. All the left wing of this court became the King's Stables.

Perhaps I may pause for a moment to comment that under Mary Tudor Knole *did* return to the Church for a little while. In 1556, she granted it for life to Cardinal Pole. But when he died two years later, on the same day as the Queen Knole reverted to the monarchy. Soon it passed to the new Queen's cousin Thomas Sackville, created Lord Buckhurst in 1567 and Earl of Dorset in 1604. He was the first Sackville to live at Knole—which has remained in his family for more than 300 years.

The Great Hall

In the midst of the Green Court are two Italian bronzes. One is of a Gladiator and the other of Venus and they were brought to Knole in the eighteenth century by John Frederick Sackville, third Duke of Dorset. To this Duke Knole owes most of her best paintings. But he must wait till we come to the Reynolds Room.



CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by MoSAIC Foundation, Chennai and eGangotri

Leading out of the Green Court is the Stone Court. It is completely paved and its stones cover a reservoir from which the former inmates used to draw their drinking water. But the general stonyness is redeemed by a most delightful and unexpected feature. Along the length of the eastern side of the court is a wide balcony, supported by a colonnade. It could accommodate musicians or serve for a promenade and it is a Jacobean addition.

The early years of the seventeenth country, the beginning of the Jacobean age, were important ones for Knole. For although Thomas Sackville had been granted the house in 1566 it was not until 1603 that he obtained possession. His was a versatile and late-Renaissance personality. In his youth he had written *Gorboduc*, the first blank-verse tragedy in our language; he entertained musicians and had a private orchestra. He had been Ambassador to France and to the Low Countries and Chancellor of Oxford as well. Only the last five years of his life remained to be spent at Knole but he made the most of them. He is said to have imported three hundred workmen from Italy, including plasterers, upholsterers, masons and glaziers. He it was who launched the house on its long career of being the most beautifully furnished place in England. To this day, people come to Knole solely for the sake of the Jacobean furniture.

Through a doorway under the colonnade is the entrance to the Great Hall. This was built in the time of the Archbishops but heavily overlaid with panels and carvings by this same Thomas Sackville. It is not especially remarkable. The charm lies in the odd brushes with history—from Anne Boleyn to George IV—which the visitor experiences as he wanders round. One of the fire-dogs bears the arms and initials of Henry VIII, the other those of Anne Boleyn. (Poor rejected Queen. There is something so intimate in sharing the fire-dogs . . .). Set out on a table along one of the walls are the Letters Patent conferring on various Sackvilles their titles of Lord Buckhurst, Earl Dorset and Duke of Dorset. Each is headed by a portrait of the Sovereign and my favourite is the one granted by Queen Elizabeth. It is a pleasant surprise, and rather touching, to come on this miniature painting of the redoubtable Eliza. She is depicted, sitting at the top of the parchment, as a dumpy little woman with her knees near her chin . . . I suppose the principal thing in the hall is the portrait of Edward

Third Duke of Dorset
By Gainsborough

Earl of Surrey
By Stretes

Sackville, fourth Earl of Dorset, painted by Van Dyck. But I don't care for it. I prefer Van Dyck in melancholy mood. This Earl seems to swell and swashbuckle.

Coming out of the hall one is met by a lovely sight—a really exquisite carved staircase. It is called the Great Staircase but its name is misleading. Principal staircase it may be but it is not very wide and there is nothing great or heavy about it. It is all lightness and grace and the leopards perched on its pilasters are a sermon in elegant deportment. Sunlight falls across the landings and I do not think that anywhere else in the world can stairs exist which more effectually take away the feeling that any effort or exertion is called for to mount them. The walls are decorated in *grisaille*. This my dictionary describes as

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

'a style of decorative painting in grayish tints in imitation of bas-reliefs.' But time or intention has turned some of these grayish tints to cream or yellow or rose. Or perhaps it was the sunlight.

Apart from the Hall, only the rooms on the first floor are shown to visitors. Here there is a series of galleries with smaller rooms at either end. The one I liked best was the Cartoon Gallery. It bears this name because on its walls are six copies of Raphael's cartoons, which were designs for tapestries for the Vatican. (The original cartoons are now in the Victoria and Albert Museum). The present copies were given by Charles the First to an Earl of Middlesex whose daughter married into the Sackvilles.

Mrs. Sackville
By Lely

This gallery seems to me to sum up in itself much of the history and the beauties of Knole. At the far end, pride of place is given to a painting of Henry Howard, Earl of Surrey, son of the Duke of Norfolk. The first of the Sackvilles was connected with the Duke of Norfolk's family through his mother who was a Boleyn. He was also a poet and he was ten years old when Surrey, a much better poet than himself, was executed by Henry VIII on a charge of treason. He must often have mourned the death of his gifted kinsman. But to return to the painting: it has been the subject of much controversy. No one can fix its precise date and there are four versions of it in existence. They are certainly commemorative portraits. But the most interesting part of the controversy centres round the Latin motto. Painted at the base of a broken column, on which Surrey rests his elbow, are the words 'Sat Super Est.' What is the correct translation, or, rather, what is the meaning which it is trying to convey? The literal translation is 'Enough Survives.' Some think this is a reference to the fact that Surrey had a son to carry on his line. Others see in it a tribute to his verse. He was the poet who wrote about the Spring and I plump for the second explanation. But in any event we can be grateful for the motto. Sat Super Est. Enough Survives! It is a reflection worth adding to one's scanty store of philosophy.

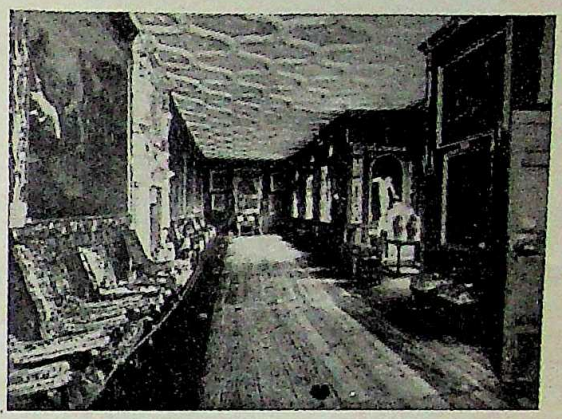
There is a glorious Renaissance fire-place in the Cartoon Gallery. It is in marble and the design rises from floor to ceiling. Such fire-places are a feature of the house and there were others in the ballroom and

Chinese Boy
By Reynolds

the Reynolds room. This one is opposite a window and has a shell-like radiance. Colours altogether glow in this gallery. The walls are covered in rose-red velvet. The windows are painted. And the furniture, of the Restoration period, is in velvets of green and blue and crimson. But the most satisfying thing of all is the *floor*. Every plank looks unusually wide and solid; short for its width and of a different length from the next one. But it all settles into a solid, dark, and gleaming platform. The truth is the floor is not made of planks at all. It is composed of tree-trunks, split in half, with the rounded half downwards.

Huge fire-places and age-old velvets . . . how has Knole escaped the ravages of smoke and moth? (So far as the moths are concerned, does the secret lie in her special blend of pot-pourri, which perfumes all these rooms and has been made since the days of George the First?). In another gallery there are chairs

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar



Digitized by Arya Samaj Foundation Chennai and eGangotri

and stools of the Elizabethan period which are still in their original coverings. The colours are fading into a haze but there seems no reason why these chairs and stools, which have survived so long, should not stay in their places for ever. Knole's most famous furniture is Jacobean and much of it is now in the Leicester Gallery. (Named after Elizabeth's favourite, the Earl of Leicester, who was at Knole for a brief period before the first Sackville). But I do not care much for Jacobean furniture. It has been done to death. I am sick of the typical Hamlet cross-legged chair and the 'Knole sofa' with drop-ends, which is copied by every furniture maker in the Tottenham Court Road. In this gallery one feels more drawn to the portrait of a Countess of Desmond who lived for a hundred and forty years. And what years! She was born in the reign of Edward IV and died when Charles the First was on the throne. (On the way, at the age of ninety, she fell out of a tree in Knole Park and broke a leg). She saw the Wars of the Roses and the rise of Tudor absolutism; saw absolutism crumbling in the uncertain grasp of Charles . . . What would we not give to see in which way our own revolution is developing.

Let those who may, remember Knole for her furniture. Others will recall the Sleeping Beauty atmosphere of her deserted courtyards—and the wonderful collection of portraits in the galleries upstairs.

Every hundred years or so the Sackvilles throw up someone quite outstanding. In Elizabeth's day there was Thomas Sackville. In Restoration times there is the jolly, roistering Sixth Earl of Dorset. He is one of the most brilliant, talented and dissipated figures in a brilliant, talented and dissipated age. It was said of him that his good nature was supreme. Certainly he attracted the most contrasting characters. His affections ranged over Nell Gwynn, William Penn, Pope, Dryden and, the greatest of all fellow-rakes, Lord Rochester. It is reported that Rochester said of him, perhaps with a touch of envy: 'I do not know how it is, my Lord Dorset might do anything, he is never to blame.' To this amiable creature we owe the magnificent sea-shanty 'To all you Ladies now at Land.' (It is in the *Oxford Book of English Verse*). And to him Knole must be indebted for the enchanting series of Lely portraits which hang in the Spangled Dressing Room. Nearly all are of Court ladies. They have the dark good looks of the period and, in their dresses of luminous pinks and greens and yellows, they are very beautiful as they hang in line.

On another hundred years and the Third Duke of Dorset is presiding at Knole. He is devoted to the arts which is a very good thing for posterity because we are now in the age of Reynolds and Gainsborough, the greatest period in English portrait painting. In many ways this Sackville recalls his Elizabethan and Restoration ancestors. He was Ambassador in Paris up to the time of the French Revolution. And instead of a Nell Gwynn there is Giannetta Bacelli, the Italian dancer, to whom he gave his Garter to wear as a hair-ribbon. (She caused great scandal in Paris when she danced at the Opera with *Honi Soit Qui Mal Y Pense* blazing on her forehead!). There is a very beautiful recumbent statue of her at the foot of the Great Staircase.

The Cartoon Gallery. Knole

A portrait of the Duke, by Gainsborough, hangs in the ballroom and it has often been lent to Exhibitions. As a rule Gainsborough is not reckoned a very successful painter of men. To succeed with a portrait an artist must have a firm grasp of character and Gainsborough was not disposed to be analytical. He was for spontaneity and he is better with women and best of all with children. But this painting does succeed. There was a strain of melancholia in both artist and sitter and perhaps that made for understanding. Dorset certainly was very attracted to Gainsborough and commissioned five other paintings. (And paid £105 for the lot!)

But it is Reynolds, the greatest of all English portrait painters, who gets the best showing at Knole. So many of his paintings hang in the Crimson Drawing Room that it has become the Reynolds Room. It was Reynolds, it will be remembered, to whom Boswell dedicated his *Life of Johnson* and who founded the famous Literary Club to which the Johnson circle belonged. Portraits of members of the Club are in this room, including those of Doctor Johnson, Oliver Goldsmith and David Garrick.

Next to a self-portrait by Reynolds, which he is said to have given to Dorset, hangs a painting of extraordinary charm. It is of Hwang-a-Tung, a little Chinese boy who attened on Giannetta Bacelli. Exotic child attendants have been a feature of noble households. (Shakespeare, who was acquainted with the ways of courts, gave to Titania, the Fairy Queen, 'a lovely boy stolen from an Indian king' for her atten-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

dant). It would be interesting to know what happened to this gentle Chinese boy in after-life. All we hear about him is that the Duke sent him to the Grammar School in Sevenoaks.

But Knole alas has lost its most beautiful child painting. This was the portrait of the Duke's three children, painted by Hoppner, which was sold in 1930 in order to clear off death duties. It seems a pity that that picture had to go. For the sensitive little boy, with the soft mass of hair and eyes set so far apart, was the last of the Sackvilles in the direct line. He died in 1815 at the age of twenty-one, after an accident in the hunting-field, and Knole passed eventually to the children of his younger sister Elizabeth. This Elizabeth married George West, Earl de la Warr, and their descendants have adopted the name of Sackville-West. It is the Sackville-Wests who are now at Knole. The title of Lord Sackville was given to them in 1876.

Just after the War the present Lord Sackville presented Knole to the National Trust. It is saddening to feel that these great houses will no longer play a part in the life of the nation. But at least their tapestries and paintings will not be sold abroad to pay for death duties.

And let us salute the Sackvilles—and all others of their kind—who served their country at home and abroad and who in every age were the friends and encouragers of the humanities.

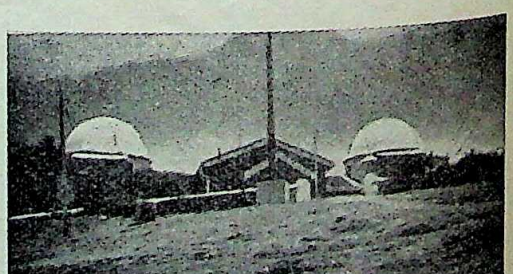
KODAIKANAL

By L. N. GUBIL

On the precipitous southern slope of the Palni Hills overlooking the plains is Kodaikanal, regarded as the most beautiful of the hill stations of Southern India. Situated 7,000 feet above sea-level and easily accessible, it ought to commend itself to all who desire to relax in beautiful surroundings to get rid of the strain of work and the prickly heat of the Indian summer in the plains. In contrast with the "fair glades and neighbouring lawns" of Ootacamund, the alternating hill and dale scenery of Kodaikanal is decidedly more attractive to the visitor from the plains. The salubrity of its climate is comparable more closely to that of the high-lands of Scotland than to the English air characteristic of the Nilgiris.



The Lake

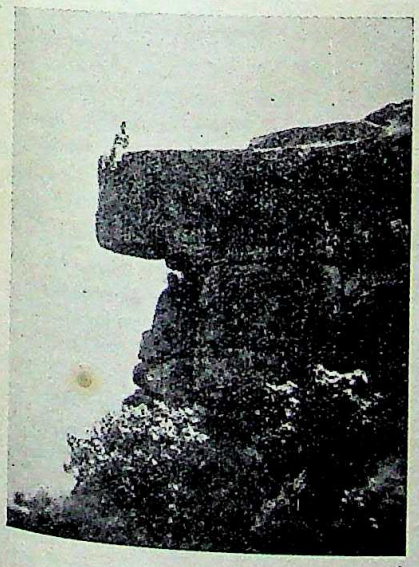
Almost the first thing which strikes the visitor to Kodaikanal is its absolute freedom from convention. In regard to the hour of call the utmost informality prevails, but one may warn visitors against the futility of calling on any one after 4 p.m. as only the invalids keep indoors after that hour at Kodaikanal.

Carlton Hotel opposite to Lake and Boat Club

The Observatory

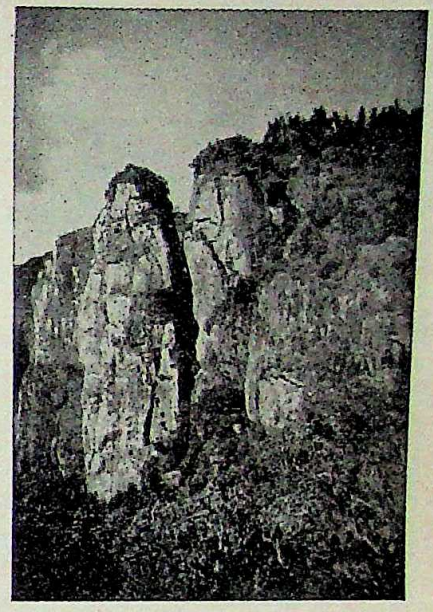
CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri



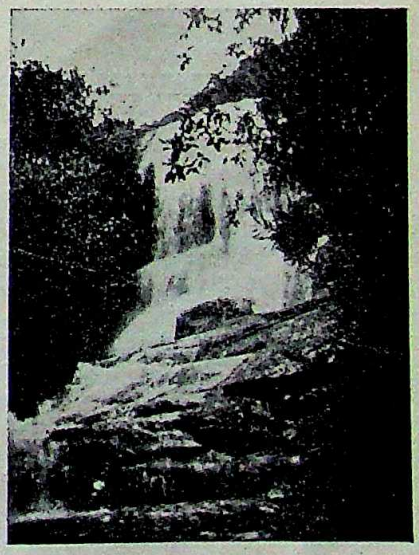
Of all the places of importance to be visited at Kodaikanal, the first is decidedly the lake. On its banks are located the English and Indian Clubs, the Boat Clubs, the Carlton Hotel and some of the offices.

Reservoir



The most popular resort for people of all ages, the lake-side presents a gay appearance with the boats plying across the lake from corner to corner. Many Indian ladies may be seen rowing across the lake and with their gaily coloured sarees add greatly to the colour-effect of the scene.

The Coaker's Walk is yet another popular resort from where one commands an interesting view of the towers of Madura, the adjoining village of Periakulam and the hills and valleys round Kodaikanal.



Dolphin's Nose

The Pillar Rocks are a sight in themselves, standing up to a great height in the shape of pillars among the pine forests adjoining. Nearer home, the Fairy Falls and the Bear Shola Falls are equally attractive. To the more adventurous spirits, the Pambar Valley and Falls and the Dolphin's Nose present attractions of the most exquisite nature. The scenery of the Pambar Valley is Elysian and in the inviolable quietness around, one draws the breath of peace.

Pillar Rocks

The strain of a walk down the whole course of the Pambar Valley may deter all but the most venturesome from making the attempt. The Falls by themselves are a sight not to be missed.

Bear-Shola Falls

The sign-board, Dolphin's Nose 4 furlongs, easily beguiles the unwary into an undertaking, the magni-

tude of which he realizes, when, after walking the distance indicated, he finds himself no nearer to the goal than at the start. But the effort of the walk is amply repaid by the sight of the Nose itself—a huge

Fairy Falls

block of stone jutting right out into the void. It will be a truism to suggest a visit to the Observatory, but a student of science may be informed that it is the one Observatory in India which in addition to being a first class weather Observatory and scismological station, specialises in the study of physics of the Sun and is specially equipped with the most up-to-date

Baronet Levinge Monument

equipment for spectroscopic observations and research on sunlight.

The Jesuit Fathers who have achieved fame through their Colleges in Tiruchirappalli and Madras, have a college for the training of their members in Shembaganur, a place 2,000 feet below Kodaikanal. Any visitor to this hill-station should not fail to see this college and the farm attached to it. A visit to this place is an education by itself.

Thus, a trip to Kodaikanal at any time of the year is sure to produce lasting benefit to body and mind.

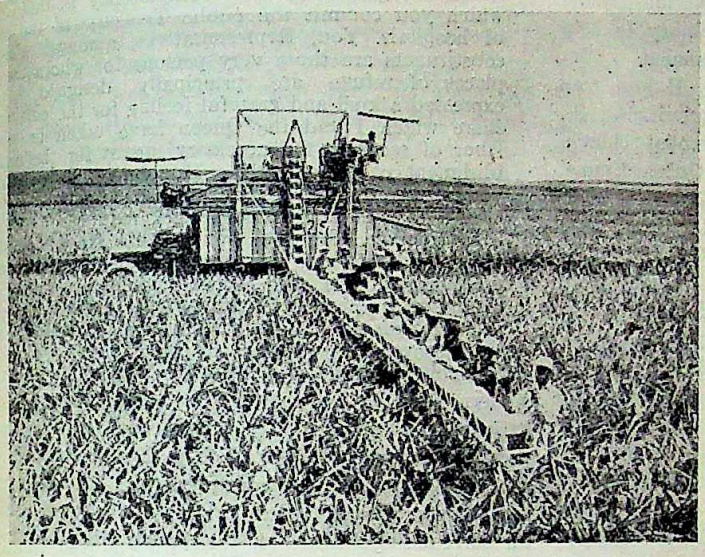
———:O:———

HAWAII : PARADISE OF THE PACIFIC

By MAUDE JONES

Situated in the north-central portion of the Pacific Ocean, the Hawaiian Islands are the focal point of Pacific ocean and air transportation. The first settlers were Polynesians who had journeyed from distant islands to settle there. These migrations extended over some centuries prior to the arrival of the British explorer, Captain James Cook, on January 18, 1778. Then the island group was divided into four separate kingdoms. By 1795, the young chief Kamehameha had won his way to power and conquered all but one of the islands. This island was later ceded to him.

Hawaii had its own culture before the advent of the early European explorers. Without metal of any kind, with only stone implements, the inhabitants perfected the making of canoes, wood and stone utensils, and spears, bark cloth, and mats. Their feather capes were never equalled. Hawaiians were well versed in medicine and anatomy. There was no written language until 1822 but history and genealogies were handed down by word of mouth.



When the first missionaries arrived in 1820 they found a country without a settled religion. Since the old Tabu system had been overthrown after the death of Kemehameha I in 1819, the way was open for the establishment of Christianity.

The evolution of Hawaii's government has been unique. From an absolute monarchy (1795-1840), it became a constitutional monarchy (1840-1893). Then the monarchy was overthrown and a provisional government established. In 1894, this was changed to a republic. On August 12, 1898, the formal act of annexation to the United States took place, and today Hawaii stands on the threshold of American statehood.

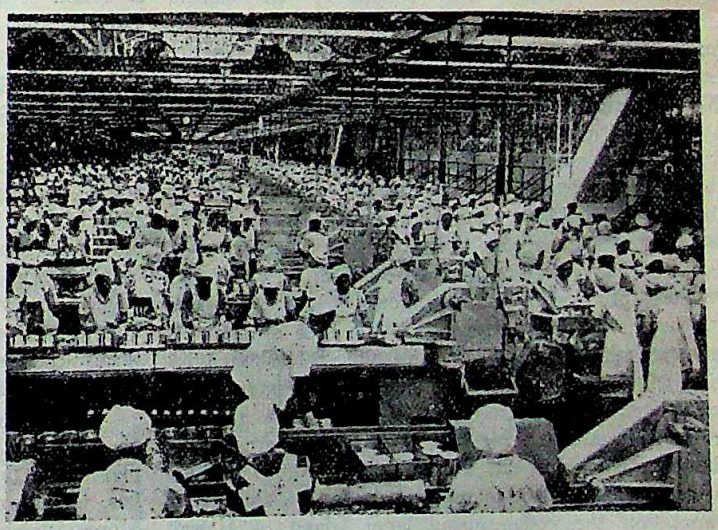
Foreign powers attempted to gain possession of Hawaii from the time Kamehameha I ceded the Island of Hawaii to another British explorer in 1795. In 1816 and 1817 the Russians established themselves in the islands, built a well-equipped fort on Kauai, and had to be driven out by force. In February 1843, an impetuous young English naval officer, Lord George Paulet, seized the islands in the name of Great Britain, but on July 31, 1843, Admiral Thomas, commander of British naval forces in the Pacific, disavowed the act and restored the sovereignty to the islands' ruler. On that day Kamehameha III gave Hawaii its motto: The life of the land is preserved by righteousness. For ten days in 1849 the French occupied the Fort and government buildings at Honolulu.



Using a mechanical harvester, pickers collect the abundant pineapples, one of Hawaii's major crops

The United States had always shown an interest in the island kingdom. The first annexation treaty was drawn up in 1849, and a treaty of reciprocity was negotiated which went into effect in 1876. When the treaty was extended in 1877, Hawaii ceded Pearl Harbor as a coaling and repair station for the use of vessels of the United States. Hawaii was free from foreign invaders until December 7, 1941.

Hawaii's sons have fought side-by-side with American troops in every engagement beginning with the War of 1812. Today they are battling against Communist forces in Korea.

August 30, 1950, was the one-hundreth anniversary of Honolulu's being proclaimed a city and the capital by a resolution in Privy Council. The year also marked the centenary of the city's Board of Health, Fire Department, and Chamber of Commerce, the arrival of the first Mormon missionaries, and of numerous civic organisations.

Territorial executive offices now are housed in Iolani Palace which contains the only throne room in the United States. In this historic room the Hawaiian House of Representatives meets every odd year, while the Senate convenes in what was once the state dining room. Honolulu Hale, the city hall, is an imposing modern structure one block from the Palace. The Islands' archives are kept in a fireproof building in the palace grounds. This was the first building to be erected on United States territory solely for the care and protection of government archives. Other territorial buildings and the federal building are grouped around Palace Square, forming Honolulu's civic center.

Pineapples are sliced and canned under modern conditions in this Honolulu factory

The educational system of Hawaii has advanced steadily since 1820. In January 1949, a total of 86,835 students were enrolled in public schools, 24,760 in

CC-0. Mumukshu Bhawan Varanasi Collection. Gurukul Kangri Collection, Haridwar

private schools, and 4,905 were regsitered at the University of Hawaii. The University's Agricultural Extension Service reaches all parts of the Hawaiian group as well as other parts of the Trust Territory of the Pacific Islands. This Trust was one of those established by the Charter of the United Nations, under which the United States has the responsibility to help the islands in all phases of their development.

Religious freedom is recognised in Hawaii, all denominations enjoying the same privileges. St. Andrews Cathedral, the beautiful Episcopal church, was founded by Kamehameha IV and Queen Emma. The first Catholic priests landed in 1827.

Trade in Hawaii has changed and grown with world development. The fur trade was the first international exchange of goods. Furs were brought from the Pacific Coast of North America and reshipped to China. Next sandalwood was the principal article of trade, but the demand for this was so great that the forests were demolished. The whaling industry followed, but the shifting of the whaling grounds ended this lucrative business, and agriculture came into its own. The first sugar mills were erected in 1838, although sugar was said to have been produced as early as 1802. Coffee, wheat, and other crops are raised in smaller quantities.

With the increase in agricultural development a great demand for labourers arose. The Royal Hawaiian Agricultural Society was organized; government envoys, empowered to negotiate treaties, were sent to foreign countries to procure labourers. Immigrants came from China, Portugal, Japan, Galicia, Russia, Korea, several other Pacific islands, and the Philippines. Small numbers of Scotsmen and Scandinavians arrived. The amazing fact about the introduction of these peoples from so many diverse countries is that they have lived and worked together in complete harmony. All are good citizens. One of Hawaii's assets has been the power to mould people of all races and religions into one harmonious group.

Sugar, the oldest industry, is the base of Hawaii's economy with an annual yield of almost 1,000,000 tons. Pineapples, a comparatively new industry, average an annual pack of nearly 19,000,000 cans. Fish and fish products form a growing industry with a large canning plant at Honolulu and a picturesque fleet of fishing boats. Coffee raising is so important that the public schools on the coffee-raising large Island of Hawaii arrange their vacation schedules so as to allow pupils and teachers to pick the ripe coffee.

Tourists have been considered Hawaii's third industry, but a new development has placed the export of orchids and other cut flowers high on the list of the island's industries.

Hawaii takes pride in her care of the ill and handicapped. Kamehameha IV and his Queen, Emma, founded the Queen's Hospital in 1859. In his speech proroguing the legislature on May 4, 1859, the King said:

> "I confess that the act of your two Houses which I regard with most complacency is that in which you commit the public Treasury to the aid of hospitals. You, Representatives, amongst whose constituents are those very persons for whom these places of refuge are principally designed, have expressed a kind and grateful feeling for the personal share which I and the Queen have taken in the labor of securing the necessary means for the establishment of a hospital in Honolulu. . . . When you return to your several places, let the fact be known that in Honolulu the sick man has a friend in everybody. Nor do I believe that He who made us all, and to whose keeping I commend in now dismissing you, has seen with indifference how the claims of a common humanity have drawn together, in the subscription list, names representative of almost every race under the sun."

Honolulu boasts a 400-bed hospital with all modern facilities including operating rooms, outpatient clinic and a weekly tumor clinic, as well as an excellent school of nurses. Today Hawaii leads in its care of the mentally handicapped with its new treatment center at the Territorial Hospital set in beautiful surroundings. Molokai, the Lonely Isle, has cared for those afflicted with leprosy since the time of Kamehameha V.

The Territory is air-minded. Six airlines connect Honolulu with the mainland of the United States, with Canada, the Antipodes, and the Orient. One airline gives passenger and cargo service to all of the islands and has completed 22 years of operation without a fatality to passenger or crew member. The company schedules more than 50 flights daily.

The big island, Hawaii, is famed for its two active volcanoes, Kilauea and Mauna Loa. In June 1950 Mauna Loa staged one of its most spectacular eruptions. Islanders rush to, instead of away from, an eruption. On this island, the birthplace of Kamehameha I, are the ruins of the ancient City of Refuge. Hilo, its largest city, is situated in the bend of a beautiful crescent-shaped bay with Mauna Loa and Mauna Kea as a background.

Maui, the Valley Isle, has the vast extinct crater of Haleakala where is found the rare silversword plant, and beautiful Iao Valley. Kauai, the Garden Isle, is known far and near for Waimea Canyon and Mount Waialeale where 460 inches of rain fall annually.

The population of Hawaii as of January 1, 1950, was 527,473 (exclusive of the armed forces). The city of Honolulu claimed 263,795 inhabitants.

Hawaii has lived up to her motto, given by Kamehameha III in 1843: *Ua mau ke ea o ka aina i ka pono* (The life of the land is preserved by righteousness).—From *Think*

THE WALL'S BARRIER

By SANTA DEVI

Snatches of diverse conversations are wafted from across the other side of the wall into his ears. Sometimes it is a deep rumbling voice, sometimes the high shrill voice of a child, or at other times, the silvery jingle, the bubbling ripple of a feminine voice. Now all the voices were familiar with him. It was most delightful to listen to the sweet young voice of a girl, chirping every afternoon at four—"How are you, Dada? Now just see, I have brought you oranges, *malpowa* and the finest rice, for you today! Have the sweets at night and tell them to cook this rice for the morning. You do not seem to have any fish-problem in the hospital. If we had four such huge slices of *Rui*-fish at home—it would have been enough for the whole lot of us."

Dada replies, "Exactly! with prices rising to such scandalous heights in Calcutta, very few people can eat their fill with their slender private income."

The girl trips across the floor, lifting cups, moving saucers,—her bangles jingling; he guesses her movements hearing the 'swish, swish' of her dainty *chappals*. Just a yard away and yet unseen.

Suddenly she exclaims, "My! I had very nearly forgotten to deliver the whole lot of letters for you today. Mother repeatedly asked me not to forget about the office-letter and the one from Darjeeling. She will cross-question me when I return home."

Dada says, "Read out the office-letter, will you? I will send the answer by your hand today. There is no hurry about the letter from Darjeeling—I will read it when I get time."

The girl's voice bubbles out in laughter, "There is no hurry, indeed! When you are rid of poor little me, you will gaze leisurely at that *shiuli* tree there and read the letter, heaving deep sighs!"

Dada snaps at her, "You have no sense of propriety or reticence—cracking your crude jokes at any one and every place! Please read me the one from the office. I wonder how many more days the leave will be extended."

The girl starts reading out, in an irritated voice and anglicised tone, a letter written in English. The reading stops with the footsteps of two or three persons. "Hullo Jatin, keeping well? Boy, you did give us a shock? Now you are having quite a secretarial work here, of course!"

A young woman murmurs, "Your ways do irritate us, really! You just couldn't stop scampering about until you were landed with appendicitis—you wouldn't listen to us, so this will teach you a lesson!"

The other new-comer retorts, "You have some hopes! How can your voice reach him, whose trance could be broken only by the penance of that Uma of Darjeeling?"

"I beg your pardon," replies the young woman, "was I trespassing?"

The cabin-servant stamps heavily into the room. He seems to place a tray noisily on the table. The young sister screams, "Such a huge omlette, Dada! The very sight is tempting! But, don't cut it up, please. You will have to fast today if we all start taking shares!"

More and more footsteps. How many more will enter that room? The earlier visitors are making room for the others. That soft-voiced lady remarks, "Jatin Babu *is* popular. I do feel jealous! We wouldn't have so many visitors even in death-bed! And look at the number of books."

Jatin Babu seems to answer, "God bless you, you needn't die. Your list of admirers is growing fast already. The moment I get down from this bed, I too will offer my attendance. And I will bring along as many of the latest books as you want."

Plenty of chattering and gossiping, laughing and teasing, work and play is carried on, throughout the evening. Who will say this was a sick-man's room? When visiting hours end with the six o'clock bell—even newer voices are heard speaking in there!

At long last starts the sprinkling of Lysol solution. Jatin's sister's voice is heard, "We will be going now, Dada. Else they might sweep us out with the holy water."

Another lady pleads, "No, no, please—where is the hurry? These rules aren't as strict as they look. Lots of people sit right up till night."

Gradually the room grows quiet. The servant comes in, then comes the nurse, each does his own alloted duty, chatting a little, while they work. Each pours his tales of misery into the sympathetic ears of Jatin Babu. The servant complains, "If only I could get a better job, Babu? I can cook, I can do some nursing too, what can't I do? But, of course, it is my fate! The kitchen-servants eat as much as they steal, —while we shrivel up like dried fish! I can't even send just ten rupees to my wife and child back home. Why were I born a man then?"

The dark nurse says, "I am a single person, but when I am on duty I must watch over fifty people, with just two hands and a pair of eyes! How can a person endure this? If I had a white skin and wore a skirt—why, I would have had a fatter pay at least,—a good reward for my pains! But, of course, being born dark, I must trudge along as I am."

* * * *

Anadi had sprung from a respectable lineage, and was once quite well-to-do. His widowed mother had sent him to England for higher studies. But his circle of friends there, being very far from thrifty—had

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

reduced him to his present destitute state. Who would have thought, even a month ago, that he, after a street accident, would be lying with a crushed leg in the public hospital? Jatin Babu's cabin was right beside his bed in the general ward. And that was a piece of luck of course. Some times tunes of his familiar world float across from there and make him restless. When that room quietens down his mind can no more forget the visible world. This isn't the world in which he had once roamed and been entangled in ties of love and labour. This is a veritable approach to the jaws of Death. These fifty men breathing the air of the same room and the same world, were strangely different from all normal mortals in their monotonous sameness of lying in bed from dawn to dusk. Queerly identical were their pains, their thoughts and their ravings. In the morning each prostrate man counts the hours for the eagerly-awaited supply of watery milk or some such drink. When the body resists the idea of food, there is no other choice but to think of pain, pain and more pain. At nine, the doctor in his Western outfit, will go through his daily rounds followed by his troupe of assistants. He may give you some relief, assisted by his young students. But nobody has the spare time to listen to the groans of these suffering creatures and soothe away with gentle touch their poor aching bodies. The nurse enters with the thermometer, thursts it once in each mouth, draws the temperature chart, but never speaks a cheery word if she doesn't feel like it. Only her tender hand and kindly smile can rouse a spark of hope in the timid hearts of these travellers to the shores of Death. But there was not a dreg of pity left in the tired body of one who has lived years inside this Vale of Death. Mere pecuniary interests have robbed her tending hands of all natural tenderness. They do feel some warmth in the touch of an inexperienced new-comer. But how short-lived that is! So many of them lie waiting for that single person. She moves from bed to bed like an automaton. What else can she be with her twenty-four hours' schedule of both pleasant and unpleasant duties.

Anadi has nobody of his own to attend to. For most of the others, at least some one comes daily, to carry in a bit of lunch and sit awhile beside the bed. Even in that crowded room they look at each other and smile, as if they were quite alone there. The Hindusthani fellow lying in the next bed has a wife who comes everyday in her dirty sari and silver ornaments just to sit somehow by his pillow and whisper a few intimate words while she wipes his face with an edge of her dirty sari, after feeding him with the bread she brought. She scampers off within a few minutes; but to Anadi it seems that he has given her husband quite a lot within those few minutes.

The Chinese craftsman over there, lying for days in that dazed condition—even he had better luck than Anadi. The Chinaman's wife, in a fit of rage had ripped open her husband's stomach with a pair of scissors! But her smiling face was something to see, now when after a week her husband was somewhat recovering. She came in the evening, donned in her best coat and pyjamas, and entertained her husband with a lot of gossip. Who would say now that once they had quarrelled rather violently? It had been almost a hopeless sight to watch him while he lay senseless for days within that oxygen tent. Today he was a changed man.

But, of course, all did not have the same amount of luck. The ancient sweeper-man, who had come about ten days ago, would lie all day with eyes close-shut, refusing all food, raising himself up only when his wife and daughter arrived every evening. Sitting propped against his pillows, worn and haggard as he was, it was quite evident that he had reached his end. He had no curiosity about the numerous people coming and going and talking around him. What if he was a mere sweeper-man? His face showed as if he was beyond all earthly desires now—and not stopping there—Death the inevitable rears up its head! There began the tussle between life and death—a twenty-four hour ordeal with hot water bags and chafings of hands and feet. Even the impassive doctors and nurses began running to him all day. The wife and daughter came in the evening, together with a lot of women in dirty saris. They sat around the bed, staring at the old man's face. He was propped up against a few pillows, as he could no longer lie flat. Then came the end—before the eyes of a room-full of sick creatures. Some closed their eyes, others turned around on their beds as they lay. It was not long before the empty bed had its sheets changed—and there it stood white and vacant awaiting a new arrival.

That was not the single case—Anadi had seen others such within these few days. His heart trembles and he has a wild desire to jump off his bed and run away. But that of course was impossible. So his heart flies eagerly to Jatin Babu's cabin, catching a glimpse of fresh young life. That room too had a patient in it, but nobody was heard groaning there, the nurses and their helps did not bark out their demands inside it, and even the solemn-looking doctors paused there a few minutes, to chat about local topics. Food from outside the hospital boundaries was carried into the cabin twice daily. A tiffin-carrier every afternoon, and lots of other parcels, brought in the evening, by a variety of visitors. Friends brought fruits or sweets and sometimes stacks of books and bunches of flowers. There were fifty beds in Anadi's room and not a single bed in the whole room could boast of a few flowers by its side. But the other cabin had a regular supply of flowers. Jatin's attending nurse exclaims, "This room simply cannot hold any more flowers; I have filled all my glasses, bowls and mugs with the lot of them."

There were a few more cabins around the general

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ward, and they could boast of visitors too. But a mere glance at a typical set of people always confirmed their being Jatin Babu's visitors. A grimy-trousered Babu, a matron bedecked in her ornaments, or a young fellow wearing a gossamer-thin punjabi and a gold wrist watch—and several others were seen in the evenings. Some were regular visitors, others came occasionally. But they did not seem to be Jatin Babu's visitors, that look of anxious preoccupation mingling with fleeting signs of irritation or fear, showed that they gave greater preference to the ailment than they did to the ailing! Jatin Babu's friends, on the other hand, came with eager smiling faces and eyes shining in curious anticipation. What newer fun would he serve them with today! The girls came, swinging their bags across their shoulders and cradling a few books in their arms. A fleeting glance from under dark eye-lashes would sometimes greet the unfortunates of the general ward. These too were human beings after all! That quick glance seemed to enquire, "What is ailing you? Why are you always alone? Don't you have anybody in this world?" Then of course they walked quickly away taking their smiling glances with them. If they had once stopped to ask about just any man in that room—it might have been a daring thing to do, it might even had annoyed the doctors—but could not anybody imagine how happy the miserable man would have been?

Anadi would surely have known a bit of heaven if that bright young thing had spoken just a few words to him. Today was his twenty-fifth day in this hospital, and he had seen Jatin Babu's friends come in every day—sometimes in the evening, sometimes at noon and sometimes even twice daily. Jatin Babu's sister Apu had never been pointed out to Anadi. He had decided by himself that that tall, slender slip of a girl must be she. After all she was the most frequent visitor. Moreover, that way of hers of twisting her hair up into a tight roll, the way she carried that over-stacked bag of hers with its long leather strap over her shoulder, her way of never wearing the same pair of earrings or shoes for two days at a stretch, that trick of trying to force gravity into that smiling face of hers before she entered the cabin—all added up to suit just that name Apu! Her large sparkling eyes were enough proof that she alone could possess that sweet voice heard from the other side of the wall. And ah, what a tender heart she had! Throughout her visit, she could be heard pleading or commanding, "Please. eat this Dada!" or "Do stop making such a fuss!"

* * * *

Anadi was wondering why Apu had come in the morning that day. She had never done that before. Her sari was coffee-coloured with a wide row of white flowers along its hem—she had put on a beautifully embroidered blouse with it. Anadi had never before seen any Bengali girl embroidery work. But of course, every new fashion looked good on Apu,—and she, therefore, was looking lovely in her embroidered blouse. The imitation pearls she wore on her ears matched the white flowered border of her sari perfectly, and it was not hard to guess that she possessed a keen sense of the artistic.

Today Anadi will be going through a minor operation for his injured leg. A sick headache was teasing him from early morning and the mere thought of his encounter with the operation-table was making his face paler as he sank deeper into his bed. This sudden vision of Apu had cheered him up. He watched her go by his bed and enter Jatin Babu's cabin. Anadi lay back and began thinking about her. Apu came out of the room after some time, and tripping softly across the floor came to a sudden halt before Anadi's bed. "Won't you stand here a minute please?"—The words somhow slipped through Anadi's lips.

"Why, what's the matter?' said Apu. Her eyes were full of tender curiosity. "You don't look like a general-ward patient. Why do you lie here?"

The perfume Apu had used was filling Anadi's nostrils with fragrance. It seemed to carry him away from the hospital's repulsive odour of Lysol, into some strange magic land. He answered her happily, "Don't you know? I thought you knew everything about this place. Didn't anybody tell you my story? I was speeding away on my cycle when the chain snapped off all on a sudden—and even before I could regain my balance a huge Pontiac ran right over these poor legs."

Apu was shocked, and clasping her hands together she exclaimed, "Oh, how terrible! But you could have been killed!"

Anadi replied, "The gentleman was good enough to bring me to the hospital in his car. I would have died then and there otherwise! But now of course, I am very much alive and hope to go back with my legs almost intact."

"Why is it that nobody comes to see you while all the others have visitors coming with sweets and flowers?" Apu asked gently.

Anadi answered, "Who have I, to come and see me—the stray dog that I am?"

Apu cocked her head sideways, like a kitten and exclaimed, "What nonsense! Do stray dogs read *The Discovery of India* while convalescing? I am sure you were running away from home and so your mother doesn't know your present address and predicament."

Anadi replied, "My mother quitted her earthly home years ago,—so I don't think I have a chance of running away from her now. I am quite alone in the world."

Apu whispered, "I am sorry for what I said. From now on I will be visiting you once every day."

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Anadi said, "How is that possible? People will talk!"

Apu answered, "Well, am I not standing here and chatting with you? Nobody is noticing. What is there to talk if one person shows sympathy to another? They are inhuman if they do."

Anadi looked across the room where the young surgeon was consulting with a few nurses. They did once glance this way but it did not seem that they found anything strange. Some of the other patients were either reading newspapers or chewing at oranges, and still some others were busy with their friends and relations. None seemed to notice Anadi or Apu. The ward was unusually quiet today.

Anadi said again, "But, you know there are some things that are better not done. You don't know me. Nobody introduced us to each other. You stopped near the bed of a general ward patient, just because he suddenly asked you to. What will your Dada say to that?"

Apu widened her eyes and replied, "Dada? He will shout the house top down. He will order me out of the hospital."

Anadi said, "And I am sure your mother will be angry too."

Apu laughed, "Mother will beat me with a broom-stick! I don't dare to tell mother. But of course, I shouldn't hide anything from her."

Anadi looked up sadly and said, "I don't think your Dada would have been angry if he knew me well. I am not quite a bad sort. I too have been to England and I do have a foreign degree. Bad luck has brought me down to where I am now. People would have been more than eager to be friendly with me if I could retain my past good luck. Today they turn up their noses and pass me by."

Apu's lowered face was pensive, as she played with the huge, white plastic bag in her hand. A few yards away a nurse stood washing surgical instruments in a bowl of hot water—she glanced gravely at Apu and then went back to work. A very tall doctor in an over-all, went by the bed; he seemed to smile a little. A patient nearby was repeating over and over in a blurred tone, "Mother, oh, mother!" But Anadi's heart and eyes were gazing raptly at Apu's downcast eyes. Suddenly Apu said, "Suppose I bring Dada over here and introduce him to you? He has got a sensitive heart that gives him a lot of trouble when he feels for any one."

Anadi was all smiles, "What can give me greater pleasure?" he answered, "I have been hoping and praying for such a chance for days. I would have gone and got acquainted myself, if I had had the strength to raise myself. Moreover, we wouldn't be allowed to go over there, even if we could use our legs—you see, we do not belong to that aristocracy of private cabins. My mind, of course, is always busy trying to cross the boundaries."

Apu replied, "I had better call Dada—that will surely break the boundaries! He is not tied down to the bed any more. They have let him get up twice daily."

Anadi ventured, "Would you mind very much if I say something? may I ask you to place your hand on my forehead for a few moments, before you call your Dada? It is aching so infernally—it wasn't so bad before."

Apu was not the least surprised. She did not frown or remonstrate. Drawing a stool near the bed she sat at his head.

A heavy perfume floated over as she snapped open her white bag. She brought out a small white phial out of the bag. Then pulling off the stopper, she smoothed the solid white thing over his brow. Ah! so cool and soothing it was.

Apu ran her red-lacquered nails through his hair and gently massaged his head. The throbbing veins seemed to calm down under her tender touch. Anadi's eyes were closing drowsily. But his heart was hammering ecstatically under his chest—and he could not sleep. Was Apu so tender? Her one gentle touch was tying him up for life-long bondage! But will this momentary tenderness suffice? Perhaps he will never again meet Apu after leaving this hospital. Apu will ornament some sumptuous mansion while Anadi will again be carried on his nomadic feet, from road to road. Perhaps he may again fall under the wheels of a car when Apu rides into the Chowringhee market in a Pontiac. May be she will bring him again into this hospital in her own car. But will she visit him everyday? Why should she come when her Dada was no more a patient there? Apu was in no way concerned even if Anadi died here, suddenly, like that old sweeper-man. Her life will lead her to a different route. But why is it that the easiest things are the most unattainable in this earth? Some fateful day Apu will be tied for ever to some one whom she has not met as yet, and who himself has still not seen her—while this luckless fellow always hungered for a glimpse of her sweet smile, or her merry eyes, to whom a single touch of her hand was worth all of heaven—why will he be robbed of his right to meet her once again? Perhaps this was Anadi's fault entirely! If he had been brave enough to express his feelings before her, both their fates might have been wholly changed. Such timidity leads a man to the ultimate loss of his loved one. A man should rightly demand the love of the woman he wants—timidity leads nobody anywhere! Modesty is the befitting grace of a woman and so no man admires feminine boldness.

But why was he worrying at all? What had he to offer her in exchange of his soul's demand? Apu came from a wealthy home, she had never crossed the streets afoot, and had hardly ever got on a tram. She hardly wore [illegible] cloth and according to high

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

society's standard her outfits were correctly matched from top to toe. Apu had also had a fair amount of education. Can such a girl be huddled into a grimy lane in Shyambazar and bound within the four walls of a damp, ground-floor room? Even if her soft heart gives assent to his demands—should he take advantage of it? A flower-like creature as she is Apu will soon shrivel up when struggling with sorrow and drudgery. Anadi felt a bitter pain within his heart. He pushed aside Apu's hand and muttered, "Go back to your Dada. You needn't sit here with me. I will soon be able to cope with this head-ache. There is no need to waste your time and pity on such trifle!"

* * * *

The hand moved away from his brow. Was it Apu who said, "What are you saying? I don't follow you. Are the pains getting worse?"

Anadi said, "Oh, no! I was just telling Apu to go home."

"Who is Apu?" said the girl.

Anadi glanced up surprised, "There she stands, Apu—Jatin Babu's sister! I was talking to her."

Apu flushed scarlet hearing Anadi. "How did Anadi Babu know my name?" she asked.

Anadi stared at her face with the same stunned expression. The room no more seemed quiet and shadowy as before. Even the people around him had lost that unperturbed look. They were all suddenly talking and laughing, frowning and staring. Apu was not all alone with him. She was standing with her Dada, and looking down at him. It was the nurse who was sitting by the bed.

Jatin Babu said. "We heard you had an operation today—so my sister and I came along to see you. I suppose you hear her name often, as you lie very near me! You are quite a learned person I believe, and so my sister wanted to meet you too. She had seen you everyday while going by this way."

Anadi said, "I see. When did you come?"

Jatin Babu replied, "Just about a couple of minutes ago."

Anadi said, "So I have had an operation? When?"

The nurse said, "It was done in the morning. You have been sleeping through the day. I was just sprinkling some eau de cologne on your forehead—you were tossing your head so!"

Anadi said, "Is it morning still? Somehow, I can't guess the time. Have they set my leg, then?"

The nurse seemed to fumble for an answer. Then she replied awkwardly, "Please don't feel too sad about it. Luckily, one was saved—the other will soon be made in wood. There are lots of people who have them."

A few lines of agony flickered over his face. But he was calm when he said, "Well, that settles it. A perfect street-beggar on crutches!"

Apu's eyes filled with tears. Quickly wiping her lashes, she whispered, "Why were you asking me to go away?"

Anadi's eyes were averted. He replied, "You needn't hear what a lunatic says. It does not matter at all."

Apu said, "We had better not discuss it today. I will listen to it some day later on. Do come to our house when you get well! A man should not break down—sorrow is always there, after all. Dada, give your card to Anadi Babu please! Our home address is written over there."

THE STRANGE CASE OF BAUDELAIRE

By Prof. B. N. CHATURVEDI, M.A. PH. D.

"Joy is one of the most vulgar adornments," said Baudelaire, "whereas melancholy is the illustrious companion of beauty . . . . I can scarcely conceive a type of Beauty in which there is no sorrow."

When the writer of *The Flowers of Evil* said this, he was not indulging in any trite paradox—he was hinting at the perverted foundation on which his own life was built up. The masochistic traits which all aspects of his life reveal are conspicuous enough to suggest that he was taking recourse to a psychological mechanism by means of which he could bypass his various complexes and take shelter behind a cult which was at once a denial and an acceptance of life—denial in the sense that he was to build up an esoteric system of his own which could compensate for his lack of healthy reaction to life and acceptance in the sense that he tried to idealise the very ugliness and filth which are anathema to an ordinary sensibility. The process through which he was to effect this reveals the tortuous course of his own life.

The Cult of the Masochist

Masochism in its broader sense implies self-punishment and self-immolation. The masochist is very often prompted by the same motives which impel the criminal neurotic who takes recourse to crime in order to derive a morbid pleasure from the mechanism of self-torture and also from the state of suspense which intervenes between the criminal deed and its subsequent discovery. The confirmed criminal is an artist for whom the crime becomes an end in itself, for it may compensate for his failure in other walks of life. The situation in which Baudelaire was placed and the inhibitions from which he suffered since his childhood made his life analogous to that of the criminal, for the psychological regression under which he took shelter from a frustrated life involved all types of neurotic-cum-criminal

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

symptoms, like cheating, lying and even cleptomania or an uncontrollable inclination to steal.

The Apotheosis of Sin

Much has been written upon the recurrence of the incest theme in Baudelaire's works and the much discussed Oedipus complex from which he is said to have suffered. Here also it was the law of compensation that worked. What he missed in real life he tried to recapture by means of his imagination and by constructing a barrier which would not allow the incest motive to be expressed directly and which would express itself in various circuitous ways by means of substitutes—by his love of sin and evil. "The unique and supreme pleasure of love lies in the certainty of doing evil." Then there is his infatuation for the degraded harlot Jeanne Duval. The paradox of it is that he doted upon her not because he found her sexually attractive but because he found in her a convenient symbol of sin and debauchery.

> "Tombs and houses of ill-fame offer beneath their arbours a bed which remorse has never frequented," he said.

She was not given up in spite of the fact that she had become an obstacle not only to his happiness but to the development of his mind—"a creature who does not admire me and who is not even interested in my work." Baudelaire, physically the least passionate of men, sought the pleasure of horrors and debauchery in his imagination and in his perverted attachment to Jeanne Duval who was loved simply because she provided the safest barrier against the incursion of repressed incest motives. The only explanation that can be found for his glorification of sin and evil is that he derived erotic satisfaction from indulgence in them—this being a psychological substitute for ordinary sensual gratification which was denied to him.

The Double Personality

What was the essence of the conflict within Baudelaire which was responsible for his mal-adjusted personality, try as he did to come to terms with himself by various self-devised mechanisms? The known facts of his life indicate conflict with his step-father General Aupic, disgust at his mother's second marriage and an abnormal attachment to his mother—interpreted by some as bordering on incest. An attraction-repulsion complex in regard to his mother dominated the greater part of his life, for the feeling of guilt that he felt in regard to his mother was repressed and various psychological mechanisms were built up to perpetrate that repression. Love for Jeanne Duval was but one of these mechanisms. But the repression led to a circuitous expression of the banished wish, for Baudelaire's masochism was in one way a punishment inflicted upon himself so that his mother may herself be chastised in him, humiliated dragged into vice and filth. In another way self-punishment was one of the means of going back to an infantile situation and realising in fantasy what could not be attained in real life.

> "It is suffering that becomes the great protectress—the psyche forms a habit of punishing itself with the help of illness, either psychic or organic, or with the help of social failures."

His love for debauchery or evil or sin was an indirect way of achieving what had been inhibited in him for as he said:

> "Modern brutishness and stupidity have their usefulness and often that which has been made for evil turns, by some spiritual mechanism, to the good."

His art provided to him another medium of escape from his inhibitions for it was an effort of his frustrated personality to attain in the realm of the imagination what had been denied to him in real life. The creative force of his imagination would bear forth what would be the equivalent of a child produced by normal sexual relationship. It is these efforts at escape and sublimation that give us an inkling into the meanderings of a tortured personality that tasted the flowers of evil in order to extract good from evil.

Priest of Blackness

It has been said that certain types of neuroses are conducive to the flowering of genius and to that extent humanity is supposed to have benefited from the conflicts and self-tortures of men of genius which have found sublimated expression in their works. The very basis of Baudelaire's art is neurosis. Symbols and images, which have their root in his neurosis, keep recurring in his works and remind us of the black magic of his art. In one of his poems entitled "The Assasin's Wine," he said:

> "To slake the horrible thirst that tears at me, I should need as much wine as her grave could hold . . . I threw her in the bottom of a well and I even pushed in on top of her all the paving-stones that made the margin . . . This debauchee . . . has never known true love either in summer or winter—love with its black enchantments, its retinue of infernal fears, its vials of poison, its tears, its sounds of chains and bones."

One who is not acquainted with the facts of Baudelaire's life may not be able to appreciate the significance of the symbols employed in the poem. The throwing of the woman in the well refers to the repression of the incest motive. Very often in his poetry crime is the symbol of incest and death the equivalent of sexual pleasure and love itself is surrounded with all the paraphernalia of a black incantation. His cynisism, his dandyism, his delusions of persecution regarding his father, his ennui, his dabbling with evil, were all psychological mechanisms meant to arouse antagonism and to give him a feeling of self-satisfaction at being the victim of counter-blows and to obtain delight from a narcicism which held in contempt all that was conventional and commonplace. It is but natural that such a perverted life should have ended in a disease which symbolised self-punishment with a vengeance—cerebral syphilis, being as it were an ironic comment on the identity of 'cruelty and voluptuousness' which he had sought in his life.

GENESIS OF HINDI

By Dr. CHANDRA BHAN GUPTA, M.A., D.Litt.

In another fourteen years Hindi in the Devanagari script will be India's official language. As regards regional languages the Constitution provides that the legislature of a State may by law adopt any one or more of the languages to be used for all or any of the official purposes of that State.

Is Hindi really capable of assuming this high place in India and the world? To understand this problem we have first to make a survey of the division of languages based upon the difference in morphology or word-formation and see if there is any kind of affinity between the regional languages prevalent in north and south India. Secondly, we have to reconsider whether Hindi has been flowing continuously from generation to generation and changing according to dialectical rules and thirdly to analyse whether it has sufficient literature.

There are mainly three divisions of languages based upon difference in morphology. They are agglutinative, isolating and inflectional.

In agglutinative languages the stem and suffix always keep their individuality and are felt as individual parts within the word-form. The Turkish, Hungarian and Finnish languages belong to this group. Take one example of word-formation in Turkish—*el* will mean hand, *el-im* (my hand). *el-im-de* (in my hand), *el-im-de-ki* (being in my hand).

Chinese belongs to the so-called root or isolating languages. Here it is the position of the word in a sentence that determines its character. A word is a verb, noun, or an adjective not because it has the distinguishing characteristics of these, but because it occupies a peculiar position in the sentence. The position and the tone determine the meaning of the word in a sentence which is a string of words. *Mu* is a Chinese word and its meanings are 'eye,' 'thinking,' 'principal' and 'necessary.' In different parts of China it is pronounced as *muka, munga,* and *moka.* If this *mu* or *muka* word is pronounced in a different manner it means 'mother' or 'thumb.'

The Indo-Germanic and Dravidian groups belong to the infectional languages. By inflectional languages were meant those languages whose words are formed by the combination of the stem and suffix and where the combination of these words does not appear clearly. In this type the stem part of the word changes along with the suffix part. Thus in inflectional languages as the stem and suffix change they both come closer to each other and almost become one. Examples from the Dravidian languages and Indo-Germanic languages make this point clear.

	Singular		
	N.	A.	D.
Telugu	*Gurram*	*gurramunu, gurram*	*gurramunuku*
Tamil	*maram*	*maratte*	*marattirku*
Malayalam	*maram*	*marattine, maratta*	*marattinnu*
Kanarese	*maram*	*maranam, maramam*	*marake, marakke*
Sanskrit	*aham*	*mam, ma*	*mahyam, me*
Hindi	*mai*	*mujhe*	*mujhe, mujhako*
Avesta	*azem*	*mam*	*me*

Although a connection between the languages of different groups and languages within one group, like the Indo-Germanic and the Dravidian which also are highly inflectional, cannot as yet be historically proved, yet there is perhaps nothing unnatural if we accept the possibility of such a connection. We can say the languages prevalent in India in the south or north have at least some affinity in the fact that they belong to inflectional languages.

Continuous Flow

Hindi belongs to the Indo-Germanic family of languages and can be traced from the Aryan language of India. To this Aryan language belong the Vedic language and Pali and Prakrit which are called middle Indian dialects and modern vernaculars. We can only understand the relationship between Vedic Sanskrit and Pali and Prakrit in some such manner. They are the direct descendants of a dialect which was spoken in ancient India side by side with the Vedic dialect with which it was very closely related. Words and forms like *prana, sahasra, bohukam, anudivasam, nasti, aha, matari, pitari, samstuta bhutam, avihimsa, anarambhah and bhavati* that occur within some edicts of Girnar show that Sanskrit tradition was current and unbroken then as in later centuries and exercised its influence over the growing languages.

The same is observable in the literary Hindi of today. Here it is to be remarked that a literary language is not an 'artificial' language made by anybody, but one or the other dialect raised to the dignity of a common language of literature.

Under the name Prakrit, grammarians understand various languages. Vararuchi mentions four: Maharastri, Paisachi, Magadhi and Sauraseni. Hemchandra mentions

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

three more: Arsa, which is nothing else than Ardhamagadhi of others, Culikapaisachika and Apabhramsa.

Corresponding to the Prakrits we have the languages spoken in different parts of India today. Thus Marathi is derived from Maharastra Apabhramsa. Gujerati, Rajasthani, a group of several dialects, Punjabi and Western Hindi, also a group of closely allied dialects, are to be traced to Saurasena Apabhramsa; Eastern Hindi, a group of dialects, to the Ardhamagadha Apabhramsa; and Oriya, Bengali, Bihari, a group, and Assamese to the Magadhi Apabhramsa proper. Sindhi from Vracada and Lahnda Kashmiri are probably derived from the Paisacha Apabhramsa. Besides these, there are the Himalayan dialects, Garhwali, Kumaoni and Nepali, called by Grierson the Pahari languages. Dr. Bhandarkar appears to include them among dialects of Hindi.

Thus it is clear Hindi can directly be traced from the Saurasena and Ardhamagadha Apabhramsas, the last stages of Prakrit. At that time as by the word *gatha* Prakrit was implied, so by the word *doha* or *duha* the verse of Apabhramsa or current *Kavyabhasa* was understood. The oldest specimen of the verses of Apabhramsa or Prakritabhasa Hindi are found in the writings of different sects of Tantric and Yogamargi Bauddhas in the first half of the 7th century. In the age of Munja and Bhoja such kind of Apabhramsa or Old Hindi is found in full-fledged form in pure literary or *Kavya* writings.

The Apabhramsa continued mostly up to the beginning of the 15th century. The poet Vidyapati has used two kinds of styles of languages—old Apabhramsa language and spoken *Desibhasa*. He has clearly shown the difference between the two styles.

Desila baana saba jana mittha
Te taisana jampaon avahattha.

i.e., Desibhasa (spoken language) is sweet to everybody so I write the same kind of Apabhramsa (mixed with *Desibhasa*).

Kharīboli, Bangru, Vraj, Rajasthani, Kannoji, Baiswari and *Avadhi* are considered to be different forms of Hindi although there is much difference between their forms and suffixes. Owing to this similarity, the words *ayala—aila, gayala—gaila, hamara—tohara,* spoken in Benaras, Ghazipur, Gorakhpur and Ballia are considered to be Hindi. From this it follows that Hindi has the right to consider *Bisaldeoraso* belonging to the 11th or 12th century as well as the *Padavali* of Vidyapati of the 15th century as its own.

There is a definite phonology in modern vernaculars prevalent in India. They possess all the vowels except *r* and *l*. Some of them have a short *e* and *o* besides the diphthongal *e* and *o*. In Hindi there are 14 vowels. Consonants suffered a change in the Prakrits, being either assimilated or simplified. The modern vernaculars have carried on simplification further. The following examples will show how the changes have occurred from Sanskrit to Prakrit and from Prakrit to Hindi.

Hindi	Prakrit	Sanskrit
sendura	*sindura or senduro*	*sindurah*
kila	*kilao*	*kilakah*
bhaunra	*bhamvara*	*bhramarah*
hatha	*hattha*	*hastah*
kama	*kajja*	*karyah*

One particular change is marked in almost all the modern vernaculars of India. They have passed into the analytic stage. They have lost the Sanskrit and old Prakrit inflections and have adopted postpositions as substitutes for case terminations, *e.g.*

Hindi: *ne, ko, se* (*dwara* or *satha*), *ke liye, se, ka, men* or *para.*
Bengali: *ke, sahita* or *dwara, er janya, haite, era* or *ar, te* or *upare.*
Punjabi: *ne, nun, nala, lai, ton, di, te* or *utte.*
Gujerati: *ne, nen, dwara* or *sathe, mate, thi, no* or *ni, upar* or *ma.*
Marathi: *la, varuna, sathi, pasuna, cha, vara.*

From the above analysis we can assert that Hindi, belonging to Indo-Germanic family, is traced from the Aryan language of India, has a distinct phonology, and has been evolved in its present form according to dialectical rules which affect changes in a particular language.

Hindi Literature

We have to analyse the literature which Hindi contains in a brief form attempting to place the view chronologically as far as possible. As the literature of every country is the true reflection of the feelings of the people of that place, it follows that the change in the nature of literature goes on along with the change in the feelings of the people. Taking into consideration this fact, the history of 950 years of Hindi literature can be divided into four parts:

1. Viragathakala (Age of Heroic Poetry) 1000-1325.
2. Bhaktikala (Age of Devotion) 1325-1650.
3. Ritikala (Age of Style) 1650-1850.
4. Gadyakala (Age of Prose) 1850 onwards.

In the first 150 years, *i.e.,* from 1000 to 1150 no particular current can be ascertained; every kind of religious, moral, erotic and heroic writings are found in *dohas.*

As the attacks from Muslim invaders began a particular form is visible in Hindi literature. As the poets were dependent on kings and *Charanas* used to recite scattered erotic and moral *dohas* in courts so they began to describe the heroic achievements or *gathas* of kings who patronized them. This writing style is termed *raso* and on this account the first division is called **Viragathakala.** These vira-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gathas are available in two forms—in *prabandhakavya* and *viragathas* (ballads). *Prithvirajaraso* is the oldest book in the former style and *Bisaldeoraso* in the latter.

Khusro Mian and Vidyapati of Tirhut towards the end of Viragathakala *i.e.*, about the first quarter of the 14th century give us clear indications of the two different forms of language that were prevalent as the written language and dialect of the country.

Following the establishment of Muslim rule in India the current of thought changed in the country. Poets could no longer sing the merits of heroism of their patron kings and naturally their minds turned towards devotion. At the time came such poets who brought life and vigour in the down-trodden Hindu society and also there was an effort on the part of the poets to bring harmony and unity among Hindus and Muslims.

In Bhaktikala, the popular style of language was being adopted. Kabir wrote in the popular language but that was not up to the mark and it had no definite form. He adopted the *saddhukaribhasa* of Nathapanthis which was made up of Khariboli mixed with Rajasthani and Punjabi. Suradas made use of the popular dialect of Vraj, established it fully in the old *Kavyabhasa* and successfully combined the literary language with the popular style.

Avadhi was also being used. The first writing in Avadhi is *Satyavati Katha* of Ishwar Das. Later the *Premmargi* Muslims also used Avadhi for writing their stories.

Various styles of writing were prevalent, the main five styles being *Chhapayya-paddhati* of Viragathakala, *Gita-paddhati* of Vidyapati and Surdas, *Kavita-Savayya-paddhati* of Ganga and Bhatas, *Doha-paddhati* of Kabir and *Prabandha-paddhati* of Ishwar Das.

The full development of Hindi poetry became visible in this era in the works of Tulsidas. He found two forms of *Kavyabhasa, i.e.*, Vraj and Avadhi and five styles of writing prevalent in the literary field and he employed all the devices in Vraj and Avadhi by his all-powerful intellect and thus secured the first place in the Hindi literary field.

Though in Bhaktikala some books were written on *alamkara* and *rasa* and though Kesavadas wrote *Kavipriya* which did not differentiate between *alamkara* and *rasa*, yet the Ritikala in its proper form began after 50 years, and on a different ideal in which there was difference between *alamkara* and *rasa*.

In Sanskrit literature poets and authors were people of different categories but this difference was not mostly observed in Hindi *Kavya* field of this age. *Antyanuprasa* or *Tuka* is a new feature of Hindi literature which was given due consideration by Kesavadas and which was also not found in Sanskrit literature. In Sanskrit there were many *vadas* in literature, such as *Alamkaravada, Ritivada, Dhvanivada* and *Vakroktivada,* but these *vadas* have got no place in Hindi literature. Hindi poets accepted *rasa* to be the soul of *Kavya*. Although there are some merits of Ritikala, yet the poetry of this age was limited and tied by rigid rules of *alamkara* so that there was no place for experience or individuality.

Though the Gadyakala begins from 1850 yet some books were written in prose in Vrajbhasa previously also. One such Gorakhpanthi book in Vrajbhasa belonging to 1350 A.D. is found. Between 1852-1862 some books on education were written in Hindi.

In the period between 1868-1900 Bharatendu Harishchandra was the most important writer. He wrote his works in clear language and in reality Khariboli got the pure literary form in his writings. The language of Munshi Sadasukha was full of pompousness, of Lalolal full of words of Vrajbhasa and of Sadalmisra words of East. Raja Shiva Prasad had many words of Urdu. The language of Rajalakshman Singh was certainly pure and sweet but there were many words of Agra in it. But as soon as Harishchandra came on the stage, the introductory period ended and the nature of language became definite. After Bharatendu's age began the difference between the different styles and individual specialities of writers. After 1900 up to the present time there is much development of Hindi. Dramas, novels, stories, essays and criticisms of different types have come into existence. Efforts are made to write original books in Hindi on different branches of art and science through such agencies as the Nagri Pracharani Sabha of Banaras.

It is needless to mention the number of words taken from Sanskrit by Hindi, as without taking words from Sanskrit, Hindi cannot be a complete language. We have to translate and write original works on modern sciences. Either we have to adopt foreign words in a large number or we have to find words in Sanskrit or some regional language after analysing the properties of the word.

Dr. Raghuvira after analysing the properties of the words, such as oxygen, phosphorous, sulphur and zinc has given Sanskrit synonyms as *jaraka, bhasvara, sulbari* and *kupyatu*. He has also introduced suffixes like *-atu, -ati, -i* and *-la*. These Sanskrit words may be accepted or not in the learned world but it is definite these words or similar words from Sanskrit have to be adopted for the scientific words as without which the forms such as oxide can not be translated.

We are sure to assimilate words from regional languages. Not to speak of the languages of the north owing to their close alliance with each other, we are

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

taking words from the Dravidian languages of the south. R. Caldwell says the following Sanskrit words which are also used in Hindi have been taken from the Dravidian languages in original form: *akka*—mother, *atvi*—forest, *ali*—female friend (Telugu *alu*—woman), *nira*—water, *pattana*—city, *palli*—a small village, *mina*—fish.

Thus we can emphatically assert that Hindi has sufficient literature flowing continuously through generations and having a distinct phonology and has the capacity for assimilating words from the language, such as Sanskrit and regional languages whether of the north or the south.

Misunderstandings

There is a wrong impression that the present Hindi literature which has been written in Khariboli has been initiated by Muslims alone, that its original form is Urdu and it has been formed by keeping out words of Arabic and Persian.

This impression has arisen because Vrajbhasa was used in earlier literature and Khariboli was used as a dialect only along with other dialects in different provinces. Khariboli was not mostly used in literature or *Kavya*, but it was present in its *desi* form before the time it began to be used for Urdu. In literature also it was sometimes used. The appearance of the old form of Khariboli is also found in the Apabhramsa *Kavyas* in the age beginning from Bhoja and ending in Hamirdeva. As for example,

Bhalla hua ju maria, bahini mahara kantu.

After that in Bhaktikala poet-saints used Khariboli in their *saddhukari* language. Take for example Kabir's words in the following:

Kabira mana nirmala bhaya jaisa ganga-nira.

In the time of Akbar, Gangakavi wrote a prose book on *Chanda-chhanda Baranana ki Mahima* in Khariboli. In 1741, Ramprasad 'Niranjani' wrote a book named *Bhasa Yogavasistha* in clear Khariboli. In 1761, Pandit Daulat Ram translated *Padmapur* in Khariboli written by Harisena in 700 pages. Thus Khariboli was slowly becoming the popular language of the educated people.

Sadhus, Pandits and great personages used this language in their speeches before the advent of the British. The British actually found two languages prevalent among the educated people—the general *desi* form of Khariboli, whiih was called Hindi and the court form of Khariboli given by Muslims, called Urdu. As the Fort William College was started in Calcutta in 1803 in order to get books written in Hindi and Urdu separately, this fact clearly indicated that John Gilchrist who was professor of Hindi and Urdu in the College found the existence of independent Hindi Khariboli as against Urdu.

Under the patronage of the Fort William College, Lallolal Gujerati and Sadalmisra wrote *Premsagara* and *Nasiketopakhyana* respectively. Munshi Sadasukha wrote a book on a subject taken from *Vishnupurana*. He used pure and lively language and included in his writing some prose *tatsam* Sanskrit words also. Persons interested in Urdu only named this kind of Hindi which was mixed with Sanskrit as *Bhakha*. As for example:

Svahhava karke ve daitya kahlaye, bahuta jagha chuka hui, unhin logon se bana aval hai, jo bata satya hoya.

Banaras pandits use for ages *hoyaga, avata hai, isa karke*. All these things indicate towards the spread of Khariboli independent of Urdu.

Suggestions

It is seen Hindi has grown up independently and has been handed down to us from generations as other languages of the world. It has flexibility and can assimilate words from Sanskrit and other regional languages.

Hindi is capable of assuming the place of the official language of the Union as provided in the Constitution. But to bring Hindi to such a high level within ten or twelve years we have to make great effort.

There should be a central board for the advancement of Hindi consisting of learned persons of all the regions of India to be entrusted with the work of translating and writing original books in Hindi on all branches of science. Members of the board should be experts in philology and other branches of science. Experts from foreign countries should also be the members of such a board so that adequate words of foreign languages may also be adopted.

This step may be taken by the Government or learned persons may themselves form such a group. The latter step requires sacrifice on the part of the experts. We won freedom through selfless service and we should make sacrifices for the cause of one language.

It has been seen that associations like the Nagari Pracharani Sabha and some State Governments, such as U.P. and Madhya Pradesh are making vigrous efforts to translate books, Government documents, legislature words and get books written in Hindi but these stray efforts will create confusions as different words will be coined in different places to indicate certain ideas and meanings. Without a central board successful formula for assimilation and elimination of words cannot be complete and if things are left in this topsy-turvy condition there is likelihood of major conflicts even over the language question. It is the Government's duty to strive in this direction in a concerted manner and thus fulfil their mission in bringing Hindi to the real level of the official language of the Union within the stipulated time.

UNESCO AND ITS EDUCATIONAL IDEALS

By NARAYAN C. CHANDA, M.A., B.T.

United Nations Educational, Scientific and Cultural Organisation is an offshoot of the UNO. While the latter is a self-imposed guardian of world peace and has been an arena of bloodless word-fight among astute diplomats, the former holds up the lofty ideal of co-operation and permanent peace in the world society. Both have the same aims but while UNO wants to maintain peace and good relations in the *world of today* by sanction and police force, UNESCO wants to build up a new social order of man *of tomorrow* through proper training and widening of vision. Naturally, UNESCO puts great emphasis upon education and formation of right attitude of the children who will succeed the present generation in the sphere of politics, culture and social and human relations.

Aims of UNESCO

Scientific inventions of Modern Man have annihilated time and space and closed up far-flung continents. No people can now live in complete isolation, immunized from the influence of other nations in any way. Far-sighted men have begun to realise the possibility of a *One World* in which different nationalities living in different regions of the globe will be but component parts of a grand human society throbbing with the noble ideal of international brotherhood, peace and co-operation. Powerful nations have in the past looked upon others as aliens and subjugated and exploited the weaker. This favoured the growth of superiority complex in the victors and a sense of inferiority in the vanquished. But no ethics can justify bondage of man imposed by man. Up till now might has dominated world politics and human relations. There has been a crazy competition for martial strength amongst the big nations of the world; science has been harnessed for destructive purposes so much so that the civilization of man now stands on the brink of total ruin. If the idea of dominating others by sheer brute force still rules supreme, human race is sure to be extinct on the earth by mutual annihilation. When the warring nations rush toward such a lurid future, UNESCO comes forward with vision of a world society composed of human beings bound together by love, co-operation, sympathy and mutual respect for each other's culture.

UNESCO aims at eliminating the cause of wars and ill-feelings among nations at the root. If wars begin in the heart of men, peace also originates there. So its ideals have been to sow the seed of peace and goodwill in the young and soft core of children's hearts. Education is undoubtedly the most potent factor in bringing about a millennium, for by it alone can world peace be broad-based on human sympathies and woven into the very texture of life of the world citizens. UNESCO may thus be termed *Modern Noah's Arc* designed to save human civilization in the cataclystic deluge of Modern Man.

UNESCO's Objectives : How to Attain Them ?

Much of the ills of human relations are the outcome of racial egotism born of ignorance, selfishness, narrowness of vision and callousness about other people's joys and sorrows. Bigoted nationalism and jaundiced racial prejudice rear up children in an atmosphere where proper values are not attached to others' lives and achievements and are primarily responsible for jingoism. UNESCO endeavours to uproot the cause of ills by creating world-mindedness in children through education and proper appreciation of each other's ways of life, achievements, problems and values. In a word, the laudable aim of this organisation is not the impossible task of changing the hearts of hardened politicians overnight but the creation of a new world society through proper training of the children. For :

> "The child represents the possibility of a better humanity, and all men feel more or less consciously that he is their *raison d'etre*, the common end of their complementary efforts."—(*In the Classroom*—UNESCO Pamphlet-V; Page 47).

UNESCO has been trying to rouse the consciousness of "complementary efforts" of teachers and parents in the making of future citizens of the world. Its approach to the problem is characterised by new ideals in the teaching of Geography, History and Foreign Languages for the attainment of the supreme purpose—international brotherhood, world-mindedness, peace and amity.

Teaching of Geography

In most countries the present customary practice is to teach geography in a series of widening circles, beginning with local geography (*i.e.*, the classroom, the school building and its surroundings, the village, the country) and proceeding to a study of the continent. This gives a wrong perspective to the educands by leading them to attach an exaggerated sense of importance to their own country. As a safeguard against this, UNESCO recommends study of universal geography which would depict the world as the common habitat of man and enlarge the child's imagination by interesting him in all that is remote and strange. The pamphlet states :

> "We propose, further, that there ought to be a UNESCO atlas, in the form of a portfolio containing unlettered maps and overlay sheets of transparent papers printed in various languages with the names of mountains, rivers, and towns. The study of their common habitat from the same atlas would constitute an additional bond between all the children of the world."

Teaching of History

Narrow nationalist ideology has a tendency to poison international relations. To avoid this dangerous pitfall, history for children should be a record of man's progress through ages from the primitive to the modern state. "The child must learn that civilization has been, and remains, the work of all peoples." This feeling of a common heritage will prepare the children's minds for international fellowship so far as their future well-being is concerned. To quote again from the UNESCO pamph-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"The child's attention should be drawn to the constructive activities which help to advance civilization, materially and spiritually: the great discoveries; the inventions which make life more secure and happy; the methods for putting the resources of the globe at the disposal of all people. These things make the child feel that he belongs to the whole humanity, and impel him to discharge his debt to the past by working with all his skill for a better life. History must cease to be military history and must become the history of civilization.

"There is need above all for universal history. Just as the child should grow used to considering the earth as his habitat, so he must learn to consider the whole of humanity as the fatherland in whose service the particular fatherlands, his own and others, are enrolled. The teaching of history, therefore, should proceed as should that of geography, not from the particular to the general, but from the general to the particular."

Teaching of Foreign Languages

Mutual understanding and appreciation of each other's culture is one of the happy ties of human brotherhood. And the knowledge of foreign languages serves as a link in this respect. It broadens men's mental and intellectual horizon and promotes intellectual understanding. It is essential for a citizen of the world to know some languages other than his own and appreciate some good literatures and arts of other countries through the original and translations and thereby form a healthy attitude toward foreign civilizations.

* * *

In the bleak world, when the political firmament is overcast with portending explosives, UNESCO envisages a benevolent mental evolution of the young hopefuls to be wrought through educational processes. The pessimist may refer to the past history of man and nod his head in disbelief, the cynic may point to the inherent nature of warring humans and pout his lips in disdain, but the reasoning optimist believes that the idea of international brotherhood and solidarity of friendly relations has already begun to work in the hearts of men and that a brave world, happy and prosperous, worthy of Man—the cream of the creation—will gradually emerge out of the chaos and turmoil of the present age. The awakening of a bigger conception in the minds of right-thinking men heralds a new age for man; it may take time to materialise but it has dawned in human hearts, and that is fraught with immense possibilities for the future.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

Editor, *The Modern Review*

ENGLISH

INDEX OF PAPERS: ALL-INDIA ORIENTAL CONFERENCE (1919—1944): *Compiled by K. Venkateswara Sarma. All-India Oriental Conference, Poona. 1949. Pp. 501. Price Rs. 12.*

The All-India Oriental Conference has deserved well of all students of Indology not only by organising periodical meetings of scholars interested in its various branches, but also by making valuable suggestions to the Government as well as learned societies in this country for the guidance of Indological research in future. It was therefore a happy idea on the part of the author to prepare this work which lists nearly 3,000 papers presented by a large number of scholars at successive sessions of the Conference during the first quarter of a century of its existence. The author has done well in prefixing to the Index a valuable historical sketch of the activities of the Conference from its origin in 1919 down to the completion of its 30th year in 1949, though he has thereby overstepped the chronological limits indicated by him on the title-page. The Index proper, which is very exhaustive and useful, consists of two parts entitled Author Index and Title Index. Useful tables, containing lists of inviting bodies, presidents, secretaries and other office-bearers are added at the end in the form of Appendices. When all this is said in favour of the Conference and its faithful chronicler, one cannot but feel sad at the reflection that some of its most important suggestions (such as those for the creation of a central Indological Research Institute and a Department of MSS. Survey) have so far failed to awaken any response in our national government. Equal disappointment is felt at the fact that some of the schemes sponsored by the Conference and adopted by our learned societies (such as those for the compilation of a Historical Dictionary of Sanskrit and an up-to-date edition of Aufrecht's *Catalogus Catalogorum*) have as yet made no appreciable progress. Finally, it may not be amiss in this connection to express one's deep regret that the Conference has so far neglected to bring home to the Central Government the complete stagnation that has overtaken one of its most important Departments, viz. that of the Department of Archaeology, in recent years.

GANDHISM WILL SURVIVE: *By V. G. Krishnamurti. Published by Pustak Bhandar, Patna. 1949. Pp. v+54+4 plates. Price Rs. 3.*

Mr. Krishnamurti is an enthusiastic Gospeller on behalf of what he calls 'neo-Gandhism.' It is his belief that an attempt should be made to preserve the teachings of Gandhi through a Gandhi Institute; and he presents here the reasons as well as a detailed plan of such an Institute.

HEALTH AND LONG LIFE: *By Swami Sivananda. Ananda Kutir, Rishikesh. 1949. Pp. xiii+380. Price Rs. 5.*

The author is a missionary who believes in nature cure. The book is written for helping laymen in the prevention and cure of diseases through *yogic asanas*, controlled diet, regulated bath, application of the sun's rays, as well as a little of homeopathy and ayurveda. There is much pseudo-science running throughout the book; yet, we believe, there is much of sound, common sense advice also. May those who believe in self-help, profit by a judicious use of the instructions contained in the book.

NIRMAL KUMAR BOSE

COMMENTARY ON THE CONSTITUTION OF INDIA: *By Durga Das Basu, M.A., B.L., Asst. Legal Remembrancer, West Bengal. Second edition. Published by S. C. Sarkar and Sons. Ltd., College Square, Calcutta. Price Rs. 30.*

This is the second edition, the first edition published in November, 1950, having been sold out, of a book which has already made its mark having received praise from the Lord Chancellor of England and from such eminent jurists as P. R. Das. This is perhaps the most exhaustive commentary so far on the Constitution of the country. It has had to concentrate inevitably on comparative materials, which indeed will be useful to jurists and journalists. The author deserves congratulations for this cyclopaedic commentary. It includes the latest amendments; and we hope it should be on the table of every public man and busy journalist for ready reference.

K. N. CHATTERJI

SCIENCE—ITS METHOD AND ITS PHILOSOPHY: *By G. Burniston Brown. Published by George Allen and Unwin Ltd., London, 1950. Price 15s. net.*

The book is an attempt to explain to the educated public the true nature of scientific method and to trace the history of its gradual development. It is a fact that all the implications and assumptions of the method are not known even to many scientists. The author has done well to state clearly in the very first chapter of the book that the foundation stone of the scientific method, namely, the assumption that nature is uniform is after all a *belief* only, though of course a belief that is constantly being justified by experience. The source of that belief may be traced to some property common to all forms of animal life, because the 'learning' of all animals, even of the lowest forms is possible only on the anticipation that the same stimulus will always produce the some effect. When we define science as a method of obtaining true knowledge we mean, according to the author, that it is a method for discovering propositions that can be verified. That was also Aristotle's idea but he overestimated the importance of verbal expression. Bacon corrected Aristotle's error and insisted that science must start with collection of facts. The inductive method is to be applied and suitable hypothesis formed. Crucial experiments would then finally settle the question of the causation of the particular effect. The inductive method is to be applied not only in the physical sciences but also in historical and political studies and in investigations of "memory, composition and division, judgement and the rest." Newton always attempted to follow the geometrical method. Starting with definitions and actions derived from experiments he proceeded by mathematical and experimental proofs to conclusions of greater and greater generality. Whewell in modern times realised that hypotheses were vital to sceince. Milne attempts to arithmetise physics. Eddington emphasises that metrical physics deals only with numbers obtained by reading pointers of some kind. According to Eddington, a metrical physicist "is a man with a scale and a clock and one eye; he needs no other senses" (page 144). Euclidean geometry can be translated into ordinary algebra but geometrized physics needs an algebra which is more complicated. This algebra Eddington designated 'Sedenions.' From this Sedenion algebra he was able to deduce fundamental constants of physics. Physics thus has been reduced to a form of mathematics. Whitehead and Russell showed that all mathematics ultimately rest upon a few definitions and actions of symbolic logic.

The outcome of all this then is this. After a certain stage of development has been reached it is possible to deduce the fundamental constants of physics from a purely mathematical system. This, however, raises other questions. Mathematics depends upon reasoning. Reasoning is very largely done in words and other symbols. Does the necessity of using words impose restrictions on thinking? Here than we come upon a psychological problem, the solution of which is yet to be found.

The author has given a very good and readable account of the development of the scientific method. He has shown that both abstract thinking and concrete experimentation are essential in the scientific method. The biographical sketches of the various scientists have introduced a human touch to what otherwise might have been an exceedingly dry subject. The psychologist may find in these sketches materials for his own study. While the scientific method has been very ably described, the philosophy of it however remains a little obscure. The physicist B. Brown is more in the forefront than the philosopher B. Brown. To present the steps of thinking and the conclusions in the old Dialogue form had been a very happy idea of the author and the illustrations have greatly augmented the charm of the book. While the book can not be a popular one because it needs close and attentive study throughout it is bound to be welcome by all who like to look beyond the limited horizon of their own fields and are interested in questions deeper and more fundemental than what are suggested by the immediate interests of their studies.

S. C. MITRA

LAW, LIBERTY AND LIFE: *By M. C. Chagla, Chief Justice of Bombay. Published by the Asia Publishing Company, Bombay. Pp. 166. Price Rs. 4.*

It was a happy idea on the part of the Asia Publishing House to preserve in a permanent form some of the speeches and broadcasts and articles of Mr. M. C. Chagla, now the Chief Justice of the Bombay High Court. They are 14 in number, and deal with such diverse topics as Law and Liberty, Crime and Punishment, War and Culture, What I Read, International Court of Justice, Uniqueness of Indian Civilisation, etc. The short essays are profound, but not too pro-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

found to be uninteresting to the general reader; neither are they platitudinous to be unattractive and boring to an intelligent reader. The article which has appealed us most is "My Working Faith." We agree with the author when he says, "Every one of us is terribly lonely—infinite spaces separate one soul from another;" and that we "must always pay rent to the ideal." When the author says, "And finally, I believe that in what I have made of my own life I have played a very small and insignificant part; whether you call it the Contingent in life or Kismet or Providence or God there is an outside agency which guides and controls the steps of every one," one is reminded of the following passage in Lord Haldane's *Autobiography* (p. 376): "We are apt greatly to underrate the part which accident and good luck has really played in the shaping of our careers and in giving us such successes as we have had." It is a good little book which every one should read.

J. M. DATTA

VEDIC CULTURE: *By Gangaprasad Upadhyaya, M.A. Published by Sarvadesika Arya Pratinidhi Sabha. Delhi. Pp. 216. Price Rs. 3-8.*

The author of this book is a veteran leader of the Arya Samaj and the distinguished English translator of the *Satyartha Prakash*, Swami Dayananda's masterpiece. He has to his uncommon credit a dozen books in English, more than a dozen books in Hindi and one book in Urdu. In the book under review the author gives brief descriptions of agriculture, cattle, clothing, industry, art and craft, trade, art of building houses, family, caste and the like of the Vedic Society in ancient India.

Sir Gokul Chand Narang, former Minister of Education in the Punjab and an eminent writer on cultural topics, rightly observes in the foreword to this book that the author has clearly pointed out that the Vedas contain positive and ample indications of a greatly advanced civilization and culture as witnessed by copious references to subjects like agriculture, etc., and that the Vedic conception of culture is emphatically theistic and the whole trend of Vedic teaching is spiritual development, not only in one lifetime but in life after life till perfection is attained.

In the very first of sixteen chapters into which the book is divided the learned author, who is a profound Vedic scholar, traces the meaning of culture in the Vedas. According to him, the Vedic synonym for culture is *Krishti* that occurs in the Rig-Veda (1. 4. 6) and means a fully cultured man. The author also points out another Vedic word, *Samskriti*, which conveys the same meaning and appears in the Yajur-Veda (7. 14). But the Vedic culture is certainly not godless, unlike the Western culture. Hence the two cultures of India and the West are diametrically opposite. In the sixth chapter the close relation of God and culture is seriously discussed and the incident of Laplace is pertinently referred to. Laplace is stated to have presented to Napoleon his system of philosophy and when Napoleon asked him why there is no mention of God in it, the scholar politely answered that he did not need God to explain his philosophy. Such is the argument of the materialistic men who hold that God has no place in culture.

The author shows how the Vedic culture is firmly founded on God and supports his statements with original appropriate quotations from the Vedas. A perusal of this book will greatly help us to revise and correct our views about the Vedas, if we have formed our opinions about them othewise. The readability of the book makes it accessible and interesting to the reading public of all sections.

SWAMI JAGADISWARANANDA

THE COMING DEFEAT OF COMMUNISM: *By James Burnham. Foreword by M. R. Masani. Published by the National Information and Publications, Ltd., Bombay. Pp. 215. Price Rs. 3.*

This is one of the latest books of James Burnham, the U. S. A. social thinker who had cut for himself a distinct place among Western thinkers by the publication in about 1947 of *Managerial Revolution*. The author had been a Trotskyite Marxist, differing rather violently from the Lenin and Stalin versions of Communism as applied to practice. We do not know whether or not, he still holds by the same opinions. But from a reading of the present book, no doubt is left in the mind that there is a Western thinker who is sure that so far as a human can prophesy the "defeat" of Communism is "inevitable."

It is an inconclusive book, going round and round the old arguments of *Managerial Revolution*. In that book the author had asked certain questions to which even in the present one he is unable to give satisfactory replies. One of these was—"Why does the moral superiority felt by Democracies result in doubt, scepticism, confusion, unsure about objectives, diffusion of effort, widespread paralysis of the will to act, dread, while the Totalitarianisms assert an immoral superiority which they translate into initiative, decision, unity of purpose, invincible organization, victory in diplomacy espionage, war?"

Prof. Burnham cannot after five years report a better state of things in the Democracies. And though in the first chapter of his book he challenges the theory of "catastrophe" or "crisis," popularized by collectivist writers, there is a contradiction between it and the last chapter. We are afraid that with his earlier aversions to collectivism as enthroned or worked by 'Managers' even under 'New Deal'—the group of administrators, experts, technicians, bureaucrats—who specialized in handing over to Roosevelt "a dramatic new idea," he has been forced to recognize that "modified forms of collectivization" (T.V.A. for example) have come to stay. He is against "a totally centralized economy."

When men like Prof. Burnham has failed to resolve the "confusion" in thought and action, the argument can have no validity except by the adoption of total decentralization which forms a part of the Gandhian experiment. Therefore the Foreword by Shree M. R. Masani of Bombay, the Indian Burnham, leads us nowhere. But the book has value that in attacking Leninism and Stalinism, Prof. Burnham has made quotations from them which should warn the Indian dupes who make a parade of their love for the "Soviet Fatherland."

S. C. DEV

BUDDHIST SHRINES IN INDIA: *Issued by the Publications Divisions, Government of India. Pp. 108. Price Rs. 3.*

This neat and well got-up illustrated guide-book for travellers is a very creditable production. The entire book has been printed on art paper with care. The pictures are clear and alluring to the stay-at-home reader. The relevant historical facts are given in a concise form, and nothing of importance has been left out. We are glad to possess this book and recommend it to all lovers of India.

CURRENT AFFAIRS (India, Pakistan and the world): *Edited by A. R. Mukherji. Published by A. Mukherji and Co., Ltd., Calcutta 12. Price Rs. 4.*

This is a valuable addition to the number of Year-Books already published in Calcutta. The Editor claims that it 'is more than a book of general knowledge and more than a mere record of the daily happenings.' It contains 'an intelligent review of the year, and, necessarily, of the times based on accurate facts and figures.' This book is divided into three parts—World, India and Miscellaneous. To keep one abreast of the times, he must know something about the principal political and social issues which sway the world today.

From a perusal of the chapters of Part I, the reader will get a working knowledge of the events happening in the foreign countries. In Part II, we have as many as ten chapters detailing the various subjects, such as, Education, Press, Science, Art, Politics, Economics, etc., which are hastening the birth of a new India. Part III may be taken as an appendix to the other parts, and deals with matters, such as, Sports, Who's Who, etc. This is the third issue of the *Current Affairs* and covers the whole of 1950 and the first four months of 1951. As an individual enterprise it is a success, no doubt.

But while reviewing a good number of Year-Books in these pages in recent times, one thought has occurred to our mind. Cannot the publishers of these Year-Books, by whatever name we may call them, sit round a table, discuss the matters over and bring out one comprehensive and more authoritative volume, like the *Statesman's Year-Book* or the *Whitaker Almanac*? This will save much trouble, time and money. Our national economy demands it.

JOGESH C. BAGAL

EDUCATION IN INDIA—TODAY AND TOMORROW: *By S. N. Mukerji, Reader in Education and Psychology, Maharaja Sayajirao University of Baroda. Published by Acharya Book Depot, Baroda. First edition, 1950. Pages 248. Price Rs. 5.*

The book under review is a comprehensive account of various aspects of Indian education from the *Background* to the *Education and National Movement*, stuffed with bony facts and statistical charts showing the number of institutions and pupils and the amount expended under different categories in 1946-47. The volume reads more like a report on the progress of education in India than any genuine contribution enlivened by original research or newness of approach in any particular sphere of our educational system. The author, however, deserves thanks for his stupendous labour in sifting facts from numerous sources and offering them in a presentable form. The book is well got-up.

NARAYAN C. CHANDA

SANSKRIT

BHAGAVANNAMASAHASRAM with Dramidopanishad Sara and Tatparyaratnavali of Sri Vedanta Desika: *Edited by Pandit V. Anantacharya and A. Srinivasaraghavan. Published by Sri Krishna Sabha, Bombay 19. Price Re. 1.*

SRI VISHNUCHARITAMRITAM: *By Swami Lakshman Shastri. Published by the Principal, Sanskrit Vidyalaya, Wakhatsagar, Nagaur, Marwar. Price Rs. 2.*

We have here editions of works which will be of special interest to the Vaisnavas. The first volume contains editions of two works—the *Dramidopanishat-Sara*, a small work in 26 stanzas, and the *Dramidopanishat-Tatparyaratnavali* consisting of 130 stanzas. Both the works, attributed to the polymath Vedanta Desika, are based on the Tamil Tiruvaimozhi of Sri Nammaazhwar, the Tamil work being summarised in Sanskrit. One thousand names formed with the words used in the *Tatparyaratnavali* are given at the end of the work. These are considered to be immensely useful to the Vaisnavas in their daily worship.

The second volume is a modern poem in 37 cantos with 856 stanzas dealing with the 24 incarnations of Vishnu. A very curious and interesting feature of the poem is that the fourth syllable of every foot of the stanzas of the poem read consecutively would constitute the stanzas of the Vishnusahasranamastotra of the Mahabharata containing the thousand names. The introduction of this novelty has resulted in making the text occasionally difficult in following and an annotated edition has been promised to help the reader.

CHINTAHARAN CHAKRAVARTI

BENGALI

PANCHKADI BANDYOPADHYAYER RACHANABALI (Vols. I—II): *Edited by Brajendranath Bandopadhyaya and Sajanikanta Das. Bangiya Sahitya Parishad, 243-1 Upper Circular Road, Calcutta 6. Price Rs. 6 each volume.*

We have through the labours of the learned editors of the volumes under review beautiful editions of collected works of Michael Madhusudan, Bankimchandra, Dinabandhu and Dwijendralal. Most of the works of these authors were, however, available in some form or other, though not so handy and attractive. But there are many writers whose writings, not unoften valuable and important, are scattered over inaccessible periodicals and little known even to interested readers owing to the lack of necessary bibliographical aids in our languages. It is a happy sign of the day that stray papers of these writers are receiving some attention and collections have been published of papers on literary criticism and feasts and festivities of Bengal written by different authors at different times and places. In these circumstances, Messrs. Banerji and Das have done a real service and a sacred duty to Bengali literature by rescuing from oblivion and bringing to light the writings of one of these writers, a reputed journalist of his time well-known for his humour and outspoken criticism of men and events. Here we have in two volumes a collection of his papers contributed from time to time to various periodicals—monthlies, weeklies and dailies. But, as the learned editors have pointed out, the two volumes do not exhaust all his papers and a third volume may be published with the remaining ones. Though generally bearing a journalistic tinge there are many papers here which are serious in nature with a scholarly outlook. In fact, his papers on the religion and culture of Bengal deserve to be published separately for the convenience of better utilisation. May it be hoped that the work initiated in the present volumes will be continued in respect of other writers whose memory has been honoured by Mr. Banerji with the help of a few others through illuminating life-sketches in the *Sahityasadhak Charitamala* series?

CHINTAHARAN CHAKRAVARTI

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

ADHUNIK ALOKCHITRAN: *By Parimal Goswami. Published by Photographic Stores and Agency Ltd., 154 Dhurrumtolla Street, Calcutta 13. Pp. 104. Price Rs. 7-8.*

The author has spent thirty years of his life in the pursuit of photographic art, and has produced this eminently practical book on photography in Bengali. The technical side of photography including developing, printing and enlarging has been adequately dealt with. The amateur's principal difficulty, composition, has been described in detail. The commercial side of it including press photography has not been neglected. The book is well illustrated—the number of illustrations and photographs exceed 119; one of them is a colour reproduction of natural colour transparency. The technical execution of the blocks is of high order. A perusal of the book even by a beginner will make him aware of the pitfalls, and tell him what to do and what to avoid in a good photograph. The price considering the excellence of its get-up and the number of blocks is cheap. The author has done a distinct service to Bengali language by publishing it in Bengali and we thank him for it.

J. M. DATTA

HINDI

RASHTRAPITA: *By Jawaharlal Nehru. Pp. 165. Price Rs. 2-8.*

BAPU KE CHARNON MEN: *By Braj Krishna Chandiwala. Pp. 173. Price Rs. 2-8.*

SHRADHA-KAN: *By Viyogi Hari. Pp. 67. Price Re. 1.*

All available from Sasta Sahitya Mandal, Connaught Place, New Delhi.

The stream of reminiscences of Gandhiji, and of tributes to his individuality, ideals and activities, still continues to flow. And rightly, for he was like an ocean from which the thirsty slaked their spiritual thirst according to their own need and capacity. The first of the three books is a symposium of India's Prime Minister's varied intellectual responses to the many-sided and mystic object of his heart's attraction amounting to adoration. The second is a repertoire of reminiscences of the Great-Souled One by one who had the privilege of being very near the former for over twenty-five years and a unique opportunity of observing the composite character, *in action*, of his hero. The third is a series of sixty-seven charming "wordy wood-cuts," illustrating the message of Gandhiji's life and how it moulded the people into a pattern in keeping with the true genius of Indian civilization and culture. Each verbal vignette is a little bead of beauty.

G. M.

GUJARATI

KALABHOJ (A historical novel): *By Ramanlal Vasantlal Desai, M.A. Published by P. R. Seth and Co., Booksellers and Publishers, Keshab Bag, Princess Street, Bombay 2. 1950. Price Rs. 4-8.*

This is a production from the prolific pen of one of Gujarat's front-rank novelists. He takes us to a period of Indian history about a thousand years ago to the banks of the Sabarmati, to a period when the Siva-god was still being worshipped, the Bhils and the Rajputs were scrambling for power, and the followers of Islam from Arabia were on the prowl. It is the intolerance of the Bhils for the Arab foreigners that sets the story going; and the reader meets the boy Bhoj who becomes the hero of the novel in due course.

The novel is divided into three parts, but the breath of history is most to be felt in Part I. The style is easy and fluent, the characters numerous, and the Hindu way of life triumphant. The greatness and the essential human element of the hero touches the reader at times. The love and wooing of Bhoj by Meenakshi is pleasant reading and produces an illusion of history.

P. R. SEN

(1) RASHTRA VALLABH SARDAR VALLABH BHAI: *Cloth-bound. Pp. 164. 1948. Price Rs. 2.*

(2) MAHADEV BHAI HARIBHAI DESAI: *Cloth-bound. Pp. 103. 1948. Price Rs. 2.*

(3) SIR SHAPOORJI B. BILLIMORIA KT.: *Cloth-bound. Pp.264. 1948. Price Rs. 5.*

All three written by Ambalal N. Joshi, B.A., LL.B., Advocate, High Court, Bombay. To be had of Sahakari Prakashan, Ltd., Bombay-1, and published by the Brihad Gujarat Publication House, Bombay-7.

All three biographies are the result of a facile pen, and they are couched in terse language, but not omitting a single important detail in the lives of any one of the three. They read more like a narrative than a list of the incidents in the lives of the distinguished three. Mr. Joshi has about six or seven publications to his credit, mostly on topics relating to the Zoroastrian community. He is contemplating publishing the lives of some Parsi Shethias in English. Sri S. Billimoria is a well-known Parsi philanthropist, though an auditor by profession. All three books are worth reading, so replete with information they are.

INDIAN PERIODICALS

London Voyage to Reality

In his article in *The Aryan Path*, R. M. Fox gives a thoughtful sketch of the British Festival now in progress :

Once it was the fashion for literary critics to dismiss the books they did not like as "mere escapism," an easy but unsatisfactory phrase for it dodged the question of what they were escaping from or to. Few people would really condemn a prisoner for escaping to freedom.

Dreams are the usual form of escape and sometimes these can be powerful urges to action as when Napoleon regarded himself as the Man of Destiny. Even the most matter-of-fact men have their dreams. Their lives would be intolerable without them. To know a man you must first know his dream. A banker, one feels, should have a golden dream; a trader his vision of ships laden with ivory, apes and peacocks; a good craftsman should see his finished work in the lump of metal, stone or wood with which he starts, as I am sure Michael Angelo did in a block of marble. When we know what these men dream about we can understand their activities. Emerson expressed this truth when he said that matter is fluid to thought.

Not only does each man treasure his individual dream as he jostles through the crowded city streets but the nations, too, have collective dreams which most of their citizens share. This dream may have the character of hallucination. So it is well to check accomplishments periodically to see if the reality corresponds with the vision.

The dream to which Britain has surrendered—born out of the uncertainty of the war years—is that of social security and the Welfare State.

From this standpoint I found a recent visit to the Festival of Britain a fascinating experience. Not only does the Festival express current ideas and ideals but its declared purpose is to show the rate and the direction of National progress since the Great Exhibition of 1851. Throughout the whole of the twenty-seven acres of pavilions and grounds, bordering the curve of the Thames, one idea is emphasised. This is that immense progress has been made in production, in transport, in all the manifold Arts of Peace. Industry and knowledge have thrown open this Aladdin's Cave to the millions who, formerly, knew only insecurity and want.

If a proud place is claimed for Britain it is not stated in terms of military conquest. The Crystal Palace in 1851 epitomized the Victorian Era with its Kiplingesque condescension to "lesser breeds" and its conscious "dominion over palm and pine." But the modern aluminium Dome of Discovery presents the story of intrepid explorers who fought their way across frozen wastes to enlarge the boundary of human knowledge. Scientists and inventors find a place here. We can follow their story to the South Kensington Museum where Rutherford, the Curies and Einstein will speak to us from the screen and invite us to share their Atomic dreams.

Turning to the shipping section, I noted that it is not the ships of war which get prominence but the trading vessels and even the smaller ships used in the fishing industry. Utility above all. This Exhibition turns a blind eye upon Nelson and naval glory. A big ship stands ready for the youth of Britain to enter. They can come up to the chart room and the bridge, enter the conning tower and learn how to steer a course while a picture on the screen changes every few seconds to describe the ship's journey from London to Antwerp.

The first object which caught my attention on entering the Festival grounds was a row of flaming torches rising out of the water while the spray from a row of tumbling fountains broke over them.

Fire and water have been pressed into the service of man. This is a fitting memorial to all those Unknown Warriors of Industry on whose work this Festival has been built. It stands like a Pillar of Fire by night and a cluster of weird shapes by day. Charoux's massive piece of sculpture *"The Islanders"* towers above the little people who swarm round it. This represents the Mass Man, all the strength, perseverance and doggedness of the burden bearers of our generation who make roads across deserts, and deserts of cities, who build the mansions and live in "pre-fabs." I missed the gleam of spiritual understanding which might make those burden bearers into the kingly men and women of whom A. E. wrote :

> And deep beneath his rustic garb
> The herdsman finds himself a king.

The time has not yet come for the kingly revelation to burdened humanity. So the sculptor has probably done well to give his group the cruder and rougher touch. Yet when I joined the stream of men, women and children who, in holiday mood, moved through the Pavilion of Construction I noticed the interest they all had in useful work. Here were iron workers blowing sparks from their forge and beating white-hot metal on the anvils till it took strange and intricate shapes. These men stripped to the waist—for it was a hot day—were talking and laughing among themselves, quite unselfconscious and oblivious of the wondering human stream that passed by. Not far away spectacled craftsmen bent over their precision instruments as they tested these for drawing, gauging and measuring. Silversmiths were putting finishing touches to gleaming examples of their art. Here were dishes, salvers, cutlery, spoons, some embossed with leaves or figures, others with the dark, plain surface of deep shining water.

Sheets of pure white paper were falling like gigantic snowflakes on a rising heap.

They were made from shreds of pulped rag by the thousand year old Chinese formula. It seemed as though nothing that could be written on this paper could convey the worth of good workmanship so much as when it was left undefiled.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Skilled work has its dignity which was sensed by the spectators. But not all the work was skilled. In the centre of one pavilion I saw a huge oven fed with pails of floury mixture. Out of this, at the other end, in a constant stream, came sheets of crisp, thin wafer to be cut up, counted and packed in tins by girls who acted and moved like automatons. Proceeding down an incline into a gloomy cavern I saw the dull gleam of coal on every side, held up by pit props. This was an amazingly exact replica of a coal mine and—talking in broad north-country speech—a miner with a pit-lamp on his cap conducted us from one stall to another and explained the development of mining machinery from the humble pick and shovel to the coal-cutter, like a mechanical plough, which tumbles the coal straight on to the conveyor belt. Time was when women and children almost naked, bent double and harnessed with chains, pulled the tubs of coal through narrow passages. Later sturdy little ponies were taken down from the sunlight to the darkness and given the same task. Slowly human savagery is rolled away like a stone from the sepulchre.

This section of the Festival of Britain is part of the miracle of modern industry. But even more miraculous is the fact that tens of thousands drawn from every social strata are going to this exhibition and seeing the actual processes concerned with wealth-making in Britain today. They move on to other pavilions and see what this can mean in terms of schools, of school equipment, of better homes, of travel, thought and cultivated leisure. The material is there and the vision is there too because these things are being shown and demonstrated every day. The doubtful element is the human material. People are still being thwarted and debased. They are not allowed to develop to the point where they could make the best use of all the splendid technical possibilities at their command.

For the Londoner and for the stranger within the city gates this Festival has brought a touch of fairyland to ordinary life. But its chief strength is that it has never abandoned the everyday realities of life and work. Every night thousands gaze from the Embankment or from the bridges with a fascinated awe at this strange splendour. The Skylon is like a huge golden cigar hanging in the sky. They see the Albert Bridge draped in golden beads of light. I heard people asking why must this spectacle come to an end, for no one likes to relinquish a dream.

The Festival is not only an area; it is an impetus and an influence.

Everywhere people who had accepted as a sad truth that the post-war years must be drab and depressing—an aftermath of callousness, cruelty, conscription and cant—have realized that the world is also a place for peaceful industry and care-free laughter. Walking through London I was struck by the difference in the spirit and appearance of the city since I saw it a year ago.

Britain is fumbling with the idea that there is a glamour in the creation of things of beauty and utility, that the present age has its own precious values. It is escaping from the belief that glamour belongs of right only to those who can destroy and smash, though Red Eye the Atavism stills stalks the world with an atom bomb in one hand and a bribe in the other. Up till now all the bugles and the flags have been used to honour the destroyers. It is a strange portent—of largely unintentional significance—that in the heart of London there is a gigantic parade of production in which many skilled workers take a share. People are looking at this and escaping for a moment to reality. Why shouldn't they follow this road ?

Burma in Travail
1942-1951

Prof. S. B. Mookherji writes in *Carriers and Courses* :

Burma, our neighbour across the Bay of Bengal, has been ill, very ill, for the last ten years and more. She was ruled as a Province of Britain's Indian Empire till 1937, when she was separated primarily in the political and economic interest of the ruling race. Within half a decade she passed under Japanese domination.

Under Japanese Domination

Having overrun Thailand, the Japanese army reached the frontiers of Burma in January, 1942. Rangoon fell to the enemy on March 8. With the fall of Lashio, in the far north, the whole of Burma lay prostrate at the feet of Japan. Britain had relied much on the face-value of the whiteman in the East.

The fall of Rangoon opened the flood-gates of lawlessness in Burma. National life was topsy-turvied. Thakin Tun Ok, organised a government known as the *Bama Baho*. The late Aung San assumed the command of the Burma Independence Army. The *Bama Baho*, however, failed to restore peace and order. The treaty between Japan and the *Bama Baho* (March 22, 1942) which had given a number of concessions to Burma, did not work to Japan's satisfaction. The latter was therefore dissolved. A new Government with Dr. Ba Maw as the Premier took its place on August 1, 1942. No sooner had the new Government assumed office, than began an undignified scramble for the loaves and fishes of office, between the Thakin's and Dr. Ba Maw's men in which the victory, more often than not, went to the latter. The organisation of the Thakin party in the thirties, was, by the way, the starting point of Burma's struggle for freedom. The Thakins were "the first to fight for concrete social changes with a revolutionary mass programme" and thus constitute Burma's "first national mass organisation." It might be interesting to recall that Thakin Tun Tun, a school teacher once, and now the leader of Burma's White Flag Communists, was a member, the youngest, by the way, of Dr. Ba Maw's Government.

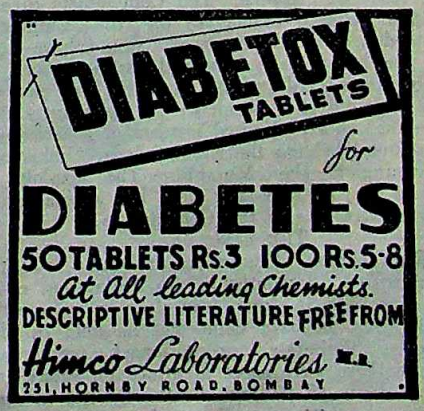
During Occupation

On August 1, 1943, Burma declared her independence, under Japanese tutelage, of course. The first thing done by "independent" Burma was to declare war against the U.K., and the U.S.A. The new constitution of Burma, consisting of 64 clauses in all, named Dr. Ba Maw as the *Adipadi* (Head of the State) and "under cover of a few sentences which expressed the heart-felt longings of the people over many years....set-up in fact a system of one-man rule."—(*Sun Over Burma*, by U. Tun Pe, p. 74).

Dr. Ba Maw's Government had to take orders in all important matters from the Japanese occupation authorities. A complete and reliable history of Burma under Japanese tutelage has yet to be compiled. It is clear, however, that the people were not happy. Money, paper money of course, was abundant; but inflation had reduced its purchasing power to an absurdly low level. Prices sky-rocketed in consequence. Governmental attempts at monetary and economic stabilisation came to nought. Discontent was rife. It was freely whispered that the new dispensation had brought only limited freedom to Burma. The *Kempetai* (Japanese Secret Police) headquarters were the object of universal terror. The people lived in a state of tension. One might be arrested any day on suspicion or the information of enemies and subjected to interrogation and torture by the Japanese police. None felt secure.

Evil Consequence

Burma had hoped that Japan would give her the substance of independence. But, she was soon disillusioned. A huge army of occupation in the country depleted the food stocks. Labourers were forced to work for the occupation authorities. Foreign trade had come to a stand still and many an article of every day use was hard to procure. Kerosene, match-boxes, glass-wares, medicines, textiles, gunny bags, to name a few, practically disappeared from the market. Prices soared higher and higher.



Internal dissensions and bickerings in the meanwhile undermined the foundation of Ba Maw's Government. Thakin Than Tun, the Communist Minister for Agriculture, still co-operated with the Government. But Thakin Soe, a front-rank Communist leader, withdrew his co-operation. The relations between the Thakins and their Japanese allies (?) were strained. Thakin Ba Sein and Thakin Tun Ok tried to organise a constitutional opposition. The Japanese authorities sent them away to Singapore in 1944. The relation between Ba Maw and the Japanese authorities steadily deteriorated. They threatened to drag him down from his exalted position.

The *Adipadi* tried to mend matters by re-shuffling his Cabinet; but the situation had gone beyond control and showed no signs of improvement. Anglo-American victories in the Kohima and Imphal sectors diverted the current of history to new channels. Before the monsoons set in, in 1944, the British 14th Army had advanced to Myiktyina in Upper Burma. A large-scale Allied counter-offensive was in the offing.

Turn of the Tide

World War II and the Japanese occupation of Burama consitute an important land-mark in the freedom battle of that country. The impatient Burmese nationalists had turned to Japan for their country's deliverance. But Japan's policy in Burma only whetted the Burman's urge for freedom. It was this urge which ushered into existence the *Anti-Fascist People's Freedom League* (A.F.P.F.L.) which soon became the common rallying ground of all the leftist elements in the country. The greatest achivements of the League were the awakening of political consciousness among the hitherto apathetic Burmese masses and the creation of a mass political militancy. Anti-Japanese guerillas became active. After the 1944 monsoons they attacked the Japanese army in the rear and wrought havoc. The enemy's means of communication and lines of supply were cut off.

But for the organisation of the Burmese masses into militant units by the A.F.P.F.L., Allied victory in the Far Eastern theatre would have been long delayed.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Before 1943 was out, well-armed guerillas, organised into well-disciplined units, had taken the field against the Japanese invaders. Many more swelled their ranks in the following year.

Dr. Ba Maw and six of his cabinet colleagues withdrew from Rangoon with the retreating Japanese army on April 23, 1945. The metropolis was given to the law of the lawless. U Tun Pe, quoted above, rightly sums up the average Burmese feeling at the time—"There was nothing for us to do but wait and hope for the future." Within a few days the Allies re-occupied Rangoon.

AFTER THE WAR—INDEPENDENCE

An interim national Government on the lines of the interim Government in India was inaugurated in Burma on September 28, 1946, with General Aung San as the Chief Minister. The London Conference (January, 1947) provided for an elected Constituent Assembly which was to decide Burma's political future. The election of the Assembly boycotted by an important section of Burmese public opinion, represented by U. Saw and Thakin Ba Sein, ended in a complete victory for the A.F.P.F.L., led by General Aung San. He and five of his Cabinet colleagues were, however, assassinated in the Rangoon Secretariat on July 19, 1947. The General's mantle fell upon Thakin Nu, Vice-President of the A.F.P.F.L. and President of the Constituent Assembly. The Assembly voted Burma out of the British Commonwealth of Nations.

Burma declared herself a Sovereign Socialist Republic on January 4, 1948, and almost immediately afterwards found herself in the throes of internecine internal conflicts. The integrity of Burma and the very existence of the infant Republic hanged in the balance in the winter and spring of 1948-49. Disruptionist forces in the Burmese body politic reared their heads. The consequent insurrections, in the words of Thakin Nu, "are the direct result of decayed conditions when the British handed over the administration." More than half a dozen of insurgent groups—the White Flag Communists under Thakin Than Tun, the Red Flag Communists under Thakin Soe, the Karens under Saw Ba U Gvi (since killed in action), the White Band P.V.O., the Mons, the Mujahids, led by a former Pakistani army officer and the army-deserters—took the field against the Nu Government. They have not yet laid down arms. In the summer of 1949, Thakin Nu's Government had lost control over more than 90 per cent of Burma. Rangoon itself was threatened. Mandalay, Burma's second largest city, passed into the hands of the insurgents. There were troubles here, there and everywhere. Communications were dislocated.

The Karens want a separate sovereign Karen State. The 'Mujahids' are fighting for a Muslim State, comprising a part of Arakan. The Communists dream of setting up a People's Democracy on the Chinese and Russian model. The Karen revolt would have petered out long ago but for the help and encouragement from the British groups, civil and military, with long experience of Burma acquired from residence in the country during British regime. A very limited number of Americans also have been found helping the Karen rebels. Pakistan has been encouraging the Mujahids. The exploits and achievements of Mao Tse-tung and his comrades have been a great incentive to the Communists.

THE ELECTIONS

The first election of independent Burma, which was to be held within 18 months of the declaration of independence, was held in June, last after several postponements. Elections, however could hot be held in all the constituencies. Elaborate, precautionary measures notwithstanding, there were cases of attack on voters and of the burning down of polling booths by the insurgents. All these are a pointer that Burma is not yet out of the woods. Thakin Nu himself observed in a recent speech, "I have freely to admit that conditions in Burma to-day are very little different from those that were a year ago." Comment is superfluous.

A very tough job awaits the A.F.P.F.L., which have won the last month's parliamentary elections. Burma has been rightly compared by Thakin Nu to "a house decayed and eaten by white ants." If she is to be saved for democracy no time should be lost in launching a campaign to re-build her. An all-out effort must be made to make life worth living for the *lude* (masses).

Will the A.F.P.F.L. do it? Let us wait and watch.

Jain Antiquities of Rajgir

Adrisa Banerji writes in *The Hindustan Review*:

One of the gravest error, that has been made, in our assessments of any Indian holy place, is the exaggerated importance that has been granted to Buddhism. Thanks to Asoka and indefatiguable Chinese travellers and their records, the claims of other faiths have been lost sight of. To some extent the accounts of early Jaina writers which were not verifiable by scientific researches were responsible for this unfortunate position. Nevertheless, the existence of a Jaina *stupa* at Mathura, the find of large amount of inscribed Jaina images dating from a century before the birth of Christ, have proved beyond doubt the historicity of their claims. The caves Khandagiri and Udayagiri, prove the existence of Jainism in ancient Odra desa—modern Orissa.

Jainism, is earlier than Buddhism. If, Gautama was a historical personage then we have to admit that his contemporaries were also historical, and in this category

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

comes Mahavira. But Mahavira according to tradition was the last of the *tirthankaras;* what about his other immediate predecessors, even if we do not insist on the whole list as accurate ? There are archæological as well as literary, evidences to believe that Jainism had great following in Bengal, Bihar and Orissa. Next in the teachings of Buddha even in sentences ascribed to the 'Master,' we find no half-hearted mention of *Nigranthas.*

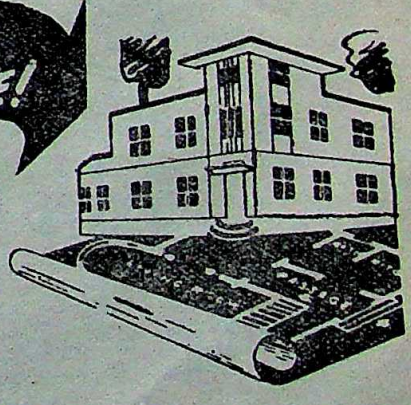
There is an instance in *Majjhima Nikaya,* which establishes the knowledge of Buddha about the Nigranthas or Jains. While relating the Sri Gupta incident, in the last Buddha's life the Avadana-kalpalata definitely tells us, that his preceptor was a Jain. The late Dr. A. B. Keith tells us : "In one point all these sages agreed; there were Sramanas, ascetics in some degree, and they shared this peculiarity with the Jinas whose leader Nigantha of the Nata clan, was evidently regarded with hostile eyes by the Buddha." This can only be explained by the extreme influence that Jainsim exercised over the mass mind by Jainism.

It is undeniable, that Rajagriha, the ancient capital of eastern India, must have been a stronghold of Jainism, as the doctrine arose in Magadha.

How is it then with the exception of few modern temples, no actual remains of the Jaina faith have been traced at or near desolate Girivraja, the city girt by mountains, while the followers of its rival faith proudly flaunt before the admiring gaze of the world the questionable *sattapanni,* the terraced rocky remains, the alleged Ajatasatrus' stupa, the majestic Gridhakuta. The answer is to be found in the lack of retentive power of the brain in the Indian masses. The exaggerated claims of the devout Chinese pilgrims based upon absolutely unreliable folk traditions, which he found almost more than a millennium after the *mahaparinirvvana* of Gautama. A stupa has been identified on the authority of the Chinese pilgrim as the identical one erected by Maharaja Ajatasatru. But excavations by the late Raibahadur Dayaram Sahni revealed an image of Jina, below the so-called Mauryan stupa. The question whether it is really a Buddhist or Jaina stupa has not yet been settled. Instances are not rare of later Buddhists erecting their sacred edifices over Jaina remains. King Dharmmapala, as the Paharpur Copperplate of 119 Gupta era tells us, erected the Somapura Mahavihara over an earlier Jaina establishment. Therefore at Rajgir possiblity of stupas, *vathas* originally holy to the Jains but later on identified with Buddhism exists.

Jaina texts, of both the sects, amply give evidence of the existence of extreme holy places of Jainism at Rajgir. Gunasila Chaitya is a place, which was as holy to Jains, as Gridhakuta was to the Buddhists. According to the Kalpa Sutra, Mahavira resided at Rajgir at this very place. The Uvassgo Dasao locates Gunasila as a *varika* of Rajagriha (VIII,23). The chaitya has been explained as place of tree worship in the Mahabharatam, which is a trait of Indian ritual since the copper age. The *Tri-shashthi-salaka-purusha-charitra* states that Gunasila was *Chaitya-vrikshopasobhitam* (X 63.63). The Bhagavati Purana, however, places Gunasila within Rajgir, The *Sthaviravali Charitra* by Hemachandra Suri places Gunasila within (abhyarne) of Rajgir. The Uttara-purana of the Digamvaras places the permanent residence of Lord Mahavira on the Vipula hill. The Svetambara canon places Gunasila on the north-east of Rajgir which is the position of Vipula hill. I therefore think that Gunasila must be located at Rajgir on Vipula hill, and not at Gunave. Dr. B. C. Law suggests the identity of Gunasila with Kalasila rock in the neighbourhood of which Moggalana was beaten to death. But Kalasila according to Pali Suttas was a rock, while Gunasila was a chaitya.

In the third decade of the seventh century of the Christian era, Hiuenthsang testifies to the occupation of Rajgir sites by Jain monks.



He found Jaina monks practising asceticism beside a stupa on Vaibhara, probably the same site which has been identified by some scholars as the place at which the first Council of Buddhist elders met. Because the *Tri-shshthi-salaka-purusha-Charitra* (X.10.45) states that the great Sramana resided for a time on Vaibhara, the Vaihara of Mahabharatam and Vebhara of Isigilli Sutta. Therefore as late as c. 7th Century A.D., there was a Jain Stupa at Rajgir, on Vaibhara hill.

The existence of other Jain places of worship on the Vaibhara as early as the Gupta period, is proved by the inscribed black basalt image of the 22nd tirthankara Neminatha. It is one of the earliest known Jaina image in Magadha. The brick enclosure in the vicinity of ruined temple containing the above image along with other Jaina sculptures is another evidence. This enclosure contained a series of Jaina images in niches. The Son-Bhandar cave, excavated in Mauryan times but inscribed by later arrivals in characters of the Gupta period, is a Jain cave, like Dasaratha's gift to Ajivikas at Barabar. A revision indeed of our ascription of ancient buildings at Rajgir has become imperative.

—

Here are three books by Prof. R. S. Deshpande, B.E., B.S.E. (Retd.), A.M.I.E., that will help you immensely in solving your own particular problem of housing yourself and your family in comfort while saving you hundreds of rupees and guarding you against the pit-falls :

WHY NOT BUILD YOUR OWN HOME!

1. MODERN IDEAL HOMES FOR INDIA—With a foreword by Sir M. Visvesvaraya 350 pp. of art paper. 110 Plans of beautiful homes designed for Health and Comfort. Chapters on Architecture, Gardening, Furnishing, Interior Decoration, Colour Schemes, Heat and Sound proofing. Air conditioning, etc. Rs. 12-8, Postage Rs. 1-7.
2. BUILD YOUR OWN HOME—Guides a layman at every step in building his home. Rs 10 ; Postage Re. 1-4.
3. HOMES FOR MIDDLE CLASSES—4th Revised Edition Rs. 7, Postage Re. 1-1.

FOREIGN PERIODICALS

The Screen—A New "Blackboard" in British Schools

Lessons "come alive" and schoolchildren understand and remember them more easily when teachers can supplement explanations with visual impressions of the subject being taught. Only a few years ago, however, teachers were obliged to improvise nearly all their own visual aids. Many adults can certainly still remember their teachers using an orange, an apple and a lighted candle to give a crude, but effective demonstration of the relationship between the earth, the sun and the moon.

Today, with films, wall charts, filmstrips, models and special maps supplementing or replacing teacher-made devices, one of the countries giving a valuable lead, especially in the field of films, is Great Britain, where the development of such visual aids has been going on for many years.

The belief in the value of films as educational aids began to grow in Britain about 1920. Since then, the interest and activity shown by teachers' associations, education institutes and Local Education Authorities has encouraged film makers to produce material suitable for the school curriculum.

Further development is being made possible today through the National Committee for Visual Aids in Education, formed to plan and develop a visual aid policy for England and Wales, and the Educational Foundation for Visual Aids (E.F.V.A.) whose work includes the provision of information and facilities for educational authorities and teachers and help, in an advisory capacity, to sponsors and producers of new educational films.

Industry Helps Education

Educational film libraries have been set up by such bodies as the British Electrical Development Association, the Petroleum Film Bureau, the British Iron and Steel Federation, the International Wool Secretariat and the Tea Bureau. The first of these groups, for instance, has produced over 15 films dealing with the basic theories and principles of electricity. These ten-minute films explain in simple language the why and wherefore of electricity and its different applications in the home and in the factory. They are loaned to teachers together with detailed notes and questionnaires which help them to make the fullest use of the films as visual aids.

In all, 1,000 prints of 15 films are in constant circulation throughout the country today, and in the case of "Generation of Electricity' and "Transmission of Elertricity," 120 prints of each film have been made to meet the needs of schools and technical colleges.

An important contribution to the teaching of science and engineering has been made by the iron and steel industry. Films and filmstrips cover the obtaining of raw materials and the production of iron and steel. Area training officers in the steel industry use them for training apprentices, but they are also available to schools and technical colleges.

Wool has always played a large part in British national life. Accordingly, the industry has for years helped develop the use of visual aids for the teaching of economics, geography, chemistry, biology and domestic science. Similarly, the tea industry has done a great deal to instruct teachers in the use of visual aids and to provide schools with material which will enliven lessons on geography, history, transport and social customs. In addition to films, exhibitions are organised; cardboard models with sheets of cut-out figures made for children to assemble in the course of a lesson.

English in Six Weeks

Every kind of visual aid was mobilized by the National Coal Board in 1947 to meet a thorny problem —the teaching of thousands of foreigners from over twelve different language groups, enough English in six weeks to follow their training course in mining. Although the lessons were based on the "direct" method—the teacher speaking sentences for the pupils to repeat—filmstrips played an important part and were found to be useful because they forced the trainees to focus their attention on one picture at a time as it was projected on the screen. Films were found useful for revision and for dramatisation of normal straightforward conversation. Ordinary documentaries were used, but the sound track was replaced by a commentary which kept strictly to the language level reached by each particular group.

Among recently produced films dealing with language teaching was "La Famille Martin" which enables the pupil to see French characters talking naturally, and acting naturally as they do in everyday life. The tempo of the film is deliberately normal and not slowed up for fear of creating an artificial and erroneous impression.

Such films enable children who cannot hope to go overseas, to see other peoples' ways of life.

An outstanding achievement among films on physiology was "Digestion," because of its clear exposition of the entire digestive system, and for its painstaking degree of accuracy. Every muscle contraction is shown in animation. Colour is used to make every detail visible and intelligible. It is a fascinating production which makes the subject seem amazingly easy to understand.

Other Peoples' Problems

It is perhaps in the geography lesson that the film and filmstrip come into their own. And here remarkable results have been achieved. For example, children have always found it difficult to visualise the world and to understand the meaning of the lines drawn on the revolv-

ing globe. A series of films has been produced describing "Map Projection," "Latitude and Longitude" and "Day and Night." The last named, produced in colour, is exceptionally clever in its use of revolving models and ingenious lighting.

Geographical films, produced from an unbiased point of view, have done much to create a better understanding of other peoples' problems.

Every recent British production of geographical films and filmstrips has tried to do more than teach the children the bare facts. An attempt has been made to show people in other lands as real people, with families and homes. Hence, there is little generalisation. A filmstrip on Persian oil-fields, will take a specific Persian worker and tell the story of his daily life against a background of the oil-fields and will thus create an understanding of his problems.

Another pointer to a growing awareness of the international value of education is found in the efforts made to obtain foreign films for teaching in English schools. British producers and British teachers are looking across the seas for available material.

The day is fast approaching when such exchanges will be facilitated by the removal of customs barriers through two international agreements sponsored by Unesco. The first agreement would relieve educational films from licences, quotas and tariffs and the second (described on page 9 of this issue of the Courier) would also free the movement of films as well as other educational materials.

Such exchanges are expected to give an added incentive to commercial firms and industrialists willing to undertake the production of films for schools, by providing a wider market for their productions.—*Unesco Courier.*

Affandi—The People's Artist of Indonesia

A report on the exhibition (August 1950) of contemporary Indonesian arts at Delhi would be incomplete without giving some idea about Affandi, the noted Indonesian artist, whose contribution to the show had made the exhibition a great success.

Mr. Affandi, born at Cheribon, Java, is still in his early forties. With his unprepossessing features, glittering eyes and quite, almost timid manners, he does not easily attract attention. Not everybody will expect that behind this unassuming personality, lies a hidden force and a genius. When about eight months ago, he along with his wife and daughter came for the first time to Santiniketan on a Government of India scholarship supposed to learn the principles of art, Mr. Nandalal Bose, the head of this Institute of Art, was quite surprised to find his unassuming would-be-student already well developed. Mr. Bose did not expect this at all when he for the first time made acquaintance with him and when he saw Affandi's work, he expressed the opinion that it did not suit Affandi any more to go for lessons in art at Santiniketan. What Affandi needed was to make a study of Indian art, with all its early developments and present progress. This could be done by visiting art centres and coming in contact with Indian artists. That is the reason why Affandi after the Delhi exhibition, intends to make a tour of this country besides making the Indian public acquainted with his work and Indonesian popular art in general. For besides his collections, he has also taken with him some twenty-five paintings, sketches and reproductions of other notable Indonesian artists.

Affandi, like all other notable Indonesian artists of his time is the product of the Indonesian revolution. From his young days, he has displayed great interest and

talent in drawing and painting and sculpture. But miserable conditions during the alien colonial rule—so familiar in colonial and semicolonial countries—did not give the young promising artist full opportunities to unfold his talents. The only time he could devote wholly to his artistic inclinations was his spare time after a full day's hard work,- as house or letter painter or as primary school-teacher or ticket-seller of a cinema house. To improve his talents he tried to come in constant contact with other Indonesian artists, to learn something more from them. His first success was when he could sell his pictures for 10 to 20 guilders. The Indonesian revolution which swept like a mighty, unresistible flood over the Indonesian archipelago opened the way to the discovery of his talents, which led to his fame. Besides being a talented artist Affandi was a true patriot. He readily put his talents at the disposal of his fighting countrymen. Like the gun for the soldier. his brush was his weapon to fight against the reimposition of alien colonial rule. He made war posters and pictures to keep high the fighting spirit of his compatriots (these war pictures of his and those of his colleagues—once preserved in the National Museum and the War Museum in Jogjakarta—were destroyed during the Dutrh second "police action"). He and his family were arrested by the Dutch when after the first Dutch police action he tried to cross the border of the Dutch-held territories on his way from Jogja to Djakarta.

Since the once confused condition in Indonesia has now ended, Affandi has again started to devote his talents to more peaceful pictures, though not the least without social significance. The hard struggle for survival in his early life has had a deep influence on his work. His painting "A Dead Bird in My Hand," one of the finest pieces of his work, showing the cruelty of the human being towards the weak, and "The Three Beggars" show the profound humanity in this Indonesian artist. Like many of his colleagues, Affandi is a true people's artist. During the unsettled conditions in Indonesia he rallied other Indonesian artists around him and founded the Pelukis Ra'yat' or 'People's Artists' Association at Bandung. His colleagues imbued with the same spirit and ideals under the leadership of another noted Indonesian artist, Sudjoyono, started another art association called the 'Seniman Indonesia Muda' or 'Artists of the Young Indonesia.' Their aim and object was to break away from traditional Indonesian art and instead, find a new and true national art, as so far traditional Indonesian art had been more or less influenced by the West or constituted the ancient orthodox conception of paintings like most of the Balinese paintings. Saleh, the first notable Indonesian artist of the 19th century, received his training in Europe, so did many others, before World War II, get their inspiration from the West. Apart from this aim which has been in the minds of the contemporary Indonesian artists, their main objective has been to popularize art among the common people. This they opine cannot be done by degrading the art, but by making the people art-minded through holding free exhibitions at which the people see themselves pictured in the exhibits.

Affandi is thus one of the pioneers in the new school of Indonesian art. It is, therefore, this motive that inspires Affandi to choose as his subjects, scenes from the real everyday life of the common people,—like the peasant ploughing his field, and the way-side barber or the street musician, whether in Indonesia or in this country or anywhere else. Again it is this motive which makes his works—whether it is a painting, a sketch or sculpture—show lack of the usual sugary sentimentality, present in many works of art of the past and today, but realism which invigorates his art and gives it a deep social significance. One day when in the company of artists, he showed his painting called "People's Feet"—which seemed to have a rather disturbing and provoking effect on the audience—a friendly critic could not help remarking, "Isn't it odd? The feet seem to grow out of the soil." Affandi's face immediately lighted up. "That's it," he almost shouted, "that's what I wanted to say." His exclamation was revealing, it gives an idea of Affandi, and what he is after.

Today Affandi, practically untutored—and deeply under the influence of Vincent van Gogh—has worked out for himself a style and technique of his own. The strength of his powerful strokes done with impatient quickness is supported by a complete mastery of drawing, which enables him to tackle any subject—human figures, animals, trees, houses—with perfect ease. He has displayed a gift of animation—almost approaching Van Gogh—in making creative use of yellow and green. His portrait paintings are not only excellent likenesses but also full of character, though the brush strokes are laid on with almost violent quickness his paintings can be described as sketching with colour. The average time he needs to make a portrait painting is between 6 and 7 hours only. But Affandi is not free from criticism. One art-critic said that in his over-confidence, Affandi carried the 'vortex painting' (cruel suns) too far, giving the picture an impression of artificiality. While another remarked, that his two pictures "Gossip" showed failure in impressionism. But whatever his few defects and failures may be, the recent Delhi exhibition has revealed that Affandi—as a notable art-critic of the city remarked—is "a divinely gifted, self-taught genius."—*Merdeka*, August 1950.

The Bimillenary of Paris

This year, Paris is 2,000 years old. The first written record of its existence appears in Julius Caesar's commentaries on the Gallic Wars which date from 51 B.C. In actual fact, it is impossible to know the exact age of Paris, for its earliest origins are lost in antiquity. There seem always to have been settlements on the Ile de la Cite (Island of the City), an island in the Seine and it is from these modest beginnings that has sprung our beautiful, modern, artistic City of Light.

Paris owes its existence to the Seine on which it stands. It springs from the bosom of the river and it is the river that gives it its particular character. The City of Paris takes its Coat of Arms from the river; it is a ship that never sinks. Its motto *Fluctuat nec mergitur* is more than apt, for its long and tumultuous history has often proved that the city cannot be submerged; it survives all vicissitudes.

If Paris can find no trace of itself in ancient history, legend gives it a most romantic origin. In the days of Mythology when gods and nymphs familiarly walked the earth, the goddess of the Seine was reputed to be the most beautiful of the daughters of Bacchus. Her godmother, Ceres, gave her as a present the fields of Normandy that lay along her banks, but one day, as the goddess was playing among the reeds, Neptune spied her. Dazzled by her beauty, the God of the Sea rushed to seize her. The goddess fled, but soon she felt that she would be caught. She called upon Bacchus, her father, and the fair Ceres, her godmother, to save her, and just as Neptune thrust his arms out to reach for her, the nymph dissolved, slipped through his fingers and the Seine flowed away from him, her light coloured veils turning into the emerald waves of our beloved river.

The historical record of the city is interesting. A tribe of Gauls known as the Parisii had settled in the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

islands of Lutetia, now known as the Ile de la Cite. It is likely that some of them also dwelt on the neighbouring hills of Montmartre and Sainte Genevieve. In 59 B.C., the Roman Senate entrusted the pacification of Transalpine Gaul to Julius Caesar, the Roman Consul. He was well aware of the experience of his predecessors, Domitius, Marius and Fonteius, in their attempts to subjugate these "frivolous" Gauls, he knew their powers of resistance, he recognized in the hearts of these Celts "the love of liberty and the hatred of servitude." This made him all the more anxious to bring the Gallic chiefs to Rome as prisoners.

The enterprise proved far more arduous and exacting than he had anticipated. From 58 B.C. to 51 B.C. fighting was incessant. Again and again Caesar thought he had subdued Gaul, again and again opposition reared its head, local guerillas sprang up, revolt spread throughout the land, led in 52 B.C. by King Vercingetorix, chief of the Gallic tribes.

Caesar sent his most able lieutenant, Labienus, to occupy Lutetia. In a wild dash, the latter came down the left bank of the Seine, but failed to cross it. Seizing all the boats he could find, he sailed down the river and landed on the right bank facing Lutetia. The old chief, Camulogenus, was leaving and crossing to the other bank of the Seine. The reason was soon obvious. From where the Romans stood, on the present site of the Church of Saint Germain l'Auxerrois, they realized that Lutetia was in flames.

Nevertheless, the conquerors soon settled down, restored and revived the city. Soon they introduced their own way of life and an important suburb grew up on the left bank. Its ruins and remains still exist in Paris today.

Paris was a flourishing city when in the middle of the 5th century A.D. it was threatened by Attila and his Barbarians. All hope had been abandoned when a young girl called Genevieve roused the flagging spirits of the Parisians, restored their courage and thus averted catastrophe. She became the Patron Saint of Paris.

Later came the Franks, but by then, Christianity had already spread fairly widely and the worst consequences of the invasion were avoided. The Carolingian kings did not usually reside in Paris, and during the invasions of the Northmen, the City was almost completely destroyed. All the inhabitants could save was their honour.

Through its Counts and Dukes, Paris gave to France its Capetian dynasty, and since that time, Paris has been the capital of the country. Churches, convents, markets, hotels were built; in the 12th century, public works were undertaken to improve the city; municipal administration was organized. The city grew and soon had to spread on either bank of the river.

In the reign of Philippe Auguste (1180-1223), the streets were paved, the Palace of the Louvre was begun and the Cathedral of Notre Dame was completed. Later came Saint Louis who endowed Paris with its University, the Sorbonne and the exquisitely beautiful Church of the Sainte Chapelle.

The wars of the 14th and 15th centuries did not interrupt the development of the capital. The Palace of the Louvre was finished, the Bastille was built.

The reign of Charles VI was one of the most disastrous in the history of Paris. The city was betrayed to the Burgundians, and in vain did Joan of Arc besiege it in 1429. Wounded during an assault at the Saint Honore Gate, which is now the Place du Theatre Francais, she was forced to withdraw. Nevertheless, she was instrumental in freeing her country from its invaders, and in 1436, Charles VII was able to return to the capital.

Had there been no Religious Wars, the 16th century would have been a highly prosperous period for Paris. Francis I and Catherine Medici were great builders. In the succeeding reigns, Paris was the scene of one continuous bloodstained drama until Henry IV was able to pacify it after a siege lasting four years. His son, Louis XIII, and his wife Anne of Austria endowed the capital with many monuments.

The Sun King, Louis XIV, preferred to live at Versailles or Marly rather than Paris, but that did not prevent his developing the city whose population already numbered 550,000 and building monuments worthy of his greatness in it. To him we owe the construction of the beautiful palaces around the Place de la Concorde, planned by the famous architect Gabriel.

The French Revolution took place in 1789 and can be said to have been eminently Parisian for its origins are essentially Parisian, yet it is from this epoch that the history of Paris ceases to be separate from that of the rest of France.

Previously, Paris had been divided into 48 sections, but under the Directory, it was divided into 12 municipal districts called "arrondissements" and the Constitution of the Year VIII of the Revolution gave the capital its present status as a "prefecture."

From Napoleon I date the Bourse, the Vendome Column, the Arc de Triomphe, many bridges and many other embellishments. The growing prosperity of Paris was only slightly affected by the invasions and resistance of 1814-1815.

Under the Restoration, Parisians fought for the Tricolour in July 1830 and thus decided their future fate. Louis Philippe was keenly interested in seeing Paris develop and he erected its fortifications and its first railway station.

Napoleon III and his counsellors took great pride in beautifying the city, while the Chief Commissioner, Haussmann, opened wide avenues with lovely perspectives through it. From 1860, the suburbs that had grown up within the fortifications were officially included in the city and thus the number of "arrondissements" rose to twenty.

The war of 1870 brought the German army to Paris, and after its surrender it endured humiliating occupation. Then came the civil war known as the Commune, but 1871 saw the establishment of the Third Republic and the ushering in of a period of peace and prosperity, with the development and improvement of the city, and a comfortable and brilliant life that lasted till 1914.

During the First World War, Paris was saved from destruction by its Governor, General Gallieni, who raised the Army of Paris, and transported it to the battlefields of Ourcq and the Marne in taxis. After the war, Paris again took up its schemes for town planning and development.

On the 14th June 1940, Paris was occupied by the Germans and for four years the latter had to contend with an underground opposition that burst into open rebellion on the 19th August, 1944, following the landing of the Allied troops on French soil. On the 24th August, 1944, the capital was finally liberated by the arrival of the troops of General Leclerc's division.

To celebrate its bimillenary, Paris has not organized excessively elaborate demonstrations. Parisians have tried to pay homage to their city by conjuring up the most striking periods in the history.—*News from France*, August 1951.

Heavyweight Champion Calls on President Truman

Washington, August 20.—"Jersey Joe" Walcott, world heavyweight boxing champion, called on President Truman at the White House late last week.

The 37-year-old fighter who won the title several weeks ago by knocking out Ezzard Charles, came to Washington to referee a boxing show. The show was held for the benefit of the Washington Junior Police and Citizens' Corps sponsored by the Washington metropolitan police in their work to help boys' clubs.

Walcott has always been interested in youth work and is contributing his own time and money to further this type of endeavour throughout the country.

The President praised Walcott for his prowess in the ring and for his interest in youth activities.—*USIS*.

"I Can Make You a Master Writer and a Convincing Speaker!"

—GRENVILLE KLEISER, Famous Speech Specialist

Whatever your business or occupation you need a command of the English language to be successful. It will bring you to the forefront and will help you, as no other single thing can, to reach the goal of your desires and achieve success.

Years of study and experience have enabled Mr. Grenville Kleiser to formulate a course of lessons in Practical English which has been universally admitted to be superior to any instruction hitherto offered on this subject. It enables you by post, in your spare moments at home, to—

Enlarge Your Vocabulary by Thousands of Words;
Use the Right Word in the Right Place;
Correct all Errors of Grammar, Idiom and Diction;
Develop Originality of Style and Expression;
Write Tactful and Forceful Letters, Essays, Advertisements, Articles, Stories, Reports and other Compositions;
Become an Engaging Conversationist and Be Popular in Good Society;
Be a Person of Culture, Power, and Influence;
Earn More Money and Get Better Position.

If it is your ambition to become a forceful effective speaker, enrol yourself for Grenville Kleiser's Mail Course in **Public Speaking & Development of Personal Power.** It will enable you to—

Conquer Timidity and Fear;
Banish "Stage Fright" & Nervousness;
Acquire Poise and Self-Confidence;
Develop Charm and Personality;
Grip and Hold Attention;
Argue Effectively and Winningly;
Talk Convincingly & Be Successful;
Be a Centre of Attraction in Social Gatherings;
Address Meetings and Sway All by Forceful Speech;
Become a Living Force and Win Admiration.

This Course will bring out the best that is in you, by making you a positive, clear-cut, convincing thinker and speaker. Nothing like it is available anywhere in India or abroad.

WRITE TODAY FOR FULL FREE PARTICULARS

There is absolutely no uncertainty—no guesswork—about Mr. Kleiser's methods. He has had years of experience in leading educational institutions and is generally recognised as the foremost teacher of speech culture and English by post. He has had under his tutelage many of the best known men in the public eye. His Mail Courses are his life work. They are for every ambitious man and woman who would use the English language for all one is worth in business and social life. We shall be glad to explain any of these two Courses to you. Send us the coupon above or write for full particulars, enclosing two annas in stamps. Will you do it TO-DAY?

I may be young...!

...but I know what I like when it comes to the simple things of life. There are few idle moments in my day, for I work hard and play hard, but when I do relax, I feel I have earned it. That is the time I enjoy a cup of tea, and even in my limited experience, I know there is nothing I like better to refresh me. Tea has such a lovely, clean taste. My mother was certainly right when she told me we were the luckiest people to have tea as our national drink!

ROUND THE WORLD

By Mr. J. N. SINHA

(Assistant Conservator of Forests, Bihar)

A most interesting travel book that reads like a novel—valuable and instructive information of the world in the language of story book. The different customs of foreign people, their manners and outlook, are delicately mingled with humorous and entertaining anecdotes.

"There is a certain distinctiveness about the book which sharply marks it off from the ordinary travel tales of this kind."
—*Hindusthan Standard*

"The volume is a record of first-hand experiences in various countries of the world, and is full of information which a large public ought to know."
—*Amrita Bazar Patrika*

34 Photographs & 3 Maps :: 2nd Edition—Price Rs. 7-8

PRABUDDHA BHARATA
Or
AWAKENED INDIA

(Started by SWAMI VIVEKANANDA in 1896)

The Premier English monthly conducted by the Monks of the Ramakrishna Mission, devoted to universal religion and comparative philosophy; keeps its reader in touch with the cultural side of Indian national life, both ancient and modern.

57th year begins from January, 1952.

RABINDRANATH TAGORE: "Admire its writings as contributions to pure Indian culture."

DR. S. RADHAKRISHNAN: "I have been a regular reader of PRABUDDHA BHARATA and can say that its sanity in dealing with religious doctrine and discipline has been its most impressive characteristic."

COUNT HERMANN KEYSERLING: "I think PRABUDDHA BHARATA is one of the most interesting and important magazines that one can find today in any country."

Annual Subscription: Inland Rs. 5, Burma Rs. 6, Foreign 14 sh., U.S. $4.

P-26, Raja Basanta Roy Road,
CALCUTTA.

"Among the makers of modern Bengal Ramananda Babu will always occupy an honoured place. × × × Like Tagore's the late Mr. Chatterjee's genius was essentially constructive. × × By publishing this engrossing biography of her father, Srijukta Santa Devi has done a great service to Bengal and derivatively to the whole country. × × No one could have written a biography of Ramananda Babu as she has done. It will certainly remain a source book for future writers and students."

—*Hindusthan Standard.*

"An authentic and highly interesting biography in Bengali of the late Ramananda Chattopadhyaya. × × The life story of such a man is naturally linked up with the main currents of contemporary national history and we are glad to note that the author has adequately covered this wider background in delineating the individual's life. The style is restrained and has a homely grace, and a number of fine photographs have greatly enhanced the value of the volume. We are sure the book will be read with profit by those who wish to study the currents and cross-currents of Bengal's history for the last half a century with which Ramananda was intimately associated."

THE MODERN REVIEW

DECEMBER 1951

VOL. LXXXX, No. 6 WHOLE No. 540

NOTES

The Congress Election Campaign

In last month's editorials we wrote,

"We do not know whether Pandit Nehru realizes that he is on trial. We do not refer to the elections. Our Nationals are backward in their ideas of exercising the franchise, which is a direct consequence of the low level of literacy—less than 25 per cent—in the country. Elections are a gamble therefore. . . ."

Judging by Pandit Nehru's campaigning speeches he is still unaware of the fact that he—more than the Congress—is on trial. We shall deal with that later. But the elections are now as much of a gamble as it was a month back. Further, the jockeying for power in the ranks of the dozen or so of the parties in opposition has bettered the chances of the Congress. The strength and the weakness of the Congress are both demonstrated thereby. The strength lies in the unitary organization which, however decrepit and shaky, still stands the country over, and the weakness in the definite exhibition of distrust displayed by the intelligentsia, as evinced by the total volume and number of the independents and parties in opposition.

The Congress has chosen its symbol well. It evidently believes it would be able to lead the illiterate or partly literate masses to the polls, like the yoked bullocks in the Congress symbol. It only needs the picture of a man with a Gandhi-cap twisting the tails of the bullocks and driving them to the polling booths, to complete the simile.

The Congress has made many declarations of faith in the past and Pandit Nehru's particular coterie, which is almost a caucus, has added promises galore before and after coming to power. All these have been observed in the breach mostly, after the passing of the Father of the Nation. We have therefore to examine carefully all the protestations of the mighty in the Congress, now that the elections are on. We will say in passing that whatever criticism we make, these do not bear any reference either to Mahatma Gandhi or his great disciple Sardar Vallabbhai Patel. We refer to the more ornate and immensely loquacious mantle-wearers and shoe-steppers.

The Congress manifestoes released in our home-province, or State, bear the following claims and promises. The claims are:

1. *That it was instrumental in the termination of British Rule and in the achievement of Freedom for India.*

We do agree that Congress, starting from its inception in the eighties of the last century, achieved much of it, and that Mahatma Gandhi was the Man of the Hour. But those that are claiming that they did it by themselves are uttering less than half-truths. The I. N. A. movement of Netaji Subhas was the greatest factor in the disaffection of the British organised Indian army, and that ultimately led to the British decision, as did the underground movement by the Socialists and other groups, who are all outside the present Congress.

2. It claims *that it has consolidated the intransigent Native States firmly into the Union of India.*

We admit that Sardar Patel's achievement was great, but we say it now, that a whole host of others, mostly from outside the Congress ranks, helped and their share of credit is being hi-jacked by the present dictators of the Congress.

3. It claims *that it has planned and legislated for Zemindary abolition and the distribution of land amongst the real cultivators.*

It is an well-established fact that the decisions involved were arrived at long before the Congress came to power, and if any credit belongs anywhere, it should go as much to the Leftist groups, as to the present arbiters of the Congress.

4. It claims *that it has successfully carried out programme in spite of great shortage of Food.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

We admit that it has succeeded where the British failed miserably. *But the immense expenditure of assets, the enormous wastages and the resultant cataclysmic corruption that has infected the entire administration,* are the price the people have to pay. What has the Congress to say to that?

5. It claims *that it has, and is, Rehabilitating Refugees successfully in a planned fashion.*

What caused the refugee problem? As for rehabilitation, the less said the better, where planning, costs and morals involved are concerned.

6. It claims *that it has given Universal Suffrage.*

It has, and let us see the outcome!

7. It claims *that it is giving the country, planned Compulsory Primary Education.*

Seeing whom the Congress has put in charge of those plans, we can only treat this statement as a joke, which would be comic if it were not so tragic.

8. It claims *that it has started Prohibition.*

It has, but as yet the issue is not clear.

9. It claims *that it has started Great Schemes for Irrigation and Food production.*

The truth is that the schemes were planned by the American specialists before the Congress came into power. That John Matthai as Finance Minister did his best to see that they materialize and after John Matthai was obliged to quit the Ministry, his successor, Pandit Nehru's man, *has done his level best to scotch at least two of the major schemes in the most afflicted area.* Incidentally this Minister has been allowed to stand as an independent, and *John Matthai's nomination paper was rejected!*

10. It claims *that it has established a secular State.*

If it pleases our fetish-worshipping Prime Minister and his satellites, who are more intent on shibboleths than on realities, we shall concede this. But we would advise them to read Dr. Katju's letter to the *Times,* reproduced elsewhere in these Notes.

11. It claims *that it has abolished untouchability.*

This is the gift of the Father of the Nation to his peoples. His unworthy successors would be presumptuous to claim it.

So much for the claims. Now come the pledges and promises. We shall declare right at the start that if Pandit Nehru had kept his promise to the Nation, that of giving nominations only to men of integrity and moral fibre, then these promises would have had some substance. Judging by what he, and his satellites, have done, the least we can say is that these pledges are of the same substance as dreams are!

The Congress pledges itself to bring the millennium in the land if its Nationals put it back in power for the next five years. It did promise so in August 1947, and who is there in this sub-continent of ours, big and small, who does not feel in his very bones as to how those promises were kept in the four years passed? Who that is, excepting the Corrupt, the Black-marketeer and the Political Adventurer?

The Congress promises amongst other things to "Free the people from Want" and to substantially raise the national standard of Health and Education. In view of what has been done in the last four years, we are tempted to term these promises as frivolous. But maybe that Pandit Nehru imagines that he has the powers of a Messiah or a Mahdi, and that he will be able to encompass a miracle even though the forces of corruption and immorality within the Congress has been far enhanced by some new nominations!

The Congress renews its pledge regarding *Refugee Rehabilitation and Linguistic Provinces.* From our direct experience in both these matters, so far as West Bengal and the Bengali race is concerned, and judging by the treatment meted out to all Bengalis by our "brothers" in Bihar and Assam, we have no hesitation in declaring this pledge as dishonest.

The Congress has made great play with its much vaunted Five-Year Plan. This, and all such schemes, could only materialize if the Congress had first of all enforced a Reform plan within its ranks. It is true that a few good men have been brought in, here and there, in the Congress ranks. But one swallow does not make a summer, nor do half a dozen or so. We have nothing to say against these well-intentioned gentlemen who have been inveigled into accepting Congress nominations. But we have no illusions regarding the powers of those few and so we have little hopes about their ability to transform the forces of corruption and immorality that have further entrenched themselves within the ranks of the Congress.

Pandit Nehru's Electioneering

We have our position clear regarding Congress claims and promises in the previous note. We present here some extracts from Pandit Nehru's speeches and one from Sri Gadgil. There are some confessions which would be all to the good if they are sincere.

Addressing his first election meeting in Travancore Sri Nehru said he had accepted the responsibility of Congress Presidentship because he felt it would be wrong for him to run away from it. "I accepted the responsibility for the time being, realizing that the Congress is not functioning as we wanted it to.

"The Congress is not me or any group of persons, but is a force—a great movement of the Indian people. Unfortunately because of circumstances, the intimate contact, which should always remain with the people, has been weakened. I know that and I am sorry for that but we have to revive it."

It was not possible to combine the work of the coming elections and the reorganisation of the Con-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

gress. Therefore, he had come to the conclusion that the work must be taken in hand after the elections were over.

Speaking of the Congress election manifesto, Sri Nehru said it was easy to write down anything and shout slogans. "We wanted to be practical and realistic and, at the same time, as idealistic as possible. We have put forward what we have considered a realistic programme in our manifesto."

Shri Nehru stated at Madras on the 27th November that he would set about "in right earnest" reorganising the Congress—"not superficially but from below" —after the elections.

"I can do it effectively only if the Congress wins the elections," he said. "Though the Congress might have fallen into error here and there and though in many places it was in the hands of cliques and groups which weakened the organisation, the mission of the Congress is not yet over. It is the only organisation with a positive programme."

Referring to the Congress Organisation, Shri Nehru said that the Congress was evolved after generations of good work and it had got into the heart of the people and it had survived all disasters and powerful enemies. It was true that the Congress got entangled into small things forgetting its objects. It went far off from the people and worked in groups and factious spirit.

Shri Nehru stated that the Congress which was working in the Socialist direction had to go much that way, because, after the independence forces of reaction had stood against many economic programmes and plans. The Congress had to fight till the darkest forces of reaction which culminated in the assassination of Gandhiji were uprooted. The Congress had been weakened in spirit by these prevailing forces. Here he narrated how he had to "entangle himself in the Congress organisation" of which he became the President. "I took it up in earnest and I will work in earnest to fight the reactionary forces."

Sri Nehru deplored in strong terms the continuance of Madras Muslim League. He warned Madras Muslims that they were ill-serving their own community.

Pandit Nehru failed to tell the Muslim Leaguers in Madras that all would be well if they followed the example of some notorious Muslim Leaguers and communalists in West Bengal and accepted Congress domination.

Shri Nehru described the alliance of the Socialist Party with Dr. Ambedkar's Scheduled Caste Federation as a "strange and extraordinary combination."

The Congress President was amused at the Socialists' criticism that the Congress had become the "Conservative Party" of India. "Shri Jawaharlal Nehru is Winston Churchill, they say," he said. "Mr. Churchill is a very great man, misguided in the past in regard to India, but very great."

Shri N. V. Gadgil, the Union Works Minister, speaking at an election meeting in Poona said a vote for the Congress Party in the ensuing general elections would ensue ordered progress while a vote for the others would mean increased disorder and perhaps disaster.

While admitting that two parties the one in power and the other in opposition, were essential for a sound working of democracy, Shri Gadgil, who was addressing the cantonment association, put two questions. Do you want to have in our country conditions similar to those existing in France at present, where the governments are extremely unstable *or do we want to put in proper one party, which will enjoy the majority for another five years?*

In the interest of democracy, Shri Gadgil said, the failures and shortcomings of the Congress Party should be forgotten for the time being. He admitted that the Congress Party had made mistakes sometimes, but, he felt that India should have the Congress Government in power for at least another five to ten years.

Shri Asoka Mehta, General Secretary, Socialist Party, in reply to Shri Jawaharlal Nehru's remarks at Madras on November 27 last about the Socialist Party's alliance with the Scheduled Castes Federation, says that the Socialist Party has been interested for a long time in a closer understanding, and possibly integration, with the Scheduled Castes and Scheduled Tribes. That such an understanding, both with the Scheduled Castes Federation and Adivasi Mahasabha could be reached only on the eve of the elections was an accident.

Shri Mehta adds: "I repeat that it is not a mere election agreement. The Socialist movement in India must draw to it the support of the submerged sections of our people.

"The basic agreement that we have with the submerged people and their organisations is that in India today we have to work for structural changes and not mere functional adjustments. It is here that a dividing line separates the Socialist Party, the Scheduled Castes Federation and the Adivasi Mahasabha from the Conservative Congress that Pandit Nehru leads today."

India's Foreign Policy

There has been some speculation of late, amongst informed circles, regarding the foreign policy of Pandit Nehru and his advisers. Mr. D. F. Karaka, writing in the November 28th issue of *The Current*, assumes that a new orientation has occurred due to the causes as tabled by him. We are unable to confirm his statement, as the situation has not crystallised as yet, but there are straws in the wind, nevertheless, which indicate some change:

Observers close to Pandit Nehru, indicate that a perceptible change has occurred in the last few months

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in our foreign policy, the sole architect of which is Nehru himself.

The hysterical rush towards Communism and its satellites has been stemmed; the hitherto unnecessarily aggressive attitude towards America and the Western Democracies has been halted. From an unreal neutrality which appeared to favour Soviet Russia and Red China on every vital issue, Pandit Nehru has plotted a new middle course: a real, balanced, defensive neutrality which while it does not hitch India to the American star, does not preclude a smooth, working arrangement with that power and the promotion of mutual respect between the two peoples.

This is perhaps the most important change that has occurred in India, and in Asia, since the Communist exploitation of Asian nationalist sentiments the effects of which are clearly seen in many Far Eastern countries.

The most important factor responsible for this change is the realisation which has come to Pandit Nehru of the true import of Soviet aims in Asia as different from their protestations.

The following factors have contributed to that realisation:

(1) The authentic evidence of and concerning Korea;
(2) The violation by the Chinese of our territorial integrity and Mao's challenge to Nehru's leadership of Asia;
(3) The change in the tone of the confidential reports of Sardar Panikkar from Peking;
(4) The circumstances in which our diplomatic mission "dissolved" in Gyantse;
(5) The confidential reports and conversations with men like Sir Benegal Rama Rau, recently returned from the U. S. who must have informed Nehru of the genuine goodwill for India still existing in the American circles that matter;
(6) The tactful, firm but friendly and patient attitude of America's recent Ambassadors to India, Dr. Henry F. Grady and Mr. Loy Henderson;
(7) The unmistakable evidence produced almost daily by our Military Intelligence of the activities of the Kremlin's Agents and Red Chinese fellow-travellers.

The situation in Tibet, following the Chinese *coup*, is clearly indicated in the following news item which recently appeared in the daily press:

The Tibetan Government has, with the approval of the National Assembly (Tsongdu), which met earlier this month, ratified the Sino-Tibetan Treaty signed on May 23 in Peking, according to a report from Lhasa.

Three high emissaries from the Panchen Lama have arrived in Lhasa with valuable gifts and ceremonial scarves for the Dalai Lama. The Panchen Lama is expected to reach the Tibetan capital by the end of December on his way to Shigatse. His caravan, comprising 1,500 camels and 600 mules, will be escorted by 2,000 Chinese cavalry.

A high Chinese official, Mr. Tung Ko-ha, has arrived in Lhasa with 2,000 more Chinese troops. One thousand soldiers from the Lhasa Garrison have been despatched to Shigatse, 57 miles west of Gyantse.

With the arrival of 500 Chinese soldiers at Gyantse earlier this week the prices of commodities have gone up in Tibet's third largest town owing to the liberal circulation of silver dollars by the Chinese in payment of services and supplies. Rice has been imported from Bhutan at Rs 100 per maund. Daily arrival of more troops in Gyantse is expected.

The Tibetan authorities at Gyantse will every week bring 600 maunds of firewood from Shigatse for the Chinese troops who have refused to use yakdung as fuel.

Chinese officers have selected the largest house in the town belonging to Tibetan officials for their headquarters. They have also requisitioned 48 other houses for Chinese troops. Later they will disperse along the Indo-Tibetan tarde route to occupy the trade centres of Phari and Yatung. They will also re-establish the checkposts, on Tibet's southern frontier, held by the Chinese in 1910, prior to the Chinese evacuation of Tibet on the return from exile in India of the 13th Dalai Lama.

American friendliness is being evinced at a high level now as the following news items would show. Appreciation of such concrete sympathy will duly mature as the public come to know:

Dr. Bryce De-Witt, a distinguished physicist, who during World War II was engaged on a research project at the atomic bomb plant in California, U.S.A., is now in India as a visiting professor at the Tata Institute of Fundamental Research, Bombay.

He is here under a Fulbright grant on the invitation of Professor H. J. Bhabha, Director of the Institute, with whom he is collaborating on a special research project.

During his proposed one-year stay at the Institute Dr. DeWitt is scheduled to deliver a series of lectures to advanced students in the field of pure physics.

In 1949-50, Dr. DeWitt was a member of the School of Mathematics, Institute of Advanced Study, Princeton University, and was the National Research Council's post-doctoral fellow in 1950. In the same year he took his Ph.D. at Harvard University.

India has received substantial help in the past, from American specialists in the River Valley schemes. Fresh aid in the same form is in the offing, in a more tangible form, as the following news-item goes to show:

The U. S. Reclamation Bureau has announced that arrangements are being made whereby five American engineering specialists will be sent to India to assist in the development of India's water and power resources.

The specialists will include a dam engineer, a construction engineer, a concrete control specialist, a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

mechanical engineer and an electrical engineer. They will leave for India early next year, and are expected to remain in the country from two to three years.

The specialists will "provide technical service and consultation" to the Indian Government and will have "consultative and technical authority, but no administrative authority," the Bureau said.

The U. S. Technical Co-operation Administration (Point Four) will pay the experts' salaries.

The Persian Tangle

There seems to be little hope as yet of the solution of the Anglo-Iranian dispute, once the oil-fields and the refineries of the Anglo-Iranian Oil Company.

All attempts at mediation from diplomatic angles having failed, and there being little hopes of the *impasse* being resolved after the fruitless termination of Dr. Mossadiq's mission, a new attempt is being made from an economic angle. Whatever the results, the attempt should be welcomed, for as time passes the situation becomes even more desperate.

The World Bank announced in a formal statement in Washington on 20th November that it would be willing to consider any proposal under which it might assist in reaching a solution of the oil dispute.

The Bank said it could enter into oil negotiations only if asked by both Britain and Persia. But the management would be willing to consider any proposal which offered some prospect of success in breaking the deadlock.

"Suggestions have been made to the management of the Bank from several sources that it might be able in some manner to assist in a solution of the Persian oil problem," it said.

"Naturally the management would be willing to consider any proposal whereby the Bank might effectively assist in the solution of an important problem that directly affects two of its members and indirectly a number of others.

"However, before the Bank could take any positive official action, it would have to be requested to do so by both Governments involved and no such requests have been received."

World Bank chiefs are understood to be examining the plan sympathetically and have already studied their statutes to see if there are any legal snags.

If Britain, Persia and the Bank accept the plan the whole operation of extracting and refining oil from Southern Persia would be done in the name of the Bank. The oil would also be sold in its name.

The Bank would be responsible for earmarking a share of the proceeds—25 per cent has been suggested—as compensation to the Anglo-Iranian Oil Company for Persia's nationalization of the industry. It would administer the rest of the income for the Persian National Oil Company.

Britain's Charge d'Affaires in Teheran, on 21st November, presented to the Persian Acting Prime Minister and Foreign Minister, Mr. Kazemi, a copy of Mr. Eden's recent statement on Persia.

The Persian Premier, Dr. Mossadiq, said over the Egyptian radio network last night: "Persia supports Egypt in her holy national struggle."

The Persian Government will send a plane to Cairo on 22nd November to bring Dr. Mossadiq home, according to usually well-informed sources in Teheran He is expected to be in Teheran on Friday.

The Bank Rate

The Bank of England's decision to raise the bank rate, has been followed by the Reserve Bank of India which has made an announcement of a similar rise in its rate. This decision has come as shock and a surprise. The increase in the Indian bank rate from 3 to 3½ per cent together with the withdrawal of the Reserve Bank's support to Government of India Securities has come with the declared intention of fighting inflation. Some people in the financial circles have all along held the view that the Reserve Bank of India and the Finance Ministry have, in their attempts to check inflation, not been utilising monetary and credit controls to the extent possible. There have always been men who differed. In their view, the more imperative need in India was price control and expansion of production. India for some more time to come should have followed a cheap money policy. The major sector of the Indian money market is, unlike England, unorganised. Alteration of Bank rate produces results as anticipated only in a country where an organised money market exists. In our monetary policy, specially at the present moment, nothing should be done which can be utilised as a handle for increasing costs and decreasing production. We desperately need lower costs and higher production. The action of the Reserve Bank in increasing the Bank rate has produced a result exactly opposite of what was anticipated. In addition, this action, followed by subsequent announcements of the Reserve Bank, has introduced an element of uncertainty in the money market which has already produced a very damaging effect on our economic field. It has been rightly criticised in financial circles that the Reserve Bank's attempts at justifying the measures it took for raising the value of money betray a lack of proper appreciation of the rights and privileges of a central banking institution. The markets are almost unanimous on this point, some have gone so far as to dub the Reserve Bank's action as amateurish. Firstly, there was no need for the long press note the Reserve Bank issued explaining the reasons for raising the Bank rate and trying to show that its action was independent of the Bank of England's decision, where a brief press note could have been sufficient. If any explanation was considered necessary at all, it should have come from the Finance Ministry. The Reserve Bank is now a nationalised institution and thus has no power to lay

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

down policies independently of the Finance Ministry. But even more tactless was its supplementary press note conveying the Reserve Bank's decision to withdraw its support from the market. It is the accepted practice of the Central Bank of a country not to disclose its intentions about open market operation by public announcements. Its intention is indicated in its actions. This announcement has caused much panic in the money market which could be avoided.

In Britain, the inflation today is essentially a product of Government policy in superimposing a large rearmament programme on an already fully-employed economy. They have a case for applying restrictions selectively. The weapon of Bank rate alone cannot do this. The Chancellor, therefore, has confined his increase to a token amount, stiffening up the short-term market structure a little to indicate that money would not be so easy henceforth. But so far as the economy of the country particularly in industry is concerned, the practical effects must flow from any consequent action applied by the joint stock banks in their loan policies. In India, we have not reached anywhere within miles of a state of full employment. We have no rearmament programme even distantly resembling that of Britain. In addition, more than three-fourths of our money market is unorganised and outside the control of the Reserve Bank, being unresponsive to policies laid down by that body. In the industrial sphere we have little to select for applying restriction, while in our agricultural sphere we desperately need more money at cheaper rates of interest. We fail to understand how our Financial experts expect to obtain the same results in a country where the economy is predominantly agricultural by copying the financial policies of a highly industrialised nation. Such a policy is bound to produce very bad results in an agricultural country. Here, taking advantage of the higher bank rates the rates of indigenous finance will move up and therefore agricultural costs of production and movement will also rise and would thus make for higher costs of production. As the Governor of the Reserve Bank, the present Finance Minister wrongly advised the then Finance Ministry on devaluation which cost the nation tremendously in money and prestige. Now he has committed another blunder which has severely struck Government of India's credit at its very root.

Hinduism and the State

It has been the practice amongst a certain type of newspapers abroad to give vent to their anti-Indian feelings under any guise whatsoever. The *Times* of London has been lately thus conducting a campaign against India, the main argument being directed against the possibility of a secular State being firmly established in India. It is in reality a veiled attempt at the justification of the "two-nation" theory of the Muslim League.

The following letter written by Dr. Kailasnath Katju, exposes the hollowness of the arguments advanced. Besides contradicting the false propaganda launched by the *Times*, this letter should also serve to educate the more ignorant amongst our politicians who are in the habit of decrying all things "Hindu" under completely mistaken assumptions that Hinduism means fanaticism or orthodoxy of the nature of Islamic or Catholic bigots:

"Sir,—Your recent leading articles indicate the opinion that Hinduism and a secular State cannot go together. I suggest that your view proceeds upon an incorrect appreciation of the basic doctrines of Hinduism. In western Europe and America, professedly, the entire social structure is founded upon Christian faith and civilization. In the past the State discriminated between Jews, Catholics, Protestants, and other Christian groups; there were inquisitions and persecutions, and in England Catholics were excluded from public employment. Today law has abolished these discriminations. Its language is undoubtedly wide, but actual practice is the test, and public social opinion. Consider, for instance, the plight of coloured people in the United States and South Africa. The same considerations apply to the predominantly Muslim countries in North Africa and western Asia. The social structure rests there upon Islamic civilization.

"The Christian and Muslim faiths are exclusive in their nature. Their adherents believe that there is only one way to the salvation of mankind. Non-believers being in error, the faithful are enjoined to carry the message of Christianity and Islam among them and bring them into the fold. That duty has been well discharged, sometimes with great violence. I suggest that historical religious traditions render the establishment of a genuine secular State in Christian and Muslim countries difficult.

"The ancient Hindu doctrine, on the contrary, commands toleration of all other faiths. A devout Hindu is taught that God is one, though called by many names, and all places of worship are equally sacred, be they temples, mosques, churches, or synagogues. Therefore, for Hindus no question of persecution or of conversion, voluntary or forcible, arises. Again, the relationship between a Hindu and his God is personal. Congregational worship is neither enjoined, nor encouraged, nor practised. Accordingly, religious beliefs have never formed an integral part of the political life of the country. For centuries, so long as India remained free, Hindus, Buddhists, Jains, and other sects lived in harmony and enjoyed equal political rights. India gave shelter to, and welcomed, early Christians and Muslims and Parsis from Iran, who practised their religions and suffered from no disability whatsoever. Here there never has been a State religion so-called.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"It was because the genius of the race so definitely inclines that way, and in the Constituent Assembly members were predominantly Hindus, that a real secular State was so readily established in India. The Indian caste system misleads but, originally based not on birth but on vocation, does not form an essential part of Hinduism. The Indian Constitution expressly abolishes "untouchability" and forbids its practice in any form whatsoever. It provides that all citizens, theists and atheists alike, are equal before the law, entitled to its protection, to freedom of conscience, and to profess, practise, and propagate their religion, and are equally eligible for public appointments. The State is not only religiously neutral, but has paramount authority to make laws governing, for example, the status of women, marriage, divorce, succession to property and other social matters, superseding existing rules, whether based on religious tenets or not. These provisions are in consonance with our ancient doctrine whereby territorial, tribal, and even family custom was a source of enforceable law, and could abrogate or modify rules prescribed by ancient law-givers.

"Finally, prohibition of all discrimination between different citizens in India is not merely lip-service but of actual day-to-day application because of the composition of its population. A visit to any Indian city would, by its many places of worship, show how diversified are its religious and racial elements. I stress again that Hindu doctrine and tradition do not countenance anything but a secular State as understood in the western countries."

The Plight of the Bengali

The plight of the Bengali people after the partition, has very seldom been expressed in so very few and so very poignant words, as by the Governor of West Bengal, Dr. H. C. Mookerjee, on the occasion of his visit to Nagpur. We support every word of his, but would add that the only hope of the Bengali is in the revival of the indomitable spirit of faith and adventure that their forbears displayed in the past.

Presenting an address of welcome on behalf of the Bengali Association, Justice Sen referred to the plight of lakhs of Bengalis ousted from their hearth and home as a result of partition and said they looked to Dr. Mookerjee with hope. Another address was presented on behalf of Mani Mela.

Replying Dr. Mookerjee said, "I am grateful to you for the honour you have done me. I am fully conscious of hardships of the Bengalis, I have had personal experience of these. Like you all here I also am a Bengali. I have seen the plight and privation of those who, bereft of their hearth and home, deprived of their wherewithal, snatched away from their kith and kin, have been constrained to seek shelter in West Bengal.

"I do not quite know what relief I can render to them. For they are so many and our resources are so limited and small that in trying to help all we might be able to help none, so little will come to the share of each.

"The Bengali is completely broken today. His pride and his culture are no more. He is a beggar today. And I am afraid, constant importunity to others will one day give rise to resentment and refusal. I do not know how you Bengalis here are faring, but to me it seems generally speaking that a Bengali today is unwanted everywhere. Our only hope is God.

"I can give you no hope, no encouragement. With the passing of every day our condition is getting worse and worse. All that I can say, is, I will try to do what little I can, but with what results is not for me to say. For to raise any hopes would be a fraud on you.

"I wish I could spend more time with you all, but I am in the hands of others and must rush back for another engagement."

Society and State

According to Indian traditions, society was the supreme expression of human association, and the State was its instrument to realize the purposes which it felt to be necessary, desirable and conducive to the highest ideals of conduct. But modern dispensation has reversed the relation; the instrument has become the master and dictator. This unnatural arrangement is at the root of the evil that plagues us. And it is time to halt and neutralize its effects.

This can only be done by recalling humanity to their true function and purpose in this world. The framers of the Indian constitution have laid it down in clear language. The Social Order, it has been said, approved and aspired to by the people, is based on the following principles:

India shall be a Sovereign Democratic Republic based on—

(I) *Justice*—social, economic and political.
(II) *Liberty*—of thought, expression, belief, faith and worship.
(III) *Equality*—of status and of opportunity.
(IV) *Fraternity*—assuring the dignity of the individual and the unity of the nation.

On the eve of the elections, we should like every candidate and voter, man and woman, to re-dedicate themselves to the service of this eternal quest of the human spirit. That will enable them to raise this process of selecting the best representative to the Legislature above the dust and heat and littleness of controversy.

Unfortunately the majority of people in this country are not only illiterate—and therefore unable to settle for themselves the line of thought and action necessary for their social weal, by means of perusing the written counsels of the wise—but are also so bewildered by the problems that beset them from all quarters, that no hopes for the future can be entertained unless a band of informed and selfless workers be formed into a mission of uplift.

This is Politics

The *New York Times* in its issue of November 12 last gave a heading to the article of its London correspondent, Raymond Daniell—"Arguments are in Reverse"—that shows that in politics, in day-to-day politics at least, there is nothing absolute. The heading is quite justified as the description below will show:

"In the banked longitudinal benches to the right of the Speaker, there now sit Winston Churchill, Anthony Eden and Richard Austen Butler, leaders of the Conservative Government, who for six long years sat on a corresponding bench on the opposite side of the House. That side is occupied now by Clement Attlee, Herbert Morrison and Hugh Gaitskell, leaders of the Opposition.

"So much for the physical change. It is less striking than the metamorphosis that, superficially at least, has overtaken the philosophical and ideological approach to national problems by speakers for Labor and the Conservatives. Both have been busy in the last week taking words out of each other's mouths.

"It was surprising to hear Mr. Butler, a Conservative Chancellor of the Exchequer, pleading the case for more 'austerity' and more controls in almost the same words as Sir Stafford Cripps might have used. It was even more confusing to hear spokesmen from the Labor Opposition using the same arguments against denationalization of steel Mr. Churchill had used earlier against nationalization of this vital industry.

"Yet that was exactly what happened in the first week of this Parliament. Mr. Butler, faced with an economic crisis, resorted to drastic import cuts and imposed new restrictions on credit and currency. He said also that strategic stockpiling would have to be slowed down, prompting some Labor speakers to observe that if any of them had made such a proposal they would have been accused of selling out to Aneurin Bevan.

"Mr. Butler was attacked also by Maurice Edelman, a Labor member, for driving the 'last nail into the coffin of private enterprise' by raising the bank rate (the rate for making money available to financial markets) one-half of 1 per cent. And Mr. Attlee, who so often has been accused by the Conservatives of putting Socialist doctrines before the national interest, arose at one point to assert that the Conservative plan to restore the steel industry to private hands was 'a mere piece of doctrinaire private adventure.'

But the strangest of all was the appeal of Mr. Attlee and Mr. Gaitskell to Prime Minister Churchill to abandon plans to annul the nationalization of steel in the interests of 'national unity,' because it would be 'unpardonable' at this time of crisis 'to create further uncertainty' in an industry so important to defense. These were almost the very words used by Mr. Churchill in his unsuccessful effort to induce Labor to postpone the nationalization act more than a year ago.

"It was a week in which the Conservative speakers went out of their way to express their devotion to the social services and the principles of the welfare state, and in which the Labor speakers sought to prove themselves the housewives' friends by attacking proposed cuts in food imports and advocating a slashing of imports of tobacco, gasoline and wines.

"The Labor Party speakers tauntingly accused the Conservatives of a belated conversion to Socialist principles now that they had the responsibility of governing the country. The Opposition guffawed at Conservative retorts that they did not know until they took office how grave a crisis confronted Britain after six years of socialism.

"In one other respect, party roles have been reversed. In the last Parliament, it was Conservative pressure that kept Labor members in their seats at all sessions and far into the night for fear of snap divisions that might bring the Government down. This time Labor has the power to hold the Conservatives in thrall and seems to mean to use its power.

"In the last Parliament, Conservative moves to amend the King's address, which outlines the Government's program, were attacked by Labor as unprecedentedly contentious. But now Labor has adopted and accepted the precedent."

This reversed roles have emboldened us to entertain the hope that Winston Churchill will prove to be a more accommodating politician to negotiate with. In the case of Ireland he and Lord Birkenh ad took the lead in shaking hands with murder represented by Michael Collins. On this experience Deshabandhu Chittaranjan Das built the theory that the Tories in Britain were more amenable to pressure and were more ready to yield power to under-privileged classes or countries. Trusting to it, he started negotiations with Lord Birkenhead through Lord Lytton, then Governor of Bengal. It was just before his Faridpur speech as President of the Provincial Conference—his last political will so to say. That episode has not been cleared yet. One witness is still with us—Dr. Radhakumud Mukherjee. At that time it was the talk of the town that it was at Miss McLeod's house at Belur Math that Deshabandhu Chittaranjan and Lord Lytton met, that Dr. Mukherjee was the go-between. It is up to him to clear the mystery.

We will look with a certain amount of curiosity to what Winston Churchill does to restore balance to his country's economy. Politics in Britain depends now on the success or failure of his attempt. Ministries may have to come and go.

If the post-election picture is strange, stranger still is that, given by the *Worldover Press* observer, Maurice Cranston, of the mood of the British people on the eve of the elections.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"It has been said that the British people never vote to put a good government into office. They think no government is good—only that some are less evil than others. Certainly in Britain today you will hear little passionate and positive advocacy of either party which is contending for power on October 25th. Uppermost in Labor voters' minds is the thought, 'Keep the Tories out!' Conservatives are dominated by the corresponding imperative, 'Put Labor out!'

"Prime Minister Attlee chose a crucial moment for the poll. This country is on the edge of its worst economic crisis yet. Everyone knows there will be a fuel shortage this winter, since the mines have frankly failed to yield the coal the winter will require. Before the war there were in Britain 2,000,000 unemployed people and several million badly paid people who could not afford coal to heat their homes. Now that these people have work and good pay, they demand coal. But the mines Labor has nationalized have not provided the extra coal to satisfy this new market Labor rule has created. The responsibility is one the Labor Government neither can nor should repudiate.

"But the crisis to which Britain is moving at ever increasing speed is something more serious than a shortage of coal. Her imports are rising and her exports falling, both sharply. In 1950, Britain was exporting goods worth £229,000,000 more than she imported. Despite steadily increasing output, the rise of prices for so many of her essential imports began to cut export gains in proportion to import expenditures. Between January and April of this year the balance was reversed as compared to the good year of 1950, and imports were running at £130,000,000 more than exports. Between May and August that adverse balance rose to £630,000,000.

"There have of course been export gaps before: seriously in 1947 and less seriously in 1949. The 1947 crisis was relieved by Marshall aid; the second by cuts in the social services. Both were also relieved by the general process of recovery from the war. Nothing of the kind can be expected to dull the impact of the coming crisis. The party returned on October 25th must face an economic challenge more searching than any in the history of this country.

"The surprising thing is that neither party has faced these issues at all squarely. The Tories have been rather more frank than the Socialists, but the policy they recommend is, to a degree, nebulous. More production and more work, they say, is the key to the question. And, of course, they are right. But what methods does the Tory party stipulate to achieve more work and more production? First, a return to the profit incentive. They promise to unfreeze profits and unfreeze wages. The prospect of such a program has already given heart to the investing class. and on the day Mr. Attlee announced a general election, stock exchange prices rose by several million pounds."

In passing we may remark that after the election the market crashed to the tune of a £800,000,000 fall in prices!

"The working class takes less kindly to the slogan. 'More work' means an end to restrictive practices in industry. That would increase production. But it would be a very optimistic Tory who hoped that a Tory government could succeed where Labor governments have failed in making trade unionists abandon restrictive practices. *The Economist*, the journal of informed capitalist opinion, has long recommended a small measure of unemployment as a means of keeping the working class productive. But no Tory candidate, to this correspondent's knowledge, has dared to put this policy to the electorate.

"The positive side of Tory addresses to the public have been remarkably similar to those of Labor. The ends which are envisaged—rearmament, social welfare, a foreign policy tied to U.S. and Commonwealth development—are shared by Tories and Socialists, strange as that unanimity would have seemed 30 or even 10 years ago. It is one of the ironies of the present situation that both the leading British parties should be agreed on fundamental lines of progress at a time when there is slight chance of much progress being made.

"The British public is in large measure being offered a change of man rather than a change of principle. The Tories say they will be 'empirical' where Labor has been 'doctrinaire.' This may well be a wise way of arguing. However, the Tories will probably catch more votes by complaining about the sharp rise in the cost of living, although the rise here has been markedly less severe than in free-enterprise countries like France.

"Furthermore, there is at the back of many voters' minds the belief that the United States will deal more generously with a Tory than with a Labor government. Rightly or wrongly, the British suspect that the closer a European government approximates that of Western Germany or France, the more money Americans will invest in it."

—

Anglo-Egyptian Tension

Egypt has been waging a two-front war—one against continuance of British control over the Suez Canal area, and the other against the same control over the Sudan. This she has been doing in the name of—"Unity of the Nile"—the area watered and enriched by the gift of the river Nile.

The story of Anglo-Egyptian "con-dominion" has been often told in these pages. The year 1899 which saw the defeat of the Mahdi, the prophet among the Sudanese, brought about this dual rule arrangement. But these 50 years have made many changes in the minds and aspirations of the people of the Sudan. And Britain has been trying to accommodate her policies

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

to these. An appreciation of these are given below in order to enable our readers to rightly understand the facts behind front-pages news.

"In 1948, the British Governor-General promulgated an ordinance, setting up a Legislative Assembly and an Executive Council in the Sudan. In spite of Egypt's protest the plans to hold elections to the Assembly were proceeded with. Quite a noise was created at the election. The parties favouring union with Egypt, in large or small measure, formed a United Front and boycotted the elections. Anti-election demonstrations were held which were dispersed by the police. In some instances, the poilce opened fire to disperse mobs. Parties, which favoured independence for the Sudan, contested the elections.

"Those favouring union with Egypt are not of one mind. While Wad el Nil (Nile Valley) demands complete fusion with Egypt Ashigga (Brotherhood) wants self-government under Egyptian sovereignty. Ittihadian Party (Unionist) stands for Dominion status under Egyptian Crown with the right to secede. Ahrar Ittihadian (Liberal Unionists) want eventual independence through a preliminary stage under Egyptian Crown. Nor are the champions of the independence of one mind. The Umma (People's Party) wants independence now and here, the question of republican or monarchical constitution to be decided by subsequent plebiscite, while others ask for independence on republican basis. Some want independence after a transitional period under international trusteeship. However soon after the new Assembly met, it adopted by 39 votes to 18 a motion, sponsored by Umma party, asking the Governor-General to approach the Condominium Powers for a declaration, granting self-government to the Sudan before the end of 1951. Egypt at once declared that she would not be influenced by the vote of the Assembly. 'The electorate by which the Assembly was elected represented only one quarter of one per cent of population.' Egypt did not refuse self-government, but it should be on the basis of unity of Egypt and the Sudan.

"The Nile is the life stream of Egypt. The control of the Upper Nile is a question of paramount importance to Egypt. But Egypt cannot refuse to take note of the growing movement for independence in the Sudan. It might have been fostered by interested parties. That does not alter the fact that it exists."

The latest reports (November 24) from Khartoum, the Sudan's capital, are not re-assuring to Egypt and her supporters in the Sudan. The *Times* correspondent in that city anticipates the "likely" split in the "Struggle Front"—that ill-assorted groups which were trying to offer a united front to Britain and her pretensions. This "Struggle Front" is made up of the Ashigga and other minority pro-Egyptian factions. And the leader of the former, Mr. Dardini Ahmed Ismail, president of the small "Unity of the Nile" party, has retired from politics, declaring that "the pro-Unity party is not led by honest people." He is said to be respected by all parties, and his retirement is apprehended to be the end of the "Struggle Front." As we write these lines (November 27), there is no hopeful news from the Sudan.

The Communists of the "People's Democracies" label have been fishing in these troubled waters. Egypt's claim for undisputed rule over the Sudan does not constitute "shackles of enslavement" in China Communist eyes. And the real villain of the peace is not Britain but the United States.

This is the line of propaganda that the Soviet ruling class have made fashionable. Their fellow-travellers in other countries have accepted it, and propagate it with all their might. Even Indians are found in this company illustrating once again that Europe has yet an appeal to many of us. As the English-educated class amongst us used to ape Europe's fashion, so do these people do today. Political freedom has not freed them from the "shackles" of a new imperialism.

North Atlantic Pact Signatories

These 12 States, big and small—Great Britain, France, Canada, Belgium, the Netherlands, Luxembourg, Denmark, Norway, Italy, Iceland, Portugal and the United States, have been organizing themselves to halt a Soviet Union attack on their democratic habits all in the name of peace. The latter also have been making great noise about their peaceful intentions. Their Peace Conferences have become a regular feature in newspapers of the world. We have thus got used to these war-and-peace cries.

There has developed a certain competition between these group of Powers. The Atlantic group have been trying to recruit to their ranks Spain, the last relic of "Fascist" attempt to rule a civilized people, we are told. The United States, as their leader, have been nursing this idea, and General Franco is reported to be putting up his price. The matter is being discussed in the press, but owing to the prejudices of democratic opinion in the Western world, it has not come before the U.N.O.

Meanwhile, a Mediterranean Pact is in the offing with Turkey and the Arab States as partners. The Soviet Union has warned Turkey that should she choose to join it, an unfriendly act will be committed against her. But for all practical purposes there is already an understanding by which Turkey has been receiving financial aid and military equipment in order to enable her to stand up to Russia. The age-long Russo-Turkish feud is being whipped up. Strange things happen in politics, the ally of today is the enemy of tomorrow and *vice-versa*. So, the world jogs on in spite of wars and revolutions.

Asian Solidarity

On 29th October last Burma's Prime Minister, Thakin Nu, told a Press Conference at Calcutta that he had discussed with the Indian Prime Minister in New Delhi various matters, including steps Burma and India should take with regard to Japan. Both India and Burma, who did not participate in the San Francisco Conference on Japanese Peace Treaty, were now awaiting the ratification of the draft treaty by the Governments of the countries concerned.

On the internal situation in Burma what he told us was reassuring. The general elections in the third batch of districts would be held on November 16 and the last instalment of elections was due to take place in December. According to the present schedule, the new Burmese Parliament would come into being by January 4 next year. He said that the process of coming into being of a separate Karen State was on and as soon as Karen insurrection in some parts adjoining the Karen majority district had been controlled, the inauguration of the new State would be formally done. For the present, Parliament members from the Karen areas had formed a Council for Karen affairs and elected from amongst them one as a Minister for Karen Affairs, who would automatically become the first head of the newly created State after its inauguration.

Nowhere in Burma were Communists or any other brand of rebels so strong as to face the Government forces. But as they conducted their sabotage operation from difficult hide-outs, it required sufficient troops to completely weed them out.

Burma had two five-year plans. By executing the first, the Government would 'liquidate finally' the insurrectionary forces in the country, and the other visualised nationalisation of all lands with payment of compensation.

On devleopments in Asia, the Burman Prime Minister appears to have ideas that are almost identical with India's. Speaking on Asian politics as a whole, the Burmese Prime Minister said there were some people who 'were out to cause disruption in Asia.' He did not specify who those people were but added, 'they are some individuals.'

Some countries in the East were yet to be completely free, and unless all the Asian countries were free, solidarity of Asia would not be possible. Indo-China's case is an instance of the determination of a European power—France—to continue its old practice of exploitation. Thakin Nu also informed the world that the three Prime Ministers of India, Burma and Indonesia would be meeting soon to decide their course of action.

Leaders of India's thought and life—Rabindranath Tagore, Gandhiji, Srinivasa Iyengar, C. R. Das—had spoken on Asian solidarity. It was left to Netaji to show how it could be practically done. That responsibility has fallen on men like Thakin Nu. But the greatest stumbling block to it is the separatist conceit and ambition of the Islamic world. But as a first step we would be satisfied with South-East Asia's solidarity. That is possible almost immediately if the Masjumi Party of Indonesia is controlled, and the U.S.A. does not use the Philippines to twist the idea. These two "ifs" contain the future.

Inter-Racial Relations

The prejudice of white-coloured people, or "colourless" people as Mrs. Besant used to call them, has become a subject of controversy even in the 62-nations U.N.O. Its General Assembly has been sitting at Paris for its sixth annual session, and India has lost no time in bringing her charge-sheet again against Dr. Daniel Malan's realm. The South African Premier is of Dutch parentage, and is generally known in that country as one of the Boer leaders, whose colour-conceit is of the fiercest. But under their skin the Briton is as much infected by it as his Boer neighbour. This in a nutshell is the problem in South Africa, nay all over Africa. For, the Boer-prejudice has spread, and threatens to engulf the whole continent where the whites hold political sway.

In view of the catastrophic nature of this issue, involving her children, India has been obliged to challenge this outrage on the ethical basis of human relations. She gave South Africa a Mohandas Karamchand Gandhi who for about 20 years fought for the self-respect of coloured peoples, as also of his own people resident there. They are a tiny minority of about 300,000 while the whites are 3,000,000, and the Bantus, the natives of the country are about 70 lakhs.

And since the foundation of the United Nations Organization, India, an original member, has been persistent in attempts to right this wrong. But the Anglo-Saxon Powers—U.S.A., Britain, Australia, New Zealand—have been observing some sort of neutrality which is fraught with danger to all concerned, whites and non-whites alike. This has been brought out in a pamphlet issued by the Institute of Race Relations of South Africa. The quotation below gives the argument in its reality; it also shows that thinkers even in South Africa are striving their best to rid their body politic of this poison. It has been quoted in the *Indian Opinion* as the front-page feature. The weekly was founded by Gandhiji nearly 50 years back and is now edited by his son Shri Manilal Gandhi:

> "In spite of the numerous recommendations made by interested organisations and skilled observers over the past fifteen years in particular, South Africa has largely turned a deaf ear to the warnings that unless some provision were made for the training and ultimate absorption of the rising generations of Non-Europeans as useful citizens into the community, such potential citizens would become

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

a burden, if not a menace, to the society which rejected them.

"Regardless of whether one considers that such Non-Europeans should be integrated into the South African society of today, or whether they should be isolated into their own society, the problem is left untouched; for, in either event they cannot become useful citizens unless they have been given the aims and aspirations of such and the necessary training and guidance to harness their tremendous potential to a useful purpose.

"More spectacular problems, like those of the recent war, have been allowed to eclipse the urgent need of providing for the training of this vast group of people, so that today South Africa is faced with the alarming problem of dealing with thousands of Non-Europeans who, because they have been unable to see any prospects of bettering themselves socially or economically, have turned in sheer hopelessness to the idle and lawless alternatives left to him.

"Threatened by the monster they have created, the European citizens of the larger South African centres have, seemingly, still no conscience regarding their deed, and it would appear no real appreciation of the magnitude of the problem that their thoughtlessness (if not deliberate neglect) has brought about. They demand that lawless Non-European youth be removed from the Townships and placed somewhere out of the way. No one is particularly concerned as to just where it should be placed, but all are agreed that it should be removed. However convenient such a measure might at first prove, it is obvious that the problem as such would be left untouched. What provision has been made for the mounting stream of children growing daily nearer to adolescence? When they are youths will they have been offered any hope of a self-respecting, useful life within a community which values them as fellow-citizens?

"Whatever measures are taken to deal with the present ugly situation, and it is to be hoped that this will not be required to deteriorate before some measures are taken, South Africa must ensure that no stone is left unturned to transform this vital, useful energy into a national asset. More attractive avenues of employment must be thrown open to the Non-European as an incentive of greater educational qualification and higher degrees of trained skill, and every effort to settle this large section of the community as a happy, healthy and useful body must immediately be taken.

"No monies, time or trouble spent on such a campaign, could be considered too great, for, if we do not destroy this monster and remove its cause, it will undoubtedly destroy us."—*Press Statement by South African Institute of Race Relations.*

Soviet's Economic Reports

Soviet newspapers and commentaries reaching us tell us of the stupendous advance in the condition of the people from Russia to Mongolia—all under the inspiration of the "great Stalin." It has become the habit of Soviet writers to credit the Soviet dictatorship with super-human powers. It is this spirit to which R. D. Cole refers when he called Communism a sort of religion, minus belief in an after-death life and in heaven.

But there are people who question this habit and challenge the very basis of Soviet progress reports. One of them, Harry Schwartz, professor of Economics, Syracuse University (U.S.A.) in his book, *Russia's Social Economy,* gives a quick survey of its marked features from the October revolution to the 4th Five-Year Plan (1950) with State Socialism and its other derivatives. This book is reviewed in the September (1951) of the *Political Science Quarterly* of the Columbia University, and we are enabled to give our readers a summary of his doubts about the statistics flaunted before the world. The confusion created in our mind by these appears to be shared by others. The following lines are relevant to the subject:

> "On the deficiencies of Russian statistics, a perennial source of frustration to all students of the Soviet economy, Schwartz has a full summary of the present state of the debate, to which he himself has been a frequent contributor. He agrees with most other Western observers that Soviet statistics are not purposely falsified; the rapid development of the Soviet economy after 1926-27—the year the prices of which are taken as constant weights in measuring production—is the basic technical factor exaggerating the growth of physical volume of production. After 1930, the U.S.S.R. was producing many products never before made in the country as well as improved versions of goods already made in 1926-27. These new goods, valued at later prices, received a much higher weight in the measuring of industrial production than if 1926-27 prices had been used. Thus an upward bias is imparted to the official index. An additional tendency toward exaggeration exists in the case of consumer goods because of inadequate measurement of small-scale private production in the late 1920's. Thus the increase in consumer goods' production in official statistics for the 1930s reflected mainly the growth of output of large state enterprises, while neglecting to take account of the counter-balancing decline in consumer goods' production caused by the extinction of small producers."

To show that the human element is as frail in the Soviet territories as elsewhere, the following extract from the *Worldover Press* is given below:

"As a social phenomenon rather than a cause for finger-pointing, it is instructive to note that the Soviet Union, as well as the United States, has been having its troubles with crooks and corruption in high places. According to the *Leningradskaya Pravda,* one Zvyagin, Director of Store No. 6, Kalinin, embezzled over 3,000 rubles. He was allowed to make restitution, then discharged with a warm recommendation as a "faultless worker." In a new post on the strength of this character reference, Zvyagin promptly embezzled again. The Leningrad paper recounts case after case of falsified book-keeping entries, outright theft by officials, and in one warehouse the stealing of goods valued at 200,000 rubles. Similar cases of gross corruption have been reported from many parts of the U.S.S.R., for example, by the *Kazakhstanskaya Pravda,* the *Sovietskoie Gosudarstvo I Pravo,* etc. In

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

one of the best-advertized consumers' unions, at South Kazakhstan, concealed shortages, embezzlements, unlawful spending of funds, and other offenses, brought losses amounting to 1,423,800 rubles."

"Santiniketan Revisited"

Under this caption is published a small article in the November 17 number of the *Vigil*—Delhi Weekly—giving the "reactions" of some of the Ashrama inmates to "the recent evolution of the Ashrama into a Government-sponsored seat of learning." The writer, evidently an old student, reports developments which, to say the least, are depressing, to people who are admirers of the poet's experiment in the making of men and women in India. Pioneers such as India's "Sentinel" have invariably experienced the drowsiness of their companions in the watch for the integrity of the soul, and Rabindranath could not expect to escape it. But we still like to believe that the men and women on whom has devolved the duty, shouldered by the poet almost alone during his lifetime, are awake to the sacredness of the trust left by him.

We will allow the writer to describe in his own way the states of mind prevalent in Santiniketan.

> ". . . all of them were symbolised in the new barriers and barricades which have been put up around open spaces,—those lungs with which in days of yore you breathed in the Eternal in space and in spirit.
>
> Tagore, observed one of the old residents, proceeded, while building up the institution, from the village to the universe. Now the city has been made the starting-point and the prayer of the administrative staff appears to be, 'O Lord God, let a city of Gold arise on this erstwhile old Jerusalem, the paradise of a poet's dreams of the divinity of humanity turned into golden vision and golden wheat, silvery song and self-sacrificing, nay, Self-realizing service.'
>
> Said another of the inmates, young in age but with his roots in the teachings and traditions established by the Poet, "The Poet has sung of the distant being brought near. Today, alas! the near has been made the distant. To go to your fellow-inmate you have to take a round-about path, for the barriers have made it impossible for you to go direct to him. Further, during working hours you cannot approach Authority as one human being approaching another human being, as you did before, but through a mediator, be that mediator inanimate like the red-tape or animate like the P. A. to the Boss. Look at the multiplicity of offices and equipments and appointments."
>
> "The human touch," remarked a third, grown grey in the service of the Poet's ideals and activities, "has disappeared altogether. Three to four decades ago the Poet described the then prevailing system of education in the country as if it were a tin of a popular brand of condensed and 'congealed' milk, untouched by the human hand, and in protest he created Santiniketan. But now even here they meet one another like the characters in the Poet's play, 'Kingdom of Cards'!"
>
> "The field has been turned into a factory," declared a fourth. "For, standardization has taken the place of spontaneity, and commercialization, of consecration."
>
> A fifth summed up the change that has come over the institution in recent months thus, Block, lock, and flock!" What he implied was that more blocks of big buildings dot the green more locks are put on policies and programmes, and the flock of sheep is increasing so fast in size that it is becoming wellnigh unmanageable.
>
> Was the omission from the Act of the words, "Shantam, Shivam, Advaitam" anticipatory of the shape of things to come? For today, wherever going round the institution one has to make a special effort to contact the spirit of Quiet, the spirit of Concord and the spirit of Cohesiveness which once constituted the glory and greatness that was Santiniketan,—a Home and Heaven of the spirit."

The writer has thus expressed his disillusionment in the last paragraph. We share his feelings with regard to the omission from the Act the words "Shantam, Shivam, Advaitam" enshrined in the life of the Ashram by the Maharshi. In the columns of this journal we have more than once condemned this vandalism. But to our sorrow neither "Visitor," the Rashtrapati by the right of his exalted office, nor the Chancellor, Shree Jawaharlal Nehru, appears to appreciate the enormity of this act of State, sanctioned by the Central Legislature by votes of the majority. This one act has pricked the bubble of democracy—respect for the feelings of millions of human beings—to us. Will it be made an election issue in the district of Birbhum at least?

These are fears that many of us share. And it is impossible to think of a bright future. This the conductors of *Science and Culture*, India's foremost science journal, do in their November number just to hand. Their suggestions are worth trial.

"The future of the Visva-Bharati: It appears to us that it will be difficult to fit in the following Santiniketan Institutions in the general scheme of a university. These are:

(*i*) The Rabindra Bhavan, which will be the national collection of all materials concerning the Poet's life and activities. (*ii*) The Sangit Bhavan, whose chief responsibility will be to preserve the correct tradition of rendering the Poet's songs, festival of the seasons, plays and dance dramas. The devising of improved musical notations, for more precise transcription of the Poet's musical compositions, will also be its responsibility. The role of the Sangit Bhavan will thus be in many respects similar to what Wagner intended Bayreuth to be, the repositor of his music dramas. (*iii*) Kalabhavan's future will depend largely on the personality and capacity of the Director selected to succeed the great artist Nandalal Bose. Creative artistic activity does not ordinarily form part of university work. (*iv*) Regarding the Santiniketan School it is desirable that the school campus should be separated completely from that of the University,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

and it should be placed in charge of a committee who are conversant with Rabindranath's educational writings including the Poet's School, and have understanding and sympathy for his ideas.

"The rest of the Institutions at Santiniketan and Sriniketan can be incorporated in a university with two main groups of activities:

(*a*) Consisting of the well-developed post-graduate departments of art, specializing in research and study of the religions, literature, history, philology and languages of the main cultural groups in India, and of Asia. When funds permit and suitable trained men become available, a department of comparative study of Western culture and religion can be opened, centered round the Dinabandhu Bhavan.

(*b*) The rest of the college departments of Santiniketan, suitably expanded for the purpose, together with as many departments of the Institution for Rural Reconstruction at Sriniketan, as can be fitted into the scheme, can form a splendid nucleus of a Regional University; we use this expression in preference to the term 'rural university' coined by the last University Commission. This regional university will be able to provide training in, as well undertake investigations pertaining to problems of agriculture, soil conservation, aflorestation, rural economics and industry, health and village rehabilitation problems, affecting part of Burdwan, Birbhum, Bankura and Midnapore districts, all of which possess similar ecological characters. It should be the responsibility of the Government of West Bengal to support the regional university financially, as well as by maintaining under joint management with the University departments, experiment stations for agriculture, soil conservation, afforestation nurseries and health organisations. Such collaboration has become the practice in the U.S.A. with very satisfactory results. It is time that a trial should be given of this procedure in this country."

History of India's Railways

The re-grouping of India's Railways centred at Bombay, has given an occasion to the Press to refer to their start and growth. We summarize from the *Sunday Times* (Madras Weekly) what a correspondent writes on the subject specially with reference to South India:

"As a purely experimental measure the construction of three lines: (1) from Calcutta to Raniganj; (2) from Bombay to Kalyan and (3) from Madras to Arakonam was sanctioned in 1845. As there was no capital in India and British capital being unwilling to embark upon such enterprises the East India Company had to accomplish these early constructions by guaranteeing a fixed rate of interest on the capital invested by the British Companies. It was on the recommendadtion of Lord Dalhousie that the construction of trunk lines was taken up by the Government, and it was Lord Dalhousie that drafted the first plans and sketched the routes for the main trunk lines. But in this plan the attention was not directed to connecting contiguous trade points, and to exploring thoroughly the trade of each district and each region through which the railway passed by a systematic construction of feeder lines. Instead, the scheme followed was to construct grand trunk lines traversing the length and breadth of the country and connecting the big cities of the interior with the big ports of Calcutta, Bombay and Madras. By 1875 most of the big cities were so connected by grand trunk lines constructed by British-guaranteed Companies who were sure of five per cent interest on their investment. Protection against famine was one of the main reasons for the railway extension in India. The Famine Commission of 1880 found that greatest mortality due to famine was found in those tracts in which transport facilities were worst. In 1884, the Railway Committee reported that the railway extension should be pushed on vigorously in India for the development of internal trade and also for the economic improvement of the people. The development of railways produced the most important effect of levelling up of prices of food-grains and also of being instrumental in helping the growth of Indian industries especially coal and cotton, not to speak of many others.

"From the early years of the present century the Government embarked upon a programme of more intensive railway development with the result that between 1900 and 1914 nearly 10,000 miles of new lines were opened up. Some idea of progress of railway construction in India may be had from the following figures: Between 1844 and 1870 only 4,255 miles of railway lines were opened to traffic, and during the next ten years another 4,239 miles were added thus bringing the total to 8,494 miles in 1880. Between 1880 and 1900 which was the period of the new Guarantee system 16,258 miles were opened up while during the next 14 years 9,904 were added, thus bringing the total to 34,656 in 1914. In 1932-33, there were 42,950 miles of railway lines opened to traffic. After this period attention was directed to the construction of interior lines with the double object of opening up of new lines and developing of traffic on main lines. Shree N. Gopalaswami Ayengar has pointed out in his Railway Budget speech (1951) that all railway expansion is starved and there is great need to open up the unopened country to the other parts of the country by laying fresh railway communications. Great and extensive areas still remain untouched by railways.

"The whole history of railway expansion in India bears testimony to the two indisputable and irrefutable facts: (1) that the railways have not merely become self-supporting but are yielding good returns; (2) that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

the railways have led to the great development of the country in every way. Hand in hand with the development of irrigation, there must go on expansion and development of railway communications also. Calculations whether the new lines will be paying or not need not frighten the authorities in view of the successful and profitable results obtained in the development of railways in India. There is a great need for railway expansion and it is the duty of the State to see that every 'habitable part' is brought within the easy reach of a railway line.

"So far as Rayalaseema is concerned many new railway routes have been recommended by both the former 'Ceded Districts Development Board' and the present 'Rayalaseema Development Board.' Plans for constructing the following routes which pass through Rayalaseema and the Mysore State have been submitted to the authorities, both Central and of concerned States. Mr. K. Hanumanthiah, President of the Mysore State Congress and also a member of the All-Railway Finance Committee, has promised that he would get these lines investigated; the presidents of Hassan and South Canara District Boards have agreed to put forward these lines for consideration before the members of the Central Government. The following are the new lines proposed:

(1) The Central Broad Gauge Railway route connecting north and south branching off at Guntakal and passing *via* Uravakonda, Kalayanadrug, Sira (Tumkur District), Chikkanayanahalli, Tiptur, Hassan and Mangalore.

(2) Converting the Metre Gauge from Hassan to Mysore and the proposed Sathyamangalam line into Broad Gauge.

(3) Metre Gauge connecting Kalyanadrug with Tumkur.

(4) Metre Gauge connecting Devanageri (Mysore State) with Hindupur, Lepakshi, Bagepalli, Madanapalli, Chittoor and Madras.

When these lines have been constructed, there will, no doubt, be a network of transport. But how they will affect irrigation and navigation throughout this vast country-side has to be considered, and that can only be done by a Central organization who are not moved by regional considerations or enthusiasms. The past has taught how the railways affected adversely the sanitation and health of the country, and the food productive capacity of India. In Montagomery Matin's annals it was told that the Tanjore area was the second biggest rice-producing region, the first being Burdwan. What they are today we know. Burdwan is malaria-stricken and flood-infested. Is Tanjore any the better?

World Health Organization and South-East Asia

The fourth session of this organization's South-East Asia Regional Committee closed its sittings during the last week of September last. Dr. Svasti Daengsvang, chief delegate of Thailand (Siam), had presided over the session, and Dr. Antonio Luis De-Sousa Sobrinho, Director-General of Portuguese India acted as Vice-Chairman. Dr. Nani was the Regional Director. Delegates from different countries in South-East Asia attended, their names being:

Afghanistan: Dr. Ghulam Haider Maher.

Burma: The Hon'ble U Khin Maung Lat, Minister for Social Services; Mrs. Aung San (Daw Khin Kyi), Director of Women and Children's Welfare; Dr. Maung Gale, Director of Medical and Health Services.

Ceylon: H. E. Mr. D. S. De Fonseka, Minister for Ceylon in Burma; Mr. A. J. Joseph, Assistant Secretary, Ministry of Health and Local Government; Dr. W. A. Karunaratna, Medical Officer of Health.

India: Lt.-Col. C. K. Lakshmanan, Director, All-India Institute of Hygiene and Public Health, Calcutta; Dr. C. V. Ramchandani, Assistant Director-General of Health.

Indonesia: Dr. M. Soerono, Secretary-General, Ministry of Health; Dr. R. H. Mamoen, Medical Officer.

Thailand: Dr. Svasti Daengsvang, Deputy Director-General of Public Health; Dr. Sombun Phong Aksara, Medical Officer.

French India: Dr. Lacour, Chief of Health and Prophylaxis Services, Pondicherry.

Portuguese India: Dr. Antonio Luis de Sousa Sobrinho, Director-General of Health Services; Dr. Pachoco de Figuiredo, Director of Medical College, Goa.

The Director deplored the insufficient funds of his Regional Committee to allow provision of quantities of equipment and supplies while under the Technical Assistance-assisted programmes equipment and supplies were limited to 25 per cent of the total costs.

The Committee in a resolution requested the Regional Director to draw the attention of the Director-General of WHO to the Committee's strong views on this question.

The endorsed regional programmes budgets for 1952 and 1953 provide the continuation of the present projects and launching of new ones in the control of malaria, tuberculosis, yaws, venereal disease, typhus and the promotion of maternal and child health services. The programmes agreed to include also assistance for strengthening educational and training institutions; provision of medical and teaching missions and refresher courses in paediatrics; launching of mass BCG campaigns; expert consultants on public health, leprosy, nutrition, dietetics, health education, population control; provision for health demonstration areas and rural health units; assistance for promoting local production of DDT, antibiotics and other essential supplies; establishment of thoracic surgery centres and assistance in plague research.

The other subjects discussed by the Committee were long-term planning of regional requirements—

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Fellowship Programme—Improvement of Dental Hygiene—control of trachoma and population problem.

There were Sectional Meetings in addition. Burma's Minister of Social Service, Mr. U Khin Maung Latt, inaugurated the Tuberculosis Conference. The Director emphasized the point that it was essential that Asia should find means to reduce the vast pool of infection. BCG vaccination did not provide the whole answer but could play an important part.

This Conference was initiated by the United Nations Children's Fund whose Regional Director, Mr. S. N. Keeny, described the purpose of the Conference. Their interest in financing the Conference was owing to the special importance of BCG vaccination in protecting children. He hoped that as a result of pooling knowledge and experience the Conference might develop methods suitable to Asian conditions for conducting campaigns cheaply enough to reach all those needing BCG vaccination. Mr. Keeny stated that UNICEF was prepared to provide supplies, equipment and top international personnel so long as its resources lasted.

Some evidence that BCG vaccination may protect against leprosy as well as against tuberculosis was placed before the Conference by Dr. Dharmendra of the Leprosy Section of the Calcutta School of Tropical Medicine. Dr. Dharmendra is at present carrying out a survey for WHO of the leprosy situation in Burma. Scientists had long recognised tuberculosis and leprosy as sister diseases, stated Dr. Dharmendra; he gave a brief account of recent research which seemed, moreover to suggest that persons who had gained immunity to tuberculosis through BCG vaccination might at the same time gain immunity to leprosy. He emphasised, however, that much more research would be needed before definite conclusions could be drawn.

The experts unanimously agreed that BCG vaccination was harmless and was to be recommended as a means of fighting tuberculosis, especially among young people, in Asian countries where there was a high rate of infection and where it was out of the question to introduce on a sufficiently large scale the costly anti-tuberculosis measures which had been successful in Western countries.

Among the more important of the Conference's recommendations were that proper supervision to ensure the maintenance of a consistently good technique of testing and vaccination was essential, as was the systematic re-testing of a proportion of the persons vaccinated in order to check the results achieved.

How History is Written!

The following interpreation of events during the "Swadeshi" era appears in a volume—*History of India*—written by two Ph.D.'s; which students of the Calcutta University have to read and accept as truth. The book was published in 1944:

> "An extremist party developed within the Congress under the leadership of Bal Gangadhar Tilak, a great son of Maharashtra, who found able assistants in Lala Lajpat Rai and Bipin Chandra Pal. The Partition of Bengal strengthened the hands of this party, and in the Surat Congress of 1907 there was an open breach between the moderate and extremist sections. Simultaneously a terrorist movement was organised in Bengal. Lord Minto took repressive measures, some prominent leaders were deported without trial . . ."

In these few lines has been summarized a whole chapter of half-truths. The terms "extremist" and "moderates" were coined by Anglo-Indian journalists, and no Indian should use it in the serious discussion which a history is supposed to contain. The birth of the "terrorist movement" ante-dated the partition of Bengal by Lord Curzon, and from a historian's point of view Maharashtra should be given the place of honour in pioneering it, for in 1897 Damodar Chapekar shot to death Rand and Ayst. About repressive measures these two historians have jumbled the dates. The "Fuller" regime in East Bengal, the organized dishonour of Hindu women caused a reaction, so also the forcible dispersal of the Barisal Conference which caused Hindus to use the bomb and revolver to terrorise the British bureaucracy and their agents—the followers of Nawab Salimullah of Dacca. Then did Lord Minto put his "lawless laws" into motion. This narration and chronology is given in order to show that cause and effect are not as represented in that piece of writing.

"Widows" of Partition

Sometime ago a Meerut news told us that a question has been raised by the case of certain Muslim women whom the press christened as "widows of Partition." The question was,

> "Can those Muslim women who refused to accompany their husbands to Pakistan apply for dissolution of marriage?"

This problem has baffled lawyers here. It is reported that in a number of cases, Muslim parents refused to send away their daughters with their husbands to Pakistan. What will be the fate of such women now? Muslim law provides for many eventualities in which a woman can apply for divorce. The Muslim law-makers, however, could not foresee the formation of Pakistan and eventually they set no provision for the dissolution of marriage on these grounds.

So far as we know the privilege of divorcing belongs in the main to the male Muslim. In the present case, the male is in Pakistan, the female is in the Indian Union. So the Muslim parents in India have taken the law into their hands and are determined to keep their daughters out of Pakistan's reach. And the lawyers are confounded.

Shree Chakravarty Rajagopalachari

In our comments on Bengal's Governors since August 15, 1947 we referred to the way in which "C.R." as the South Indian politician is lovingly called by his friends, succeeded in re-gaining the esteem of Bengalees by the sheer appeal of his intellect and freshness. The London *Economist* writing on his retirement writes with admiration of this "shrewdly independent thinker, a realist and a moderate—attributes all too rare in revolutionary ranks." "Almost inevitably, a leader in such a struggle is apt to become embittered and to brand all who are not with him as against him. Yet, while he yields to none in patriotic ardour and determination, the clarity of Shree Rajagopalachari's thought has never been clouded by his feelings, and no crisis has ever stung him out of the gentle persistence characteristic of his speeches and writings."

The writer appears to deplore that "C.R." was not elected first President of the Republic of India, and he has contrasted with him Babu Rajendra Prasad who is noted for his wise good humour, his tolerance and his chairman's skill in evolving agreement; while another greatly respected moderate of broad views and conciliatory disposition, Khwaja Nazimuddin, is Governor-General across the border in Pakistan.

We have a certain feeling, however, that "C.R." would have done equally well, if not better, in the present Indo-Pakistan relation. His realism would have made concessions that we would not have liked.

We wish him peace of mind and rest, and expect that out of these would come out interpretations of India's culture on which he can speak and write with understanding and penetration. May God grant him peace and a long life!

Women's Co-operative Industrial Home

This institution owed its birth to the pioneer spirit of Lady Abala Bose, wife of Acharya Jagadish Chandra. We do not know that there is any other institution in India that can claim to sell goods made by women, sold by women in shops mainly conducted by them. This story has to be retold today when Lady Bose is not long with us and amongst us. When the institution was started in 1935-36, its necessity was felt as a result of experience gained by the work of the Nari Siksha Samiti (1919) with its subordinate institutions—Vidyasagar Bani Bhawan (1922) and the Mahila Shilpa Bhawan (1926). Both these combined the rudiments of general education imparted through Bengali with an intensive course of education in home industries. The original fund of Rs. 6,000 was supplied by the Central Government. Subsequent help has come from the same Government with Bengal—West Bengal as the legal intermediary. This help has been rendered inevitable by the "refugee" problem. Under this head come about Rs. 10,000; the West Bengal Co-operative Ministry supplied Rs. 13,000; and the same Government made a lump grant of Rs. 1,500, and has for about eight years been paying Rs. 225 every month as help to a women's industrial school.

But more can be done. We have been shown how in their attempts to co-operate with the "Grow More Food" campaign, their vegetable garden has been fully financing its expenses now. The Food Minister has visited the Home, now centred at Kamarhati, on lands where there had been military structures measuring about six acres with extensive *jheels* (lakes) and tanks, an ideal place for a colony of women who have been forced to earn their living while learning certain suitable industries and crafts. Promises of help have been made, but these have yet to take shape. With regard to the basic industry of weaving, it is being literally kept starved. The Supply Minister, Shree Nikunja Bihari Maity, has presided over the Home's meetings, made promises that have failed to materialise. The monthly requirements of the looms are about 1,200 pounds of yarn, while they get only 300 pounds.

This difficulty has been created by the Central Government's yarn distribution policy, and the Central Minister, Shree Harekrushna Mahatab can remove it. We draw his attention to this matter. The same difficulty is met in the supply of dyes for colouring yarn and for printing the finished products. The supply of lower count yarn has forced on the Home the necessity of specializing in the weaving of bed-sheets, of door and window curtain as also of rough towels. Shree Nikunja Bihari Maity is an unwilling partner to creating this handicap in an industry which is as much to his interest to advance as of the women who are co-operatively organized for an experiment in associated work.

The long-term plans elaborated by the Secretary are the usual things—poultry-farming, fishery, bee-keeping, electrically-driven tractor. Most of these have proved successful in the Bani Bhawan branch at Jhargram (Midnapore). On the last, we have the best authority to say that a tractor will sit idle for more than 9 months in the year. Six acres are no job for it. When these acres have been put to the utmost and best use, the enlargement of the colony will be a proposition that can be seriously discussed. This enlargement raises questions. For, there are other claimants to be considered. And a women's colony should be satisfied with its 6 acres.

Tribal Welfare in Madhya Pradesh

The three merged districts of Madhya Pradesh cover an area of 30,000 square miles and have a population of 25 lakhs, or about 85 persons per square mile. Most of the people are scheduled as aboriginals and their backwardness is a challenge to our conscience. The common features are: lack of communications,

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

extreme poverty, chronic drunkenness, high incidence of VD and yaws, and a tribal system of internal government. On certain days in the week, whole groups of villages, including even children, get intoxicated out of their senses. Nudity is common in several parts and many people subsist on a diet of roots and raw meat.

The development of this region, comprised in the three districts of Raigarh, Surguja and Bastar, has now become the concern of the Madhya Pradesh Government. In spite of their potential forest and mineral resources, these districts are at present completely unproductive; and although the Madhya Pradesh Government gets a subvention of Rs. 45 lakhs from the Union Government, it is incurring a revenue loss on them.

Nevertheless the Madhya Pradesh Government is doing its best. A system of metalled roads is being built up and several bridges have been constructed. Schemes for schools, uplift centres and medical aid are taking shape.

There is, however, no definite plan of development and much of the work is on the traditional lines of the more advanced districts.

A post of an officer of the rank and seniority of a Commissioner is therefore necessary. He will supervise the work of the three district officers, select and train his personnel, co-ordinate the various activities and take quick decisions on behalf of the Government. Although this Commissioner should be administratively responsible to the Madhya Pradesh Government his appointment should be approved by the Central Government and his salary paid in part by the Centre, because one of his main duties should be to establish a closer contact between Delhi and Nagpur in this field than exists at present. He will scrutinize the expenditure and secure grants from Delhi. He will be responsible to Delhi for the Central Government schemes.

Similar officers could also be appointed in other States. The cost will be small compared with the supervision and control which these officers will ensure. They will also prevent some of the present wastage of money and manpower.

There is no dearth of good officers in our country and there should be no dearth of finances for tribal development. What is needed is a proper system of planning and proper management.

The above is taken from an article in the *Harijan* of November 24 last written by "Mohitgar" who apparently is a man who is actively associated with the uplift of the "tribals," the original inhabitants of India who had once supplied kings, administrators, soldiers and commanders to vast area in this country. Today their descendants are found retired to deep forests and hilly countries and maintaining a sub-human existence for fear of alien touch and a measure to protect their own patterns of conduct. Their progress in modern setting is a problem that is almost international, every State having its underprivileged classes. In India, there may be special characteristics of their life worth preserving. But that would require a spirit of understanding and fellow-feeling that has not been generally found in human history.

"Mohitgar" writes with knowledge, and we share his views except the suggestoins about a paraphernalia of officers, high and low. It is notorious that a bureaucracy stifles sympathy, imagination and initiative—qualities that are found rarely in the bureaucracy. Perhaps, these are inevitable. But we have still faith in human nature to hope that whole-time disinterested and non-official workers will be available for all the activities that have to be carried if India of our aspirations is to be built up. "Mohitgar" is a living example of this.

Anti-Indianism in Pondicherry

The *Press Trust of India's* correspondent at Pondicherry was assaulted at a restaurant for being an Indian, and he was asked to leave if he valued his life This is not an isolated instance; if it had been so we would not have noticed it. But it has become a habit with a small section of Franco-Indians to indulge in these pranks. They fear that the French possessions in India, small places, three or four in number will form part of the Indian Union as Chandernagore has chosen to do. And for reasons unexplained they do not appear to relish this prospect. These hyphenated Indians are indeed a sorry lot. And during his sojourn on earth, Sri Aurobindo had to tolerate their hostility. They dared charge him, the "Mother," and the inmates of his Ashram, with being more French than Indian. This because the "Mother" claimed France as the land of her birth, and Sri Aurobindo was a lover of French culture and the Ashramites had no individuality of their own.

This perverted mentality had moved them to attack the Ashram even, and in June (1947) last a spokesman of this spiritual fraternity had felt the necessity of issuing a statement explaining the attitude of the "Master" in this particular matter. We publish it as it appeared in the Indian press as a record for reference for all times.

> "He (Sri Aurobindo) feels certain and has expressed it more than once, that the different parts of India, whoever may be their present rulers, are bound to join the mother country and that India, free and united, will become a dynamic spiritual force bringing peace and harmony to the war-scarred world and suffering humanity in general.
>
> Asked whether this meant that Sri Aurobindo desired Chandernagore, Pondicherry and other French settlements in India to join India, the spokesman said: "Certainly so." He (Sri Aurobindo)

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

has prophesied that these small foreign pockets in India would sooner or later become one with India and India would become the spiritual leader of the world.

As a spiritual home the Ashram as such adopts a neutral attitude towards the burning question of the day in Pondicherry, namely, the referendum to decide the future of the French settlements in India, the spokesman said. He, however, strongly refuted the notion in certain quarters that the Ashram is pro-French and referred to one of his public statements wherein he stated, nobody here (Ashram) is for the continuation of the French rule in India."

J. M. Rakshit, Rustomji Patel

Jamshedpur has reasons to commemorate the memory of two of its citizens—Dr. J. M. Rakshit and Mr. Rustomji Patel. As reported in *Tisco Review* of October last, we summarize their life-story:

Dr. J. M. Rakshit, for eighteen years Chief Medical Officer of the Steel Company, died in Calcutta on the 22nd September, 1951.

Born in 1891, he took his M.B.B.S. degree from Bombay University and his F.R.C.S. from Edinburgh. He was also an L.M. of Rotunda. He joined the Steel Company on the 1st February, 1927, as Deputy Chief Medical Officer, becoming Chief Medical Officer on the 11th November, 1931.

A first class surgeon, a popular and efficient administrator, a keen sportsman and in every way a worthly citizen, Dr. Rakshit participated in a variety of civic activities, but was particularly interested in the promotion of sports and games in Jamshedpur. He was President of the Bihar Cricket Association, of the Jamshedpur Sporting Association, the Jamshedpur Young Men's Association, the Milanee and a member of a very large number of sporting, social and cultural institutions. He was also District Surgeon of the St. John Ambulance Brigade, Jamshedpur.

Mr. Rustamji P. Patel, prominent businessman and one of the foremost citizens of Jamshedpur passed away on the 21st September, 1951.

Born on the 16th July 1888, he was at the age of 12, left on his own resources by the untimely death of his father at the early age of 32 in South Africa where he too had early gone to seek his fortune. Struggling against seemingly impossible odds, Mr. Patel made his own way in life without becoming cynical or ruthless in the process. Once fully established and prosperous, he assisted a number of young people in different circumstances to meet the difficulties which he had had to face alone in his youth.

Mr. Patel was associated with almost every known institution in Jamshedpur and Jugsalai. He was Vice-President of the Jamshedpur Notified Area Committee and a Trustee of the Jamshedpur Charitable Trust. He was a member of innumerable committees of social service institutions and it appeared to be a tacitly acknowledged convention by all citizens of Jamshedpur that whenever any worthy cause required a scrupulous treasurer in the organisation, Mr. Patel was the obvious choice.

Mr. Patel showed the deepest interest in education and had greatly contributed to the Jugsalai High School and the Jamshedpur High School both in funds and in service. He was its secretary and honorary treasurer and treaurer of the Jamshedpur High School.

Mr. Patel had left marks on the social life of Jamshedpur and he will be greatly missed by thousands of friends and admirers. A large number of institutions will find it impossible to fill his place.

Sadhan Chandra Roy

Bengal has lost an experienced electrical engineer by the death of Sri Sadhan Chandra Roy in his 72nd year. Second elder brother of Dr. Bidhan Chandra Roy, Sadhan Chandra was an engineer of note to whom more than any other, the present success of the Shillong and Gauhati Electric Companies are due. Naturally enough his activities were extended to the other fields of commerce and industry. We tender our condolences. May Sadhan Chandra Roy's soul rest in peace!

Lala Deshbandhu Gupta, Lajpat Rai, O. P. Samuel

Born on June 14, 1901. He was the son of a well-known Arya Samajist of Karnal district. At home, under his father's influence, he was nurtured in an atmosphere of revolutionary social progress. He was an undergraduate of the Punjab University when the agitation over the Rowlatt Report first began. The Report, and later on the Act based on it, rudely awoke him to the realities of the Indian political situation. Then followed the Jallianwallabagh Massacre and other Punjab wrongs which reacted violently on his sensitive mind. When Gandhiji's call for Non-co-operation came in 1920, it found a ready response from him; he left College and joined the national struggle. After sometime, however, the young scholar returned to his studies as many did, but he could not keep away from the field of politics. So, while continuing his studies he found a place for himself in the Tilak School of Responsive Co-operation then led by Lala Lajpat Rai who took him into service under him in conducting the *Bande Mataram*. Deshbandhu Gupta thus had his start in journalism under one of the makers of modern India. His training consisted partly of taking down the editorials for the paper, dictated by Lala Lajpat Rai.

After leaving College finally, Deshbandhu again joined Congress work; for some time he was engaged in organising Congress Committees in his native district of Karnal. Paying a visit to Delhi for inviting some of the leaders to Karnal, he took a prominent part in organizing boycott of the Prince of Wales'

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

visit. The Government's plan was to stage a welcome to the Prince with the co-operation of the depressed classes for which a conference was convened. The Delhi Congress Committee upset the plan by capturing the conference so as to carry it along the path of Non-co-operation. This success was in a great measure due to the bold and energetic efforts of Deshbandhu Gupta. He was soon elected Propaganda Secretary of the Delhi Provincial Congress Committee.

Before long, he was arrested and put into Naini Jail. It was during his stay here that he came into contact with Swami Sraddhananda and his subsequent political career was shaped by the joint influence of the idealism of the Swami and the personality of Gandhiji. On his release from jail in 1923, Deshbandhu Gupta found a job in the Swadeshi Store in Delhi. Sometime in 1923, Swami Sraddhananda founded his well-known paper *The Tej* and invited him to become its first editor. The murder of Swami Sraddhananda in 1926, threw additional burdens on him, and he had now the sole charge of *The Tej*. It was his ability as a journalist no less than the memory of Swami Sraddhananda's martyrdom, that very soon made *The Tej* a powerful organ of Indian nationalism.

The paper ceased publication for a while in 1931 as a protest against the Government of India's Public Safety Ordinance of that year when the Civil Disobedience Movement was on. He had, in the meantime, been sent to jail for a year in connection with his work for *The Tej*.

In 1942 when the Congress launched on the "Quit India" Movement, Deshbandhu Gupta stopped publishing his paper in response to Gandhiji's call. It was the only Urdu daily to participate thus in this last struggle for India's freedom. Deshbandhu Gupta was at this time taken into custody together with some of his colleagues in the paper and put into detention for a fairly long term. In 1946, he was elected to the Indian Constituent Assembly. In 1950, he was elected Chairman of the All-India Newspaper Editors' Conference, he was also President of the Delhi State U. N. Association for some time till last year. Early in 1951 he was elected Chairman of the Indian Federation of the United Nations Associations.

Lajpat Rai was born in 1917 at Sheor in Bhopal State, he belonged to a Seth family and was the son of late Ranjit Singh, a landlord in Bhopal. The family originally came from Pindri, district Karnal (Punjab), but later on settled in Bhopal. He had his early education in Bhopal and Pilani (Rajasthan) and showed promise as a public worker from his student days. He took part in all important political movements during the last decade. He was a prominent worker of the Bhopal Branch of the All-India States Peoples Conference. He was for a considerable time Private Secretary to Janab Asaf Ali, and acted as such till the latter became India's Ambassador in Washington. Later, he worked as the Secretary to the Congress Party in the Constituent Assembly; he was appointed Secretary to the All-India Newspaper Editors Conference in 1949. He was a prospective candidate on Congress ticket for the House of the People from Bhopal Constituency. He was to have left for Bhopal on his return from Calcutta after attending the meeting of the Standing Committee of the A.-I.N.E.C. A young man of amiable nature and pleasant manners he was popular in the model *basti*, the locality in Dlehi where he lived. He leaves behind him a young widow, old mother, one younger brother, three sons and one daughter, a large number of relatives and friends to mourn his premature death.

O. P. Samuel, known amongst his friends as "Siss," was connected with the advertising profession in India for 23 years. He was one of the pioneers of Indian advertising and greatly helped to improve the quality of its service. He was a delegate from India to the recent International Advertising Conference held in London. His work at the Conference had gained for India a good response from the Press abroad. This success brought him into the *Free Press Journal* (Bombay) as its manager, and his death removes a great figure from the journalistic world of India.

There were thirteen other deaths owing to the air-crash at the Dum Dum airport on November 21 last. Most of them were cut off from their career in its height. Deshbandhu Gupta, Lajpat Rai, O. P. Samuel will be almost irreplaceable in their offices. To the families of these men we tender our condolences. God grant them strength to bear this loss.

Shri Shoorji Vallabhdas

We regret to record the death of Shoorji Vallabhdas, who breathed his last in Bombay on the 14th November at the age of 64. He was associated with the old All-India Village Industries Association, Wardha from its inception, and was a member of its Managing Board. He took interest in *Go-seva* also.

His courteous behaviour, sense of humour, regular and clean habits and kindly disposition, together with his keen business acumen, judgment of men, and capacity to detect sharp practice, were pleasing to all.

He was a devoted follower of the Arya Samaj and its generous patron. About a week ago, he sent a sum of Rs. 12,600 and odd which had been lying with him to be utilized for helping constructive workers in distress. The amount has been credited with the A.-I.S.A. for being administered according to his instructions.

In the Sarva Seva Sangh, the Village Industries Department in particular, has lost a valuable friend in him. May his soul rest in peace!

CHURCHILL'S VICTORY IN 1951 BRITISH ELECTION

Estimate of an Asian

By Prof. TARAKNATH DAS, ph.d.

In the General Election of October 25, 1951, although the British Labour Party had more votes—taking the total votes cast in Great Britain—than the British Conservatives,—the British Conservatives under the leadership of Hon. Winston Spencer Churchill have won the victory. Industrial centres with large working class population voted for the Labour, while the rural districts favoured the Conservatives. On the basis of popular votes, the Labour won; while on the basis of constituencies, the Conservatives a minority party (from the standpoint of popular votes) won. Thus this victory of the Conservatives is not a very secure one. However, ascendency of Mr. Churchill in British politics is a revolution affecting not only British politics but world politics as a whole.

To be sure, Mr. Churchill, on the basis of his former utterances at Harvard University and also Fulton (Mo), will try to strengthen Anglo-American partnership in every possible way. He will try to convince Mr. Truman that the British Conservative Party will make "Anglo-American collaboration in world politics" the cardinal principle of British foreign policy. Mr. Churchill will abandon the British policy under the Labour Government in so far as it was opposed to increased armament production and formation of solidified "United Europe" against Soviet Russian expansion. Of course, Mr. Churchill will ask for greater economic aid for Britain, so that for purely financial reasons, she may not have to supply war materials like rubber and other articles on large quantities which may be useful to Soviet Russian war economy. In fact, Mr. Churchill will try to formulate an Anglo-American Foreign Policy, as he did during the late Franklin D. Roosevelt's administration, which will be most beneficial to Britain. Indeed Mr. Harriman has been given the role of the late Harry Hopkins and the former has already gone to London to consult Mr. Churchill.

Mr. Anthony Eden, the Foreign Minister of Britain, will play an important role in helping Mr. Churchill in carrying out his world policies. In this connection, one should carefully read the speeches of Mr. Eden last summer during his tour in the United States, specially at the University of Denver. In these speeches Mr. Eden emphasised the point that Anglo-American world partnership in world affairs is the most important factor in maintaining world peace. To be sure, the United Nations is a very important instrument for furthering the cause of peace; but in the field of practical politics Anglo-American co-operation is more important than the United Nations. Mr. Eden tried to convince his American friends and audience (and he did not have very great difficulty in carrying out his purpose), that America needs British support no less than British needs American support to maintain their mutual interests.

II

In Anglo-American collaboration, the question of checking Soviet Russia in Europe will have its first place. It seems that there will be no difficulty in pursuing a common foreign policy and common defense policy which will amount to this: Germany must be utilised to the fullest extent in matters of European defense against any further Soviet Russian expansion. However, the question of economic recovery of Germany which may again become a serious competitor of Britain may be a sore point for Britain. But Mr. Churchill will find it difficult to oppose American policy of full collaboration with Germany, inasmuch as Mr. Churchill has been an ardent advocate of a United Europe in which Germany should be accorded an equal partnership.

Mr. Churchill will do his best to re-assert British power in the Mediterranean and the Middle East. This will bring him face to face with difficulties with Egypt and other Arab countries as well as Iran. It seems that the United States Government has taken a stand regarding the Iranian oil issue to the effect that Britain should honour the nationalisation of oil policy of Iran, while Iran should make a reasonable settlement regarding compensation due to Britain which owns more than half of the shares of the Anglo-Iranian Company. To avoid any anti-American reaction in the Middle Eastern oil countries, America will not take an out-and-out pro-British stand against the Iranian claims. It seems that Britain will have to accept a compromise solution on Iranian Oil issue, as it may be worked out at Washington.

In solving the Anglo-Egyptian dispute, Mr. Churchill and his Foreign Secretary will have to stick to the programme of the Labour Government, which adopted the policy of maintaining British forces in Egypt and the control of the defence of the Suez Canal and also continuance of indirect British control over Sudan. It is also certain that the Egyptians will not quietly surrender to British usurpation of Egyptian sovereign rights under the cover of a treaty. If the Anglo-Egyptian statesmen have the far-sightedness

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

which is needed to solve the present crisis, they should follow the wise policy of Viscount Allenby in Egypt, instead of the present policy of aggressive demonstration of British power in Egypt. Field Marshall Viscount Wavell in his study of *Viscount Allenby in Egypt* has clarified that

> "It would have been easy enough with the force at his (Allenby's) disposal to take stern measures of repression and retaliation; but these could only make it more difficult to arrive at the friendly understanding with the Egyptian people without which our (British) position in Egypt would have been impossible."—Viscount Wavell: *Allenby in Egypt,* London, Oxford University Press, 1944, page 41.

During the era of 1919-22 when the Wafd Party of Egypt under the leadership of Zaglul Pasha was determined to end British protectorate, British statesmen of the type of Milner, Curzon, Lloyd George, Churchill and others were opposed to making any concession, unless Egypt first agreed to sign a treaty which would safeguard British rights in Egypt, to maintain forces in Egypt for the defence of the Canal and continuance of con-dominion in Sudan. Viscount Allenby, the then British High Commissioner in Egypt and a British patriot, was also an advocate for upholding British rights, but he suggested that the British should at first renounce the protectorate over Egypt and then under a new friendly atmosphere should negotiate a treaty. Viscount Allenby was denounced by many Tories of those days; but in the end his wise statesmanship prevailed. The British did end the protectorate and then a new treaty between Egypt and Britain was signed.

It is to be expected that due to American stand for moderation, Mr. Churchill's Government will not favour continued forced occupation of the Canal zone and further antagonising the Egyptian people. If the Anglo-American statesmen follow Allenby's policy, then the Egyptians will follow the Turkish example of full collaboration with the Anglo-American Powers. Bullying tactics will not work in Egypt; but it may have its repercussions against the Anglo-American Powers (specially the United States) in Arab lands. Arabs, like the rest of the world, know that Britain, without American aid and support, would not be willing to risk using force in the Middle East. If America wishes to avoid trouble in the Middle East, then she will have to make it clear to Mr. Churchill that moderation and conciliation with firmness will be the policy for them to follow.

It has been a matter of speculation on the part of many that Mr. Churchill and others may suggest that the Jews (the State of Israel) should be used against the Egyptians. To be sure, the Jews are not in friendly terms with the Egyptians and the present Anglo-Egyptian conflict has comparatively improved Israel's position in world politics. But every Jewish statesman must bear certain amount of suspicion against Messrs. Churchill and Eden, the architects of the Arab League to be used against the French and the Israelis. Furthermore, many far-sighted Jewish statesmen would regard it to be a great folly for them to encourage British aggressiveness against Egypt or any part of the Middle East. To be sure that Israel should actively co-operate with the Anglo-American Powers and Turkey for the defence of the Middle East; but it will not be to the interest of Israel to act as a mere tool of Mr. Churchill's policies in the Middle East and thus worsen Israel's relations with Egypt and other Arab States.

To check Soviet Russian and Communist Chinese aggression in East Asia and the Pacific, the American Governmnet will continue to co-operate with Japan. Under these circumstances, Mr. Churchill will have to co-operate with America. But Mr. Churchill's prime interest in the Pacific is to protect Hongkong and also secure the major part of China trade. To assure these objectives the British Government recognised Communist China. But any aggressive collaboration of Britain, America and Japan may induce the Chinese Communists to take over Hongkong which will be injurious to Churchill's prestige and Britain's vital interests in the Pacific. In the past Mr. Churchill had been very stubborn regarding the retention of Hongkong at any cost. One of the causes of the rift between Churchill and General Chiang Kai-shek was that the latter wanated to recover Hongkong while Churchill even threatened the end of Anglo-Chinese collaboration. In the Cairo Declaration, Churchill forced General Chiang to omit the mention of recovering Hongkong from the British. It is however clear that the British cannot retain nor recover Hongkong without American support. Therefore Churchill will try to play China against Japan, but will have to co-operate with the United States in the Pacific, as Australia has agreed to do.

III

Mr. Churchill during his election campaign and on various occasions has repeatedly suggested that he would try to have a conference of Stalin-Truman and himself to settle all outstanding problems and to further the cause of peace. What may be the outcome of such an effort?

It is needless to emphasise that Churchill's main interest is to protect British interests all over the world. It was once reported that while some one opposed Churchill's proposition of making an alliance with Soviet Russia, the veteran British statesman answered that he was opposed to Communism but would not hesitate to make an alliance with Soviet Russia—even with a Devil—to protect and further the interests of the British Empire. It is also a historic fact that Mr. Stalin, to get Churchill's support against the Nazis, at a conference in Washington, through M. Molotov, gave full support to Churchill against Indian Freedom, while Roosevelt and Chiang Kai-shek were

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

in favour of Indian Freedom. Thus an Anglo-Russian deal may not be improbable.

In fact, Mr. Eden will have the opportunity of seeing M. Visinisky at the Paris meeting of the United Nations and broach the subject. If Soviet Russia agrees to recognise British interests in the Mediterranean and the Middle East and South East Asia, then Britain would support Soviet Russia's claims in Central Europe and the Balkans. None should forget that Churchill, to appease Stalin, agreed to Soviet demands in Poland, which has resulted in Soviet control over Poland. If such an agreement between Soviet Russia and Britain be possible (which will be popular in Britain), then Churchill and Stalin would try to induce Mr. Truman to join them in a Three-Power Pact by which America will be given assurance of non-interference by Soviet Russian and Communist Chinese allies, in the Pacific.

If such an agreement be arrived at among Britain, Soviet Russia and the United States, it may take the form of a *new super-Yalta,* with Churchill as the chief architect, Stalin as a supporter and Truman as a follower. But it should be expected that this super-Yalta will not last very long as Neville Chamberlain's pact with Hitler at Munich, which had the full support of Franklin D. Roosevelt and his supposedly anti-fascist advisers. So far as Britain will be concerned, this agreement with Stalin will be definitely directed against economic and political recovery of Japan, Asian countries and Germany which will become a source of greater tension in these lands, which might later on give a chance to Soviet Russia to win over Germany, Japan and other Asian countries in the ever-widening sphere of expansion. Will Truman agree to any such agreement?

IV

Mr. Churchill is no friend of the Asian peoples. His attitude towards them has been typically fascist —political, economic and racial imperialism. He was not only opposed to Indian Freedom but he was one of the main architects of partition of India. He wholeheartedly supported the Moslem League of Jinnah and his programme and gave every possible aid to bring about Pakistan which is a cancer on the side of India. During the Hyderabad dispute his sympathy and support was for the Nizam and opposed to India. It is notorious that Mr. Churchill and his friends have been actively supporting Pakistan in regard to Kashmir dispute.

India knows that irrespective of any political party, Churchill has been and remains an enemy of India and his government will do its best to use American support against India's vital interests. This will force India, unless America can convince the Indian public that America is not anti-Indian, to seek support from elsewhere. It would mean that India will try to cement Indo-Chinese-Russian collaboration and support Egypt in every possible way except going to war against Britain. There is certain indications in this direction. Mr. Panikkar, India's Ambassador to Peking, is going to attend the United Nations Session in Paris where India will again champion the cause of Communist China for the Seat of the Security Council. It has been also reported that Mr. Nehru has given an interview to the effect that he favours Egyptian sovereignty over the Suez Canal.

In case Mr. Churchill continues to pursue anti-Asian policies and receives American support the result will be the rise of anti-Anglo-Americanism all over Asia, including Japan. The Japanese have not forgotten that Churchill was opposed to any compromise with Japan before the Pearl Harbour attack. In fact, the Japanese believe that Roosevelt's unbending opposition to Japan was partially, if not greatly, due to Churchill's anti-Japanism. Nationalist China as well as Communist China is opposed to Churchill's policies. Today Iran, Egypt and all the Arab States are suspicious, if not hostile to Churchill's policies. Any mistake in dealing with Asian countries, following Mr. Churchill's demands which may ignore sovereign rights of Asian countries, will be utilised by Soviet Russia to spread her influence in Asian lands.

To be sure, Anglo-American Powers with their Atlantic Allies and with the support of Japan, Germany and Turkey will be able to hold their own against any combination of Powers in favour of Soviet Russia in Europe and Asia. Wise statesmanship on the part of America demands that, due to British policy—Churchillian policy—against Egypt, India and other Asiatic peoples may not be induced to make a common cause with Soviet Russia.

I wish to emphasise that Indian statesmen should realise that their making a common cause with Soviet Russia, to check any possible mischief which might be caused by Churchill's policies, will be most dangerous for the future security of the State. The safest policy which should be pursued by India is, while preserving friendly rtlations with other nations, to have close collaboration with the United States, Japan, and that China which is not an ally of Soviet Russia. This will further the cause of her national security and Asian independence.

IRRIGATION IN INDIA

Its Past and Present

By Prof. C. B. MAMORIA, M.A. (Geog.), M.Com.

The success of agriculture certainly depends in a very large measure upon, *inter alia*, adequate and regular water supply. There are many reasons why the cultivation of land in this country is not as efficient comparatively and as productive per unit of land cultivated or labour employed as in other countries, notwithstanding certain advantages of soil and climate. Amongst these, the scarcity, uncertainty or irregularity of water supply may easily rank the highest. The main source of our water supply needed for agriculture is, of course, the annual rainfall. Thanks to the wonderful working of Nature, rains come to water the parched lands on more or less fixed date so as to facilitate the several stages of agricultural operations nicely dovetailing them one into the other.

Necessity of Irrigation

The rainfall, though on the whole abundant, often fails, on an average once in a decade, *e.g.*, the normal annual rainfall varies from 460 inches at Cherrapunji in the Assam Hills to less than 10 ins. in Western Rajputana. This shows that not only is the rainfall inadequate but it is also unequally distributed throughout the seasons. By far the largest portion of rain in the country (except south-east of the Peninsula) falls between June and October. During the rest of the year it is very little. It is because of this tendency of rainfall and its liability to failure that before the era of railways and canals "ghastly famines ravaged the country periodically and scarcity was the common lot of the people over large areas in many years."[1] Thus the water is not available precisely as and when it is required though in the same season it may be in excess in some parts and deficit in others. Where it is in excess it causes heavy floods which damage the land or standing crops; while where it is deficient it creates conditions of scarcity bordering upon or eventuating in a famine. Successful cultivation cannot be assured for any considerable period unless facilities are available for watering crops artificially when necessary.[2] "It was because of the realization of the supreme importance of irrigation that in India it has been practised, from time immemorial, to supplement and conserve the rainfall by construction of wells and storage reservoirs, and by bunding streams."[3]

Some Crops Require More Water: Besides, some crops like rice and sugarcane require a regular and abundant water supply which is rarely provided except in the most favoured regions. The intensive cultivation of land under the pressure of increasing population has made second or winter crop necessary and this requires artificial supply of water in the absence of winter rains.

Earlier Cessation of Rainy Season: In some years the rainy season ends earlier when agriculture requires more water. So if crops are not watered, India has to face the terrible famines which cause untold miseries and hardships to the population. So in order to overcome these chronic droughts irrigation is necessary.

Geographical Factors Favouring Irrigation

There are certain geographical factors which have led to the development of irrigation in India. They are:

(1) The rivers rising from the Himalayas are perennial, as they have their courses through the perpetual snows of the Himalayas, which give them constant supply of waters.

(2) The slope of the plains is so gradual that the canals which are taken out in the upper courses of the rivers can easily irrigate the land in the lower valley.

(3) There is an utter absence of the rocky ground in the northern plains and this enables the easy cutting of the canals.

(4) The soil is fertile which makes the greatest use of irrigation and

(5) The clay in the sub-soil is in such a depth that acts as reservoir for the rain water which sinks through the porous alluvium of the plains and which is later tapped by wells.

Different Types of Irrigation Works

The geographical factors have determined the predominance of a particular kind of irrigation method in the particular portion of the country. There are three main types of irrigation works—canals, wells, and tanks. All those sources irrigate about 50 million acres of the Indian soil. Of this area, about 50 per cent is irrigated by canals, 30 per cent by wells, 10 per cent by tanks and 10 per cent by other sources.

All kinds of irrigation works are not suitable for every kind of soil, *e.g.*, the alluvial tract is specially suitable for canals and wells, in the crystalline tracts irrigation from tanks is most extensive and in the Deccan tract a considerable area is cultivated under wells.[4]

The area under irrigation in India is over 50 million acres. This is the largest of the areas irrigated in any country of the world, two and half times the area irrigated either in U.S.A. or in Pakistan. The acreage irrigated in India exceeds the combined acreage under

irrigation in U.S.A., the U.S.S.R., Japan and Italy.[5] These five countries, between them, occupy roughly ten times the area of the Indian Union. The following table gives the extent of irrigation in India as compared with Pakistan:

Irrigation in India and Pakistan, 1945-46
(in thousand acres)

Region	Irrigated area	Net area sown	Irrigated area as percentage of net area sown
Undivided India	70,700	286,216	24.5
India	48,228	236,808	20.2
Pakistan	22,482	49,418	45.0

The length of India's irrigation channels is over 60,000 miles, more than two and a half times the circumference of the earth. Years ago Sir Charles Trevelyn observed:

> "Irrigation is everything in India. Water is more valuable in India than land, because when water is applied to land it increases its productivity at least six-fold and generally a great deal more; and it renders a great extent of land productive."

In India, irrigation has a two-fold purpose, *viz.*, a protective purpose to ward off the famine in certain areas and a productive purpose to increase the productivity of the soil.

Well Irrigation

The well-irrigation is the most important and most indigenous form of irrigation in India. It is well suited to the poor farmer, because it is cheap to build, it requires no elaborate machinery to work it, and does not need any specialised engineering skill to build or work it. The wells used include fissure wells in rocks, spring wells and tube-wells which vary considerably in depth, or tubes of small base from which by power pumping large supplies of water can be obtained continuously throughout the year.[6]

Well-irrigated Areas: Well-irrigation is more important in:

(1) The Indo-Gangetic basin. The Western U. P. is particularly noted for well-irrigation. In fact, "the whole of the area from Benares to Delhi is drilled like a seive with wells of ten to fifteen feet depth."

(2) The southern black cotton soil tract and Bihar and Assam.

(3) The sub-montane areas on the eastern side of the Western Ghats including the southern districts of Bombay and Madras especially Coimbator, Madura and Ramnad.

(4) The sub-montane regions of the East Punjab, U.P. have 51.5 per cent of its irrigated area covered by wells, the Punjab 25.4 per cent, Bombay 14.0 per cent, Madras 17.8 per cent, Bihar and Orissa 11.7 per cent, the total area irrigated by wells in India being 11.7 million acres.

The method of lifting water differs in different parts of the country and to a very great extent the method adopted is the most suitable for that area.[7]

Well-irrigation has definite advantages of its own which make something like 30 per cent of the total irrigated areas in this country come to be served by this means. Because the well water entails trouble on the part of the cultivator for raising it from varying depths, he is naturally careful and economical in its use. Due to the high cost of lifting water from the well, it is generally used for high-grade crops. Its *prorata* burden is consequently reduced and benefit increased. It has been estimated that well-irrigated land is more important than canal-irrigated land. No doubt well-irrigation serves in bulk large areas from a single system; and so has helped to bring what were practically desert regions under the plough. The canal also helps to improve the chances of well-irrigation.

There is still a large scope for the expansion of well-irrigation in India. The Royal Commission on Agriculture thought that every effort should be made to encourage the formation of co-operative societies for the construction of wells. The Government should also on its own initiative construct wells in the rural area and grant literally *takkavi* loans for the purpose, and levy reasonable charge on those who utilize the well-water for irrigation. The limit of great irrigation works have been reached, more attention will have to be paid in future to sub-soil water as the source of supply for new fields to be developed to meet the ever-increasing pressure of population on land.

As early as 1903 the Indian Irrigation Commission maintained that there was no single province in India in which irrigation from well might not be very largely extended with advantage and that in areas where sub-soil water lies close to the surface of the soil, well-irrigation is actually preferable to canal-irrigation. Recently, considerable official encouragement has been given to the construction of wells under the 'Grow More Food' campaign. The Famine Inquiry Commission of 1944 had recommended that the State should encourage the development of private wells

5. The approximate area under irrigation in these countries is: India 50 million acres; U.S.A. 20 m. acres; U.S.S.R. 8; Japan 7; Egypt 6; Mexico 5.7; and Italy 4.5 million acres.

6. *Agricultural Commission Report*, pp. 232-33.

7. The following are the more popular means of raising water from a lower level to that which will command the area to be irrigated:

(1) The single mouth with a self-delivery tube which automatically empties the water when it comes up to the mouth of the well. In U.P. they are not provided with self-delivery tubes, hence an additional man is needed for emptying the leather bag when it comes at the mouth of the well.

(2) Where underground water is abundant Persian wheels are also used, as in Rajputana, Punjab, Kathiawar, and Bombay.

(3) The *Dhekli system* is a crude contrivance for raising water. It consists of a long pole working on a post and weighed commonly with compact mass of mud at one end and a bucket attached by a long rope to the other end. The water is raised in small quantities and the process is very weary and monotonous. Vegetable growers adopt this system with great convenience and economy.

(4) The *Boki system* in which two men stand on opposite sides of the water-pit holding the strings attached to flattened out leather basket throw water from a low level to a high one.

by: (*a*) the collection of full information as regards subsoil water supply, (*b*) the appointment of a special staff charged with the duty of advising and assisting the villager in the sinking of wells, (*c*) the grant of *takkavi* advances, and (*d*) the introduction of more efficient means of lifting water especially in tracts with a deep water table.[8]

Tube-wells are comparatively of recent development in India. Technical advice and assistance are given by the Government Department for their installation, usually for moderate fees. Four conditions are in general essential for the success of a tube-well irrigation scheme, *viz.*, (1) the flow of water in the subsoil must be adequate to meet the surface demands, thus ensuring a stable water table; (2) the depth of this water table below the ground level must not ordinarily exceed about 50 feet; (3) the irrigation demand must prevail over a wide tract for an average period of not less than 3,000 hours in a year; and (4) electric power must be available over the tract in question at a rate not exceeding half an anna per unit.[9]

The use of tube-wells and power-driven plants for irrigation purposes have been of very recent origin in India. These wells have an advantage over canals in this that the water can be taken directly at the places required and the flow on the spots takes place by gravity *e.g.*, in the Ganges Valley it has been estimated that the most economical well is that which yields 33,750 gallons per hour. The area that may be irrigated from such a well is a variable factor and depends upon the climate, crop and soil conditions but on an average it may be said that it can irrigate at least 120 acres of sugarcane and 300 acres of *Rabi* crops. The cost of pumping water depends upon the efficiency of the pumps, the detph of water and the price of electricity or other sorts of fuels.

Tank-Irrigation

Tanks and embankments are a special feature of the Deccan. The rivers of the Deccan are not snow-fed and they are solely dependent upon rain water. There are many streams which become torrential during the rainy season but dry up in the season when the rain ceases. The undulating character of the region together with a rocky bed makes the construction of wells prohibitive. Moreover, as the hard rock does not suck up water so wells also cannot be made there. But the tanks can be easily made by means of constructing dams in hollow spaces in which rain water is stored in large quantities for distributing a regular supply of water through the channels to the arable lands in the winter season. Lastly, the scattered population of the tract also favours the system of tank-irrigation. So this is the only possible and efficacious method by which the abundant rain water can be conserved that would otherwise flow out uselessly into the ever-hungry ocean. Tank-irrigation has reached its highest perfection in the south, specially in Madras.

The tank may vary in size. It may be any thing from a work like Lake Fire and Lake Whiting in Bombay or Periyar Lake in Travancore State to the very small village tank capable of irrigating about 5 acres or even less. The large works are few in number, need considerable technical assistance and require a large expenditure of money to make them reasonably safe against breaches. Government agency alone is, therefore, suited to the construction and maintenance of such works. But there are numerous small units scattered all over the country, the maintenance and repair of which by a Government Department might be said to offer as difficult a problem as maintaining village tanks in repair. Further, it has come to be regarded as an axiom by Irrigation Engineers that it is less costly in the long run to allow these works to breach every 15 years or so than to go the expense of preventing breakdown under abnormal conditions. Their upkeep should be entrusted to the village communities concerned who can give the requisite attention in time. This needs the formation of broad policies and the enactment of suitable laws to make the policies effective.

Canal-Irrigation

Canal-irrigation is the most important form of irrigation in India because of its cheapness, and the ease and certainty with which water is supplied. The irrigation canals of northern India which turn to productive use the water of the Indo-Gangetic system rank amongst the greatest and the most beneficent triumphs of modern engineering in the whole world. The canals in India are of two classes, *viz.*, inundation canals and perennial canals.

Inundation and Perennial Canals

The inundation canals are drawn directly from the rivers without making any kind of barrage or dam at their head to regulate the flow of the river and the canal. They get water when the river is well-flooded and not when the water-level of the rivers is low. But as soon as the flood subsides and the water-level of the rivers is reduced below the level of the canals' head, these canals dry up. The great defect of these canals is that the water supply is quite uncertain. They provide irrigation mostly during the rainy season. During the dry season when irrigation is needed most these canals are useless because of their dryness.

On the other hand, the perennial canals are constructed by putting some form of barrage across the river which flows throughout the year, and diverting its water by means of a canal to be irrigated. Such canals are independent of the natural level of the water in the river. Within this class falls the canal system of the East Punjab and Uttar Pradesh.

Ways of Charging Water Rates

The charges for irrigation water are levied in

8. *Famine Enquiry Commission Report*, pp. 135-136.
9. *Famine Enquiry Commission Report* (1945), pp. 133-134.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

different ways in the different provinces, *e.g.*, in Madras and Bombay different rates of land revenue are charged according as the land is irrigated or not. The former includes the water rates. In other parts of India, the water rate is a separate charge and is adjusted to the benefit received approximately. The area actually irrigated is measured and a rate is charged per acre according to the crop grown. By this means the water rate is adjusted to the service rendered. Lower rates are charged where water has to be lifted to a higher level; while where the mere flow of water by gravitation irrigates the land, the rates are somewhat higher. In some cases the outlets of canals for water are rented for a lump sum; or the charge is made according to the volume of water actually used. But these methods have proved cumbersome and unpopular. Water rates, therefore, on the whole follow the principle of "No crops, no charge." The cultivator naturally dislikes to be liable for water rates which have no connection with the area under cultivation or the quality of the crop raised.

The rates, it may be added, vary from Province to Province. Even in the same province they vary according to the nature of the crops, *e.g.*, for sugarcane it vraies from Rs. 7-8 to Rs. 12 in Madras; from Rs. 9 to 11 in East Punjab and from Rs. 5 to 12 in U.P. Similarly for wheat it varies from Rs. 4-4 to Rs. 4-4-7 in East Punjab and in Madras, and Rs. 3 to 5 in U.P.

If extra crops are grown and additional water is needed an extra charge is made for the same. If the crop fails to mature, or if the yield is less than normal, either the whole or part of the irrigation assessment is remitted. In contrast with this practice, in West Bengal and Madhya Pradesh, there is a system of long-term fixed charge whereby the cultivator pays a small rate for a term of years, whether or not he takes the water. This practice is suitable for these provinces as the normal rainfall there is generally high and may be depended upon for the required water supply. Artificial irrigation is thus a kind of luxury for which the cultivator would not pay a high rate, as he would not ordinarily need extra water costing excessively in his judgment.

Irrigation works have nevertheless been constructed to guard against possible failure of rains; and so the most acceptable method seems to be to make an initially lower charge, which makes water available to the cultivator when he wants it during the terms of years for which the charge is fixed. From the viewpoint of the cultivator this is also economical as he need not wait till the last moment for the water he may need. And from the point of view of the Government also, it is fair as a certain minimum charge is assured to ease the burden of interest and maintenance charges.

Government Classification of Canals

Canals are classified by the Government in a different way. Before 1921, they were classified as (*i*) Productive, (*ii*) Protective and (*iii*) Minor.

(*i*) *Productive works* are those which are expected to yield a net revenue sufficient to cover the interest charges on the capital invested within ten years of their completion. Such works are financed from the general revenue or more often from funds raised on Government security. Most of the largest irrigation works in India belong to this class.

(*ii*) *Protected or unproductive works* are not expected to yield a direct return but are a mere measure against famines. They are financed from the current revenues, generally from annual grants for famine relief and insurance.

(*iii*) *Minor works* are small works for which detailed capital or revenue accounts are not maintained. Such works may be productive or unproductive.

Since 1921, this classification has been abolished. Now loans can be raised for any work of public utility. Now all irrigation works for which capital and revenue accounts are kept are classified under two main heads: (*i*) Productive and (*ii*) Unproductive. A third category is those of which capital accounts are not kept. The following table shows the area irrigated by Productive, Unproductive and Minor works during 1945-46:[10]

Province	Productive works (Acres)	Unproductive works (Acres)	Minor works (Acres)
Assam	..	..	3,401
Bihar	654,520	122,324	..
Bombay	4,246	456,527	180,320
C. P. and Berar	..	709,109	56,708
East Punjab	3,644,110	27,814	..
Madras	4,534,713	409,515	1,421,999
Orissa	..	339,564	282,577
U. P.	4,069,841	1,801,497	82,438
West Bengal	..	265,256	..
Total India	12,907,430	4,131,636	

Development of Irrigation

During the last sixty years there has been a steady growth in the irrigation from the State works. The total area irrigated was 10.5 million acres in 1878-79. It rose to 28.1 million acres in 1919-20, to 28.33 million acres in 1922-23, to 28.2 million acres in 1926-27, to 31.64 m. acres in 1929-30, to 32.5 m. acres in 1936-37 and 48.2 m. acres in 1945-46.

The main increase has been in the class of productive works, which irrigated 4½ million areas in 1878-79, 10.5 million acres in 1900-1, 20.76 million acres in 1926-27; 23.50 million acres in 1929-30 and 27.73 million acres in 1935-36 and 26 million acres in 1941-42.

New Schemes

During the last five years there have been considerable activities in all parts of the country in connection

10. *Indian Year Book*, 1949, p. 431.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

with the new irrigation and hydro-electric projects. After preliminary or detailed investigations, a large number of new construction schemes have been taken up. Some of these schemes are purely for purposes of irrigation, some are purely for generation and transmission of hydro-electric power but there are others which are multipurpose in nature.

Today 135 such schemes, at a total of Rs. 590 crores are under construction in different parts of the country. Twelve of these may be called major projects, costing over Rs. 10 crores each and Rs. 439 crores in all. There are 24 medium-sized projects costing between Rs. 2 and 10 crores each, Rs. 103 crores in all. In addition, there are 99 smaller schemes costing less than Rs. 2 crores each and Rs. 48 crores in all. It will take six to ten years before these projects are completed; it will take a few years more for irrigation to be developed fully and yet a longer time to build up the load for the entire hydro-power potential that will be developed by these schemes.

Water Resources Dispute between India and Pakistan

A dispute has arisen between the East and the West Punjab Governments regarding the supply of water by East Punjab to the Central Bari Doab and the Dehalpur Canals in West Punjab. With the partition of the Punjab, the Upper Bari Doab canal system has been dissected diagonally, and about 40 per cent of the area hitherto irrigated by the Upper Bari Doab Canal now lies in West Punjab. Secondly, the Ferozepore headworks lie in East Punjab, whereas the Dehalpur Canal and the Sutlej Valley Canals, which take water from the Ferozepore head-works with their entire irrigated area are in West Punjab. As the sources of supply of water are in East Punjab, while the areas hitherto irrigated from these are located in West Punjab, an inter-dominion conflict on the ownership of and rights to canal waters has arisen. In December 1947, the East Punjab and the West Punjab Governments entered into a stand-still agreement for the supply of water to West Punjab. Thereafter the Government of East Punjab contended that the proprietary rights in the waters of the rivers in East Punjab vested wholly in them. The West Punjab Government agreed that after a period of two years from June 1948 during which it would receive water as usual in gradually diminishing quantity, it would try to create alternative sources. The Government of East Punjab does not want that West Punjab should take this water in future. It wants to go ahead with the Bhakra Dam Project, for which it has to draw water from this source. The East Punjab Government also wants to utilise waters of the river Beas for bringing land under irrigation in South-East Punjab, particularly in the districts of Hissar and Rohtak where there was a famine in 1939. This quarrel regarding the use of water from East Punjab canals and head-works by West Punjab cultivators has taken the form of a dispute in International Law.

Economic Effects of Canals

The economic effects of the development of canals on agriculture, population, trade and industry are tremendous in places of habitually deficient rainfall like Rajputana and the areas that lie in the famine zone like U.P. and C.P. and Deccan Plateau. The irrigation facilities in these provinces have averted the great disaster that might be brought by the chronic droughts and saved millions of people from death. It is said and not without foundation that India adds every year an Egypt to its lands. They have banished the grim spectre of famine and brought peace, prosperity and a higher standard of living to the whole country.[11] Various parts of India which were once treeless, waterless, sunburnt waste-lands have now been converted by the beneficent hand of man into flourishing lands. As Mr. Darling puts it, "The colonies have, in fact, opened (for the Punjab) an era of prosperity undreamed of in the past."[12]

The increase in irrigated lands has been a boon to the cultivators for not only is the out-put of their fields ensured in ordinary years of drought but also the amount of produce is very largely increased in ordinary years at a comparatively low cost. Mr. Mukhtar Singh was of opinion that artificial irrigation can step up production by 26 per cent. Dr. Sudhir Sen asserts that increase in yields due to irrigation is considerable, in case of rice the increase is 50 per cent and in case of wheat 66 per cent. The experiments conducted on paddy and wheat under irrigated and non-irrigated conditions in Madras, Madhya Pradesh and Uttar Pradesh confirm that irrigated crops, if well managed, yield twice or three times in comparison to rain-fed crops. The Advisory Board of I.C.A.R. holds that the production of irrigated crops per acre is on an average 50 to 100 per cent higher than that of the unirrigated crops in the same locality.

In almost all parts of the country commercial crops have always monopolized irrigated zones. Thus jute is confined to the fertile Ganges-Brahmaputra delta and we are told that river inundation bringing down rich alluvial deposits enables the cultivator to plant this exhausting crop year after year without expenditure on manure.[13] Of sugarcane we learn that in Uttar Pradesh and Bihar the crop is entirely irrigated, elsewhere it depends for the most part upon the sufficiency and the timeliness of the monsoon rainfall.[14] It is but natural that where irrigation is available, commercial crops enjoy precedence at the cost of food-crops.

Besides making the land productive canals afford a

good means of transport and communication. No doubt railways can afford transport and communication but canals can do something more than this. They can ensure and enhance the productivity of soil by providing water supply which railways cannot do.

Financially considered, irrigation works are a great source of revenue to the Government of India. When the cultivable tracts of land are brought under plough the Government charges water rates, land revenue and other taxes on the commercial and industrial activities connected with them. Thus as Mrs. Knowles writes:

> "The irrigation works have made security of life, they have increased the yields and the value of the land and the revenue derived from it. They have lessened the cost of famine relief and have helped to civilize the whole region. *In addition they yield a handsome profit* to the Government of 7 to 8 per cent."[15]

"But the benefits of irrigation," in the words of Sir Bernard Darley, "cannot be measured only by Government receipts nor indeed by the area irrigated."

India has an ever-growing population which must be fed; the time is not far off when every available acre will be cultivated and still more land will be required to raise food for the multitude. The only remedy for this desperate situation will be to increase the yield from the land already under cultivation. Much has already been done in this direction with the help of canal irrigation. The cheaper classes of grain, more particularly millets and pulses, have given place to good rice and wheat, and the diet of the people has improved accordingly. The yields also have been increased enormously with the introduction of improved seed by the Agricultural Department. Much, however, remains to be done and it is safe to say that with better seed and more efficient cultivation the yield from crops in India can be increased by 30 to 50 per cent, according to the location of the land. As the pressure of population on land increases the value of these great irrigation works, constructed in the past, will become more and more apparent. In the mean time, they have banished the grim spectre of famine and brought peace, prosperity and a higher standard of living to the whole country.[16]

Defects of the Canal Irrigation

Irrigation water when misused spoils the soil beyond repair. Mr. Pugh traces back the history and remarks that soil civilization in the Middle East disappeared because of misuse of irrigation water. The Agricultural Reorganisation Committee of U.P. (1948) points out that at some places yield of crop decreases due to irrigation water. This is due to: (a) a greater demand on soil nutrients to produce higher yields, (b) the leaching effects of irrigation and (c) connection of injurious salts in the upper layers of the soil.

Canal irrigation, however, suffers from a very serious defect against which it is very necessary to guard effectively. An abundant supply of water from the canals for irrigation does not only lead to a great waste of water but also what is more serious it causes water-logging and salt-effervescence.

"Waterlogging may be defined," says Professor Brij Narain "as the rise in the level of the sub-soil water which renders land unfit for cultivation."

The approach of the danger is marked by certain well-known stages which have been very lucidly described by him thus:

(*i*) For one or two years *barani* crops are unusually successful, and there is a spontaneous growth of the rich crop *maina*.

(*ii*) In the third year patches of *kallar* begin to appear on the affected soils and the seed does not germinate on these patches.

(*iii*) The yield begins to diminish and the patches extend till they cover the whole field.

(*iv*) Depressions in close proximity to the canal remain permanently damp and have water of a rusty colour.

(*v*) An obnoxious odour is emitted by the abadies and the drinking water tastes raw.

(*vi*) The spring level rises and comes closer up to the surface of land.[17]

What happens actually is that the salts of the soil come up to the surface with the rise of the sub-soil water-level. The canal acts in two ways in causing this phenomenon. They intersect drainage lines and cause rain or flood water to be held up. Secondly, they cause their own waterfall vertically until it reaches the spring level.

> "If the sub-soil outflow is not enough to balance the inflow, the spring level rises being drawn up by capillary attraction and all the salts of the earth come to surface and make the land unfit for crops."[18]

This causes the soil to deteriorate by bringing out *alkali* or *reh* to the surface of the soil. In West Punjab it is reported that some 125,000 acres were thrown out of cultivation by the rise of subsoil water and a still larger area was rendered unsuitable for growing of crops by the appearance of salt-*kallar*. Similarly in the Nira valley of Bombay alkali lands have arisen from canal irrigation. It has been reported that 51,000 acres have been damaged in this way. The damage is enormous the area representing more than 25 per cent of the actual area of irrigation.[19]

The Agricultural Commission held that this wastage was not entirely due to the want of incentive on the part of the cultivator to economise water supplied by the Government, but to their uncertainty of water supply; and to ensure economy, they recommended that more investigation and experiments on the lines suggested by the Irrigation Commission should be undertaken, before it was decided to sell water by volume.

The remedies usually suggested for this phenomenon are: (*a*) Pumping out of water by tube-wells and other methods of drainage, (*b*) Proofing of canal beds by concrete, (*c*) Opening out of closed and obstructed drainage, (*d*) Replacing canal irrigation by well-irrigation, (*e*)Prevention of over-irrigation by forcing the cultivator to economise water, (*f*) Attempts should be made to change the time of supplying canal water, and the beds and sides of canals should be rendered impervious, *inter alia,* by treating them with sodium carbonate.[20]

Moreover, canal-irrigated areas have shown susceptibilities to encourage malaria with its very harmful and pernicious effect on the health of the peasants and the village folk. In order to safeguard against this danger the Royal Commission recommended that careful drainage surveys should be made in future in all irrigation projects and drainage maps should be prepared. Sir John Russel also emphasized the urgent need for proper soil surveys and agricultural analysis:

> "It may be laid down as an absolute rule that no irrigation scheme should ever be carried out until a proper soil survey of the region has been made. Barely one half of the water delivered at the head of the canal reaches the field."

The problem of transmission of water also deserves consideration. The site favourable for a reservoir of water may not suit as off-take for the alignment of a canal; the area under a canal may be such that a plentiful application of water may do it harm; or it may be that the conditions of soil or climate will give a greater value to water in irrigation lower down the valley. In the central table-land, however, there is usually no difficulty in utilising river-beds as a means of conveying water. Here rivers flow in the lowest parts of the valleys, and generally the beds are rocky without any subterranean passages through which water can be lost underground. We are, therefore, favourably placed in this matter of transmission, which has a very important bearing in the extensive use of water; the only loss may be said to be that of evaporation.

As a corollary to this, tracts should be commanded by means of canals not too long. Considerable lengths of canals mean loss of water and great increase in cost of delivery. Even in Northern India where there is the advantage of water being cheaply obtained, transmission through long canals tells heavily.

Even more important than these questions of storage and transmission of water, is the question of selection of lands that are worth irrigating. At present the Revenue Survey Records class as cultivable a large area of land which is so poor indeed that it cannot be irrigated with advantage; also there may be tracts of undulating lands where the slopes are stony and have but little soil on them. It is essential that the soil should be of a good order of fertility and we must have a detailed land classification to determine whether the land is worth the water to be applied to it. The water resources will ultimately limit the productive capacity, and should not be used so as to be out of balance with the lands proposed to be irrigated.

Besides these, it is also necessary to disseminate more knowledge on irrigational practices through demonstration and propaganda on subjects like (i) water requirements of different crops, (ii) proper time and frequency of water application, (iii) fertilizer application in conjunction with irrigation water, (iv) economic use of irrigation water and (v) post-irrigation operations and moisture conservation practices.

Irrigation Policy of the Governments

Irrigation in India had been practised from very early times. This fact is proved by the existence of old wells and tanks in various parts of the country, *e.g.,* in the Chingleput district of Madras two tanks which still irrigate a fairly large area are referred to in the writings of the eighth and ninth centuries.[21] Whatever irrigation works were there were generally constructed on a small scale which were not very conducive to the economic development of the society; larger works as such were unknown. Canals also were constructed by the past rulers, *e.g.,* the Western Jamuna Canal dated from the 14th century and the Eastern Jamuna Canal was constructed by the Mughals. The Cauvery Delta system in Madras dated from the second century A.D. All these were inundation canals, which were constructed by employment of forced labour. They were fed by the rainfall. But the fall of the Mughal Empire in the 18th Century prevented the maintenance and repair of canals by forced labour. According to Dr. Anstey:

> "The lack of capital and the engineering skill, in security of tenure and the consequent unwillingness to sink capital in fixed improvements and ever recurring invasions and internal political dissensions, seriously checked the extension of irrigation."[22]

During the 18th century therefore, the Jamuna canals fell into decay. These were destroyed and in many places covered with jungle.

I. East India Company's Role in the Development of Irrigation: Improvement of Old Works

The E. I. Co. first of all devoted its attention to the revival and improvement of old irrigation works. It spent large sums of money partly in repairing the ancient irrigation works and partly in undertaking new construction works. The most important works that were remodelled were:

(1) The *Western Jamuna Canal* was improved in 1821. The famine of 1832-33 further led to the

extension in this canal. But the construction work was done in a hurry and it therefore led to water-logging. According to Bernard Darley, "Due to faulty alignments and hasty construction, much of the country became water-logged and most unhealthy."[23] Therefore, in 1873, the canal was remodelled as a whole so that drains were dug, channels were re-aligned on watersheds and the country was reclaimed.

(2) The *Eastern Jamuna Canal* was improved in 1830. Due to faulty construction it had to be remodelled; and

(3) The *Grand Anicut* across the river Cauvery was remodelled by Sir Arthur Cotton in 1836. He built the upper Anicut, consisting of simple bar of masonry, 2,562 ft. long, and 5 to 7½ ft. high resting on the wells with an apron in the rear.[24] There were twenty-two small sluices in the weir to permit free passage to sand and water not required for irrigation. During 1843-44, the sluice ways were increased and the masonry dam, known as Cauvery Dam, was built. The entire system of weirs was remodelled during 1899-1902.

Construction of New Works

The East India Company also started construction works of the following new schemes:

(1) The success achieved in the reconstruction of these old canals encouraged the engineers to undertake new weirs in several provinces with a view to ward off the famine conditions. This led to the construction of the upper *Ganges Canal* by Sir Proby Cantley in 1840, which was completed in 1854. This canal has turned one of the famine-ridden tracts into one of the richest in India.

(2) Another great work begun by the company was the construction of the *Upper Bari Doab Canal* which replaced the Hasli Canal in 1849 and was completed in 1859.

(3) Another important work was the construction of the great *Godavari Canal* under the direction of Sir Arthur Cotton in 1846. "On the left flank of the river was the head regulation of the Eastern Delta system, with a navigation lock and connected under-sluices. Two weirs (the Dowlaishwaram weir 4,940 ft. long and the Ralli weir 2,859 ft. long) spanned the Gautami-Godavari. The Godavari was also crossed by two weirs (the Maddur Weir 1,548 ft. long and Viziswaran Weir 2,598 ft. long). The head works thus comprised of 11,945 ft. or 2¼ miles of weir, three canal bears, with navigation locks and three sets of under-sluices."[25] Though it was a great achievement, yet the construction was defective due to poor materials and apparatus. Hence by 1890, two of the canal heads and three head locks had been rebuilt on improved designs. The irrigation facilities provided by the works have transformed the rural economy of the Godavari Delta. Famines are now largely unknown in this area, which was most liable to famines before.

(4) The construction of *Kistna Delta Project* was undertaken in 1852 and completed in 1855. In addition a large number of small works were constructed and repaired. The Company also improved many inundation works in the Punjab and Sind after 1851. The most important works developed were the Begari Canal and the Fuleli Canal.

Thus before the era of the railways, the East India Company took in hand some important works. This was due not only to the desire to fight the ghastly famines but also to the fact that the period under review also witnessed an era of canals in England between 1780 and 1830. However, the English canals were meant for navigation while the Indian canals were primarily designed for irrigation.

II. Canal Construction by Private Companies

The success of these canals encouraged private companies to undertake the construction of canals, though they proved to be failures. The above schemes were constructed out of revenue and therefore, imposed a heavy strain on the Company's finance. The Court of Directors in 1857 proposed that the construction of irrigation works should be undertaken by persons as private enterprise. Sir Arthur Cotton outlined several ambitious irrigation schemes. He proposed the construction of a number of canals radiating east and west from the Tungabhadra and the Kistna. According to this project, four weirs were to be constructed on the Tungabhadra and on the Kistna. These weirs were to be supplied by the excavation of five large canals. Further, 600 miles of river channels were to be improved to provide navigation facilities and a coast canal constructed to link the Kistna Delta with Madras. Another 600 miles were to be constructed in the west, stretching up to Poona and Mangalore. This project was to cost about £2 millions. Another scheme was outlined to irrigate and navigate the area from Santhal Hills to Dacca; and this was to be connected with the Ganges Canal at Kanpur by means of an artificial canal about 550 miles long. Still another 200-mile canal was to join Ganges Canal with the Sutlej river, to provide navigation facilities between Bengal, the Punjab and the U. P. The Orissa Canal was expected to extend the navigable line—about 4,000 miles long from Karachi to Calcutta and Madras.

Two companies were floated to take up the scheme. The East India Irrigation and Canal Company was formed in 1858 which commenced work in 1863. This company was to construct Orissa and Midnapur Canals, but by 1866 it had spent all its

capital, even though a large part of the construction work was still untouched, and failed to obtain additional capital. The Government, therefore, took over the work paying £900,000. These works have proved invaluable to the agricultural population they serve, besides offering very useful navigation facilities. But financially these works have never been a success owing to the fact that the average rainfall over the tract is 60 inches per annum, a fact that was entirely ignored when the project was framed.[26] The East India Company had also undertaken to construct the same canals but owing to shortage of capital, they were constructed by the Government from the very outset, though on a smaller scale than originally planned.

Another company, the Madras Irrigation Company, was formed in 1862 with a capital of £1 million. This Company undertook to construct the Kurnool-Cuddapha Canal, at an estimated cost of £550,000 but after the construction work was undertaken the Company spent the whole of the capital it possessed and had, therefore, to borrow £600,000 from the Secretary of State to complete the work. Later on the Government purchased this company for £1,185,500. The main causes of the failure of these schemes were the desire of the companies to secure immediate profits and the lack of experience and knowledge of local conditions.

III. Construction by the Government through Loans

In view of the appalling loss of life caused by the famine of 1866, the Government of India realised the necessity for the rapid construction of a network of irrigation canals. The Secretary of State for India, therefore, accepted the principle of financing productive works by loans raised in the open market. This new policy led to the construction of five important irrigation works in U.P., Bombay, N.-W. F. P.[27] and the Punjab.[27] These canals were: (1) the Sirhind Canal in the East Punjab, (2) the Lower Ganges Canal in U.P., (3) the Lower Swat Canal in N.-W. F. P.,[27] (4) the Desert Canal in Sind[27] and (5) the Mutha Canal in Bombay. This work is one of great value, far more so than the direct returns from it indicate. The necessity of affording a supply of good water to Poona would alone have been sufficient justification for the project and, added to this, a tract extremely liable to famine is efficiently protected. Although classed as unremunerative, the project has proved a thoroughly sound investment on the part of the Government.*

IV. Protective Canals Elsewhere and Colonization Canals in the Punjab

In the meantime the Government had begun to realise their responsibility for famine relief. It was after the publication of the Report of the Famine Commission of 1880 that remarkable development took place in the protective irrigation works which were most liable to famine. Since 1818, the Government began to set apart a sum of Rs. 1½ crores each year for the Famine Relief and Insurance Fund, out of which a sum of Rs. 75 lakhs was to be spent on the protective railways and irrigation works. The first protective work undertaken was the *Betwa Canal* in the U. P.; and the *Rushikalya Project* consisting of reservoirs, weirs and canals, and the *Nira Canal* in the Bombay Presidency and the Periyar canal system in Madras were constructed. Two important works in Sind were the *Jamrao Canal* (lying between Eastern Nara and the Indus) and the *Western Nara Canals*.[28]

In addition to these famine protective works, construction of colonization canals took place in the Punjab. This scheme has turned a barren, waterless and uninhabited desert into a garden inhabited by a contented peasantry with flourishing agriculture. The area lying between the rivers Jhelum and Sutlej was having rainfall from 5 to 15 inches and was inhabited by a few graziers and herders. In order to open up some of these waste tracts and at the same time to relieve pressure on land in highly populated region elsewhere, Government took over these unreclaimed lands as 'crown waste' and embarked on a scheme of colonization.[29] But the preliminary survey was carried on under great difficulties. In the desert of the Punjab, the temperature was often continuously over 110 deg. with no shade and only ugly brackish water to drink. Work carried out in malarial jungles was worse inasmuch as the constant illness of the staff and the labourers made progress much difficult. Moreover, the frontier working party had to be guarded by soldiers. Not only was the inadequate supply of labour a constant obstacle especially in the waste-lands of provinces like the Punjab and Sind but the difficulty of getting fuel to make bricks and lime also hindered construction. Finance also imposed its all-important limitations.

The first colony canals were the *Sohag*, taken out from the Sutlej, and the *Sidhnai Canal* in the Multan district. The former was later absorbed into the Sutlej Valley canals. These canals yielded 40 per cent on the capital outlay. They promoted the growth of prosperous colonies in West Punjab and encouraged the Government to embark on a more ambitious canal project, the *Lower Chenab Canal*.* The land between the Jhelum and the Sutlej was divided into squares of land subsequently standardised at 25 acres each and on these were settled members of the various agricultural tribes from the old districts. *The Chenab Colony* was

established in 1892, the *Jhelum Colony* in 1901 and *Jamrao Colony* in 1898 in Sind.

V. Irrigation Commission and After

The appointment of the Irrigation Commission was the result of the famines of 1899-1900-1901 and the success of the productive and protective works undertaken during the second half of the 19th century. The Commission reported in 1903 and laid down a definite policy regarding. the "selection, financing, and maintenance of canal works." As regards the productive work, the Commission held:

> "All productive work must be regarded as essentially protective. The direct revenue which they earn is a valuable asset, more especially as it is usually at a maximum in years of drought when so many other sources of revenue are liable to contract. As already shown, it is a measure of the increase in the wealth of the country due to the works, a large share of which comes back to the State indirectly. Population is attracted from the more congested district, and in times of famine, many emigrants from distressed tracts find agricultural employment on the new areas brought under cultivation. Every extension of irrigation increased the security of the food supply of the country in years of drought, and, in these days of cheap railway freights, the produce of irrigation can be carried to those parts in which it is most required. For these reasons, we think that programmes of future expenditure on irrigation works should provide for the construction of as many productive works as can be proposed, in whatever parts of the country they are situated, and without reference to the urgency of protection for the locality. Promising projects should be held in abeyance only when funds cannot be allotted for them without interrupting progress on irrigation works of any kind which have been actually commenced, or withholding money from works more urgently required for protective reasons; or when adequate establishment is not available for carrying out the works; or when the success of the works depends upon colonisation operation which it may be more convenient on general grounds to postpone."[30]

The recommendations of the Commission gave invaluable encouragement to the development of irrigation works in India and the total capital expenditure on productive and protective works was doubled. A large number of new works were undertaken.

The first important work to be undertaken was the great Triple Canal Project in the Punjab, consisting of the *Upper Jhelum Canal* (built in 1915), the *Upper Chenab Canal* (completed in 1912), and *Lower Bari Doab Canal* (opened in 1913). The entire system was completed in 1917.[31] During this period the *Lower Jhelum Canal* was also constructed in the Punjab; and the *Upper Swat Canal* in N.-W. F. P. The Famine Commission had no intention of restricting the growth of irrigation facilities in India. They wanted future development to proceed on efficient and economic lines. They said:[32]

> "It must not, however, be supposed that we estimate the probable net cost of protecting any tract, which is now liable to famine, at a sum which is equivalent to three times the probable expenditure on famine relief. There are no doubt many tracts in which protection cannot be provided at a less cost than this, and they are generally the tracts in which protection is most urgently required. But there are others in which it may be hoped that the unproductive outlay will be much less. Works which will be productive, or in which the capital cost is not likely to exceed 20 times the net revenue, will not involve any unproductive outlay, and it will be unnecessary to consider the questions of their protective value at all. And we think that, in all tracts in which the cultivation is at all insecure, protective works may be sanctioned without hesitation whenever the capital cost is not likely to exceed thirty times the net revenue, or whenever a net return of more than 3 per cent on the capital outlay may be anticipated. The indirect returns which will accrue on the expenditure, and the protective value of the work will certainly suffice to justify the sanction. When a lower return than this is anticipated, it will be necessary to pay closer attention to all the circumstances of the case; and especially to the urgency and the certainty of the protection which the work is designed to afford. In such cases the work will either be abnormally costly to construct or maintain, or the value of irrigation, except in years of extreme drought, will be so small or doubtful as to justify caution in according sanction. This examination of the subject leads to the conclusion that, however great may be the indirect value of irrigation works which may be classed as productive, it will diminish rapidly for works on which the direct returns are likely to fall below the productive standard, and may become so inappreciable, even in districts which are liable to frequent famines, as to render the construction of works inexpedient."

The suggestions of the Commission have found the basis of the irrigation policy of the present century. The first important productive work undertaken during this period was the *Tribeni Canal* in Bihar. Other protective works undertaken in the C. P. were Mahanadi, Waingana, Tondula and Ramtek canals. Similarly, in Bombay, a large number of storage works were constructed of which the *Pravara and Nira Right Bank Canals* were important.

VI. Development During Post-War Period

After the inauguration of the Reforms of 1919, irrigatoin became a provincial subject. The Provincial Government now possesses much larger initiative in the construction of canals. They have to obtain the sanction of the Government of India only if the estimated cost is more than Rs. 50 lakhs. Loans can be taken not only for productive works but also for other works. Money can also be utilized from the Provincial Famine Insurance Grant when it is not re-

30. *Report of the Indian Irrigation Commission*, para 114.

31. These systems now have gone to Pakistan. The 'Triple canal system' consists of 433 miles of main canal and branches and 301 miles of distributories. The total cost of the schemo was about 11 million pounds. The total area commanded by it is about 4 million acres. It irrigates nearly 2 million acres.

32. Vide Report, para 111.

Digitized by Arya Samaj Foundation Chennai and eGangotri

quired for famine relief. Due to the post-war prosperity many new irrigation schemes were launched, several of which have been completed. Of these the most important was the *Sutlej Valley Project* in the Punjab and the states of Bahawalpur and Bikaner, by making four weirs for irrigating over 5 million acres or nearly 8,000 sq. miles of land at a cost of Rs. 21 crores and was completed in 1932-33.[33] Another work of great magnitude was the construction of *Sukkar Barrage* project in Sind at a cost of Rs. 24 crores to command a gross area of 7½ million acres.[33] Besides these, *Sarada Canal* was built in 1928 in U.P., and the *Cauvery Mettur Project* in Madras and *Damodar Canal* in Bengal were also constructed.

Irrigation Research in India

Great strides in irrigation (including hydraulic research) have been made in India within the last 35 years. Some of the activities have been *ad hoc* and inspired by the personal interests and scientific ambitions of individual engineers; but substantial advance has been made through organised research.

The first in the field was Bombay where special Research Division was created in 1916 to investigate local problems on land drainage and reclamation. In 1920 a hydrodynamic research station was opened on a small distributary near Poona. By 1925 the activities of the Research Station developed beyond belief and the water supply available for model work was found to be inadequate. The station was consequently moved to Khandakvasla below the Khandakvasla Dam where conditions for research were excellent. After 1945 the activities of the Central Research Station at Khandakvasla multiplied and problems were referred to it from all parts of the country. During the 33 years of its existence over 1,500 experiments have been carried out that relate to river training, the design of channels and hydraulic works, navigation, soil and agricultural problems.

The Hydrodynamics Research Station of Khandakvasla was taken over by the Government of India in 1937, to assist river training, research problems and irrigation and was renamed as the Central Water Power Irrigation and Navigation Research Station early in 1948. In order to meet the increased demand for research facilities from the Central, Provincial and State Governments, the Station is now under expansion.

After Bombay came Punjab, where the danger of water-logging and deterioration of land by salts became alarming. Investigations were started in 1925 and gradually a hydraulic laboratory came into being at Lahore. This had since developed into one of the finest research institutions in the world but was lost to India by partition in 1947. A new Research Institute was set up with head-quarters at Amritsar.

33. Both these projects now lie in Pakistan.

The Irrigation Research Station in U.P. was established in 1930 at Lucknow but has since moved to Roorkee. Investigations have been carried out on calibration of flumes and falls, the study of non-silting distributary heads, fluming of structures, water requirements of crops, earth dam construction, river training and sub-soil supplies available in different doabs in the western districts of U.P.

The River Research Institute of West Bengal was set up in 1943 and comprises the River Model Station at Galsi, Tidal Model Station at Belgharia, the Soil Mechanics Laboratory at Russa and the Statistical Laboratory at Anderson House, Alipore (Calcutta).

The Krishnarajasagar Research Station at Mysore was established in 1945 immediately below the Krishnarajasagar Dam on the river Cauvery. The Hyderabad Engineering Research Departments, the Irrigation Research Station, Poondi, Madras State, the Soil Engineering Research Station, Chepauk (Madras), the Concrete Laboratory, Chepauk, and the Hirakud Research Station (Orissa) have all been established in the course of the last decade.

Irrigation Organisations

Besides the Irrigation Departments of various Provinces and States, there are three central bodies dealing with irrigation matters, *viz.*, the Central Waterpower, Irrigation and Navigation Commission, the Central Board of Irrigation and the Central Groundwater Organisation.

The Central Waterpower, Irrigation and Navigation Commission (CWINC) was set up by the Government of India in 1945, with the object of initiating, co-ordinating, and furthering the schemes for the control, conservation and utilization of water resources throughout the country for the purpose of irrigation, waterpower generation, navigation and flood control, and if so required, the construction of new schemes. The Commission consists of a chairman, two full-time members, and technical administrative staff to perform these functions.

The General Board of Irrigation (GBI) was set up in 1931 to co-ordinate research on irrigation and allied subjects conducted at all research irrigation stations in India. The Board maintains one of the finest libraries on irrigation, hydro-electric and other subjects where enquiries from engineers in India and abroad are dealt with.

The Central Groundwater Organisation (CGO) was established in 1946 in conjunction with the drive for "Grow More Food Campaign" and its objectives include (*a*) assisting provinces and states in securing materials for execution of tube-well projects and training their personnel in the use of equipment, (*b*) assisting in the construction of tube-wells, and (*c*) collecting and co-ordinating information available about sub-soil supplies and carrying out research in developing improved methods of exploiting groundwater supplies.

PARTY, GOVERNMENT AND STATE

Digitized by Arya Samaj Foundation Chennai and eGangotri

By Dr. A. K. GHOSAL, M.A., Ph.D.

The recent crisis in the Congress culminating in the resignation of Pandit Nehru and eventually patched up by the offering of the stewardship of the Congress organisation to the Prime Minister raises some important issues giving food for some general reflections regarding the position of political parties in relation to the State and Government under parliamentary democracy which are set forth in this paper. We are not concerned here with the rights or wrongs of the dispute that offers the occasion for these reflections. Our approach in this study will be simply analytical and academic and although made in the context of the peculiar situation of this country, our observations will necessarily have a wider and general application.

The dispute that arose between the Congress President and the Prime Minister is not a personal one, but is to be traced to the lack of appreciation of the changed position of the Congress before and after the transfer of power which calls for a clear determination of the relationship between the parliamentary wing of the party and its organisation outside. Pandit Nehru himself made a passing reference to this at a Press Conference on August 28 last when he is reported to have observed:

> "The position of the Congress President and the Congress Executive today could not be said to be the same as before."

Before the transfer of power the Congress was not just one of the political parties in the usual acceptation of the term, but claimed, with no little justification, to represent the entire nation, as it was the rallying point of all forces of national resistance to imperialistic domination and the spearhead of the struggle for national emancipation. So long as the Congress was engaged in the fight for freedom it had to be regimented in the pattern of a disciplined army and all its members had to submit to the stern discipline of the organisation which headed up to its highest Executive—the President and the Working Committee popularly designated in the language of military technique as the High Command. But with the transfer of power came about a transformation in the character of the Congress also from a fighting organisation of the nation to a ruling party in power and as the pattern of government of the country even before independence had become assimilated to that of a parliamentary democracy the position of the Congress *vis-a-vis* its parliamentary wing and the Government formed out of the latter required a new adjustment on the lines obtaining in countries like England where parliamentary democracy prevails. In the new posture of things the Congress should no longer claim to represent the nation as a whole, which would logically lead to totalitarianism and theory of one-party state in direct contravention of the democratic ideal to which the Congress stands committed, for such a claim would be the very antithesis of the basic assupmtion of parliamentary democracy, *viz.*, alternation in office and opposition between rival political parties according to the choice of the sovereign people. Nor should the party outside the Parliament control its members in Parliament and the Government in minute details, because the postulate of parliametary democratic government is the control of the executive by, and its full responsibility to, Parliament, and that responsibility does not cease to exist even if it be obscured by meticulous interference of an extraparliamentary authority. That does not mean that after election the members returned on the party ticket would become completely independent of the party, because they are pledged to implement the broad policies accepted by the party organisation outside Parliament and formulated in the programme placed before the electorate on the eve of election and because both have the same background.

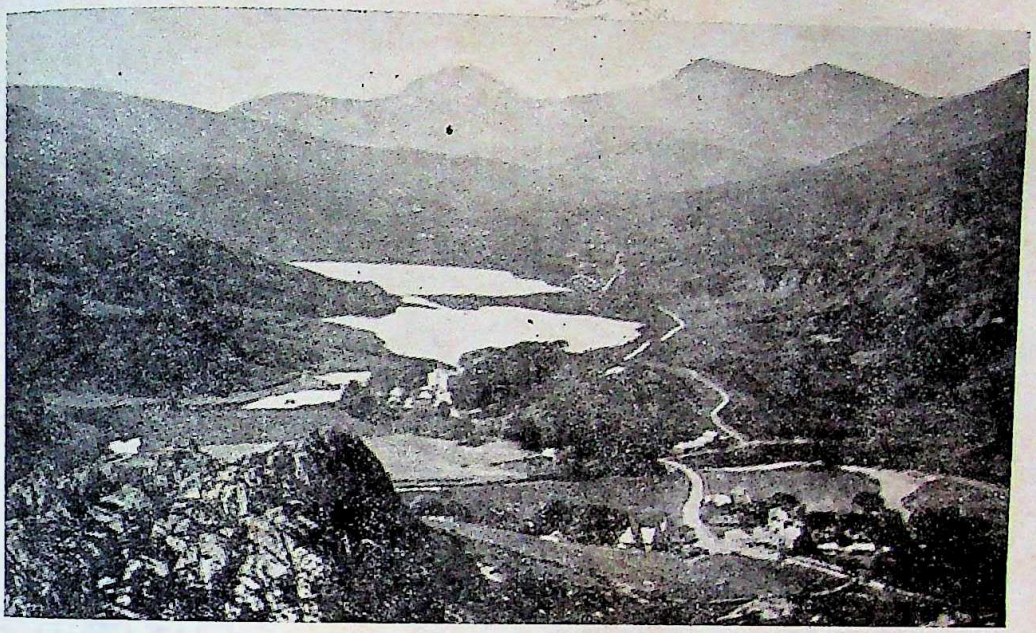
But the point that is to be noted is that the system of parliamentary government requires that short of this agreement on broad policies the Parliamentary wing of the party and the Government should be released from all day-to-day interference in the conduct of government, because as a government it represents not simply the party or the parliamentary majority but the State—a neutral force and it has to so conduct the administration, sometimes even by series of compromises, as to make itself the mouthpiece of the whole people consisting of both the majority party and the minority parties for the time being at any rate. It cannot do that if it is ramshackled by directives of the party executive at every step. Of course occasions may arise when exigencies of parliamentary politics may lay too great a strain on their allegiance to the party and when it becomes their duty to resign and go to the electorate for a fresh mandate. Parliamentary system rests on a nice balancing of forces and any maladjustment in the balance requires correction by appeal to the electorate or sovereign people, and political sagacity and statesmanship lies in the power of discerning when exactly that occasion arises. So far as the recent crisis in the Congress is concerned, it arose because the situation was confused by the Congress stepping straight into office and power without a fresh general election and the position will be much more clarified after ensuing general election if the Congress comes into power after contest with other political parties. As Pandit Nehru is reported to have observed in course of his statement at the Press Conference referred to above:

> "Next year a wider Parliament will be elected by millions of people and it is rather difficult to

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

think that it can be controlled by a party executive. The party executive lays down for its own party broad policy and the party should follow it. Now, in regard to this matter, if I belong to a party, obviously I must follow the broad policy which that party lays down. Suppose, the Congress Executive gives a mandate to me and says—Do this or that, that is an important matter and I should accept it. If I think I cannot accept that I must say I cannot accept. If in spite of that they say you must accept it, then I get out. If the Congress Executive asks me to resgin from the Prime Ministership I resign immediately. But I do not think the Congress Executive should interfere in my work apart from the big policy that should be laid down either in Parliament or administrative work or as to who should be members of my cabinet."



Thus it would appear that the crisis in the Congress was caused by its traditional outlook, its totalitarian claim to represent the nation as a whole and its failure to adjust itself to the new situation brought about by the transfer of power. If the Congress is to remain true to the profession of its democratic ideal and for the matter of that of a parliamentary type of democracy it has got now to eschew its traditional totalitarian claim and play the role of just one of the political parties in the country with its own programme many of whose features would of course be a legacy of its past tradition, but touched up so as to suit the new environment, otherwise there is every likelihood of a party dictatorship developing behind the facade of parliamentary democracy. We have before our eyes many examples of such development in recent history to put us on our guard. The best way to guard against such sinister development is to draw a clear-cut line between the political wing of the party and the parliamentary wing—the sphere of the former being to work among the people and the electorate outside the machinery of the State represented by parliament and Government to win over the electorate to place itself in the seat of power to implement its policies and programme which may have appealed to their imagination, while the sphere of the latter is to work inside the Parliament either in the role of the Opposition to act as a check on the excesses of the Government by healthy and responsible criticism or in the role of the Government for the whole nation instead of for the party only, according as it happens to be in a minority or majority in Parliament. Except in respect of the general outlook and broad policies the parliamentary wing of the party is not to be subjected to meticulous interference by its organisation outside and is to be given a measure of autonomy to carry on its functions inside the machinery of government if it is not to be handicapped in the proper performance of its role. It would perhaps be no exaggeration to say that parliamentary form of democracy can only succeed on the basis of jealous vigilance against control of the government in the political wing of the party outside Parliament. Because parliamentary democracy rests on the principle of complete dependence on and responsibility to Parliament of the Government to the exclusion of any extra parliamentary authority and even the control of the parliamentary majority by a party caucus outside Parliament is repugnant to the spirit of parliamentary democracy, whatever may be the position in fact. If democracy professes to rest on the doctrine of the sovereignty of the people there can be no room for any other authority to stand between the people or the electorate on the one hand and Parliament and Government on the other. The function of political parties is to help the electorate in giving shape and form to their collective will, in mobilising their scattered energies and canalising them in useful channels, in fact they are the instruments for achieving the ends of democracy, but still they should not be allowed to usurp the sovereignty of the people. If a political party through control over its parliamentary majority and the government is allowed to control the machinery of State, it will be placed in a position of definite advantage over all others and would be placed on the high road to party dictatorship. Even if the party does not take advantage of its position, it would still be open to suspicion of such practice in the eyes of others much to the detriment of clean public life.

It is desireable, therefore, that there should be organisational separation between the political party outside and the parliamentary party inside Parliament. It is from this angle that the recent combination of the leadership of the Congress both inside and outside Parliament by Pandit Nehru has come in for legitimate criticism in some quarters, as it would tend to confuse the line of separation between the Congress organisation outside and the parliamentary Congress party and the Government and tilt the scale heavily in favour of the Congress party in the country as against other parties by the added weight of the head of the Government to the leadership of the Congress party. Just as no individual in a democratic state should be in a position to say, "I am the state," so also with any party. Even Pandit Nehru himself is not unaware of these implications of the step. At the Press Conference referred to above he deprecated such combination of the two offices except as an emergency measure. He is reported to have said:

"I definitely think that it is a wrong thing practically, and even otherwise, for the Prime Minister to be Congress President. But that being the general rule. I cannot say what necessity might compel one to do under special circumstances, when a hiatus is created or something like that. . . . I do not think it can work as a permanent proposal. It can only mean suppression of one function, practically speaking. Either the Prime Ministership becomes dominant or the other. Both cannot. So, as a practical proposal, I do not think it is feasible. That may occur during a crisis for a temporary period, but it should be avoided as far as possible

unless circumstances are such that one does a thing which is not normally desireable."

To sum up, the underlying reason and desirability of the proposed separation (in the limited sense indicated above) between the party outside Parliament on the one hand and the party members in Parliament and Government on the other lies in the fact that for the time being the latter becomes the mouthpiece and agent of the State which is a neutral force and as such should not function in a purely partisan spirit. In the words of Prof. Laski: "The whole underlying conception of parliamentary government is based upon the view that the State is a neutral factor in Society. In the ceaseless interplay of party warfare now one party, now another, becomes the Government and so becomes entitled to the operation of its authority."*

* Laski : *Parliamentary Government in England*, p. 181.

LIAQUAT ALI KHAN

A Brief Life-Sketch

By Dr. M. HAFIZ SYED, M.A., PH.D. D.LITT., T.D.
University of Allahabad

Mr. Liaquat Ali Khan was born at Karnal in the East Punjab on October 1, 1895. He was the second son of the late Ruknuddaullah Shamsher Jang Nawab Rustam Ali Khan. He claims descent from the illustrious King Nausherwan the Just of Iran. He was married to Begum Raana, a distinguished economist, educationist and social worker.

After education at home Mr. Liaquat Ali Khan went to Aligarh for further studies. He was also a student of the Allahabad University in 1919. He took his M. A. degree from Exeter College, Oxford. He was called to the Bar from Inner Temple, London, in 1922.

Mr. Khan joined the Muslim League in 1933 and was elected its General Secretary, in 1936. He held that office till 1947. He was elected a member of the U.P. Legislative Council in 1926 and continued in this position till 1940. He became the Deputy President of the U.P. Legislative Council in 1931 and continued in that capacity till 1938. He was elected to the Central Assembly in 1940.

He was a member of the Executive Council of the Agra and Aligarh Muslim Universities for a number of years. He was the President of the Anglo-Arabic College Society in Delhi from 1940 to 1947.

Working in close collaboration with the Late Mr. M. A. Jinnah he made the Muslim League the most powerful organisation of the Muslims. He was elected deputy leader of the Muslim League Party in the Central Assembly in March 1943. He was a good parliamentarian and debater. He was the Chairman of the Central Parliamentary Board of the Muslim League.

Mr. Liaquat Ali Khan was mainly responsible for the great victory of the Muslim League in the general election in 1945. He was invited to the Simla Conference in 1945 and 1946.

He was appointed a member of the Viceroy's Executive Council in 1946 and leader of the Muslim League bloc in the Interim Government. He was the first Indian Finance member to present a budget of 1947-48. He went to England along with Mr. Jinnah to represent Muslim India in December 1946, when it was decided to divide India into India and Pakistan.

As the right-hand man of Mr. Jinnah he became the first Prime Minister of Pakistan in 1947. He also held the portfolios of Defence, and States and Frontier regions. He was the convener of the Pakistan Muslim League and elected its President in October 1950.

The news of Mr. Liaquat Ali Khan's assassination has cast a gloom all over India and Pakistan and it shocked not only his admirers and fellow-citizens but also those who had political differences with him. Our beloved Prime Minister mourned the loss in an affectionate manner and said that he always received unfailing courtesy and kindness at his hands. Mr. Liaquat Ali Khan was one of those few leaders of Pakistan who had full faith in mutual co-operation and goodwill and treated differences of opinion with generous toleration.

Mr. Liaquat Ali Khan was born and bred in India. He was educated in the M.A.O. College, Aligarh, and the Allahabad University. He counted among his friends some eminent Indians, one of whom was Mr. C. Y. Chintamani, the first editor of the *Leader* who had high regard for his liberal views. Politically he had leanings towards Congress ideals. It was he who drafted the famous Independence Resolution which was passed by the All-India Muslim League in 1937, the actual wordings of which were these:

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Resolved that the object of the All-India Muslim League shall be the establishment in India of full independence in the form of a federation of free democratic state in which the rights and interests of the Musalmans and other minorities are adequately and effectively safeguarded in the constitution."

In spite of this clear declaration of his political conviction in unity and solidarity of one Indian nation he did subscribe later on to the view of the fantastic notion of the two-nation theory in India due to the necessity of political exigencies as adumbrated by the Muslim League. Whatever may have been his political views under the compelling influence of Muslim League politics, Mr. Liaquat Ali Khan sincerely believed in the establishment of cordial relation between India and Pakistan. The Nehru-Liaquat Agreement of April 1950 is an obvious evidence of this fact. To quote his own words:

"It will inaugurate a new era in which we shall be able to settle mutually our common disputes which have resulted in growing dissensions between the two countries."

It is a matter of regret and disappointment that the agreement has not worked well. Dissensions between two countries have not yet ceased. Mr. Liaquat Ali Khan is not wholly to be blamed for the failure of this agreement. It is admitted on all hands that Prime Ministers cannot both frame and execute policies. The execution of policies is the task of officials. No agreement can possibly work efficiently if officials do not co-operate with the Government. We are reminded of the words of Mr. Ghulam Mohammad. Once he said, "Agreement between India and Pakistan has not been implemented because there had been high level agreements; officials at low level have taken the law into their hands and had infringed the agreements." It is not only the officials but also the people of Pakistan who more often than not, took the law into their own hands and infringed agreements reached between India and Pakistan. They lack political insight. They are not sufficently tolerant. They were wrongly led to believe that the Hindu population of their country was *Kafir*.

Mr. Liaquat Ali Khan has full faith in mutual toleration. If all Pakistanis appreciated his noble attitude, there would have been no exodus on a large scale of Hindus from Pakistan and possibly no danger of war between the two dominions. Pakistan has had the misfortune of losing its popular Prime Minister at a time when she needed him most.

Mr. Liaquat Ali Khan rightly believed that all disputes whether domestic or international should be solved by peaceful methods. Let us remember that Mr. Liaquat Ali Khan will have lost his life in vain if Pakistanis continue to preach what is called veiled violence.

He had a remarkable role to play in his own way, and he established his claim to eminence by playing it to the satisfaction of his chief the late Mr. M. A. Jinnah. As a finance minister in the Interim Government of Lord Wavell he produced a much-discussed budget. As a general Secretary of the Muslim League for many years he proved his skill as an organiser. It was in recognition of his valuable services that Mr. Jinnah elevated him to a high position, *viz.*, the premiership of his new dominion. If Pakistan has attained a certain amount of stability and progress in the course of four momentous years, the credit goes to her premier. It will be sometime before we shall be in a position to take stock of his contribution to the creation and consolidation of Pakistan. The future historians alone will be in a position to adjudge his achievements and failures as one of its builders and administrators. Let us bear in mind the simple fact that if Pakistan is to survive, she must tread in the footstep of Mr. Liaquat Ali Khan and try to produce at this hour of her national calamity leaders and officials who by their firmness and moderation can wean the people from the path of hatred, violence and war and unite them all for the constructive work of peace.

EVE OF THE GENERAL ELECTIONS

By C. L. R. SASTRI

"I never wonder to see men wicked, but I often wonder not to see them ashamed."—Swift

I am writing this article on the eve of the general elections. Our people, to put it succinctly, should be exhorted by every responsible writer to exercise their franchise not wildly but wisely. They exercised it wildly during the last elections. That tragic mistake must, on no account, be allowed to be repeated. Circumstances have not been so favourable to us since then that we can afford to continue committing such Gargantuan blunders till the last syllable of recorded time. It is, perhaps, a counsel of perfection to expect any electorate—composed both of the ordinary run of men and of those whom Stevenson happily called "the more cultivated among the ignorant"—not to be led astray by the calculated wiles of the parties contesting the elections. These wiles are designed to catch them on the wrong foot. As far as *our* electorate was concerned it *had been* caught on the wrong foot in 1946. Our *soi disant* premier political organisation, the Congress, dangled the enticing carrot of "No creation of Pakistan save and except over our dead bodies" before the noses of the gullible public, and the gullible public duly succumbed to that blandishment. The Congress leaders were taken at their face-value. It must have caused them no end of merriment to witness how easily they could bamboozle the people. It was almost as though they could play on the people as on a stringed instrument.

The Embrace of Death

Was it not Barnum who put us wise to the supreme fact of life that a sucker is born every minute? I am certain that, during elections, a sucker is born every second; and that, in our hapless country, a sucker is born every *split* second. The result was that, as they had confidently anticipated, the Congress won the elections by a very comfortable majority, indeed. Their ruse succeeded beyond their wildest dreams. The electorate, in a manner of speaking, ate out of their hands. The poet has a line, "Ignorant of their doom the little victims played": I may say, likewise, that ignorant of their doom the electorate tripped over one another's heels to embrace our Congress leaders. It did not know, at the time, that it was an embrace of death: I am not sure it knows it now. That is why I am writing this article. I am afraid that it is still, after so many heart-rending disasters, under the old spell—even if it be conceded that the first fine careless rapture has departed beyond recall. A concatenation of circumstances has woven a halo around the Congress's head that can, with difficulty, be destroyed. The Congress is a name to conjure with: "there is magic in the web of it." It was the Congress that persistently led the freedom-movement in the country.

The Liberals

It is, of course, conveniently forgotten that, for well-nigh thirty-five years, the Congress had been in the hands of the much-maligned Moderates, later christened Liberals. It was these same Moderates, or Liberals, that had been responsible for instilling in us the craving for freeing ourselves from alien domination. It was Dadabhai Naoroji and Gopala Krishna Gokhale who made us politically-conscious in the days when the later darlings of the multitude were hardly heard of in the next street, not to speak of China, as Hazlitt puts it somewhere. It is their names, more than those of any others that will be inscribed, in letters of gold, on the roster of our freedom-struggle. It was only after 1920 that it fell to the lot of Mahatma Gandhi to hit the headlines as the undisputed leader of the Congress. The Gandhian Congress is thus only thirty years old. But public memory is notoriously short and the part that the Liberals played in our freedom-movement has been studiously ignored. If the Congress is still, as I have suggested, a name to conjure with, the credit for it must, in all fairness, be ascribed to the Liberals who held the fort for a longer period than the Gandhian Congressmen. These latter merely stepped into the breach created by the resignation of the former *en masse* from the organisation whose imposing edifice they had built, brick by brick, with their loving hands.

"If You have Tears . . ."

I wish to put it on record that brave men lived before, as well as since, Agamemnon, and that if the Congress continues to enjoy a modicum of prestige today, notwithstanding its eggregious errors (of commission, no less than of omission), it is more owing to the indefatigable labours of those much-maligned Liberals who first taught our people that there is a science called politics than to their cheap-jack successors who exhorted them in sundry devious ways to *unlearn* that instructive lesson. The Liberals made the Congress and the country: what their successors can legitimately boast of is that they have, of *malice prepense*, unmade both. If we have tears we must be prepared to shed them now: if we have none we must at least remain silent and not keep babbling about those successors' "achievements" as Falstaff, in his dotage, kept babbling about the green fields. In every other clime it has been experimentally proved that all men cannot be fooled all the time: should it be left to *our* clime alone to disprove that encouraging dictum? I have been at pains to indicate that this persistent slogan of Gandhian Congressmen that they (and none else) were the torch-bearers of our freedom is just a silly symphony and nothing more: there had been other, and mightier, Richmonds in the field.

Stealing the Thunder of the Mahasabha

I have mentioned that, in 1946, our present

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

"Ma Baps" won the elections by the diabolically clever ruse of dangling before the gullible public the enticing carrot of "No Pakistan save and except over our dead bodies." By that detestable deception they were able to steal the thunder of the Hindu Mahasabha which had all along been fighting for the preservation of the precious unity of our beloved Motherland. They assured the electorate that, on the point of that preservation, there was not a pin to choose between themselves and the Mahasabhaites: their ideology was the same, and, since that was so (they argued), the people would do well to vote for the older and the more popular organisation. That argument, specious in every part of it, sounded the death-knell of the hopes of the Hindu Mahasabha: the populace swallowed it—hook, line and sinker.

Paying the "Ultimate Forfeit"

They did not stop to enquire why, *only during election-time,* our revered Congress leaders detected the fundamental concordance in the aims of both the parties and began paying homage to the precious unity of our beloved Motherland. *Before* the elections that enthusiasm had been conspicuous by its absence: Congressmen had been "caving in" to the ever-mounting demands of the Muslim League and I, for one, had no doubt whatever in my mind that they would not hesitate, should the contingency arise, to pay the "ultimate forfeit." This gradual "caving in" was with no other object than that of the final and most abject surrender. Step by step they had given in to Muslim intransigence until there was practically nothing more to be sacrificed by them.

Talking with Their Tongues in Their Cheeks

My contention is that the Congress *deliberately* misled the country during the last elections on the question of partition. When it promised that it would not yield an inch to the Quaid-e-Azam on the issue—no more than their rivals the Mahasabhaites—it was manifestly talking with its tongue in its cheek and indulging in a portentous wink. Its past actions completely belied that alluring promise. If our countrymen had been a little bit wiser than they had given evidence of being at the time of the crucial test they would, of a certainty, not have risen to that bait: they would have confronted it with its previous record and told it that sufficient unto the day was the evil thereof and that those who wished to sup with it needed a long spoon. But our countrymen, as it unfortunately transpired, were not sufficiently wise and placed implicit reliance on those promises. The Congress thus came to power—and promptly went back on its word. The rest is current history.

Once Bitten Twice Shy

The point I am desirous of making is that in our relations with that monstrosity known as the Congress organisation our motto should be: "Once bitten twice shy." We have been bitten *more than once.* We should thus be chary of giving further hostages to fortune in the shape of squandering away our child-like trust on a party whose word is notoriously not its bond and whose whole conception of politics is endless tergiversation with respect to the very people who had catapulted it into the seat of authority. The Congress (new style) has never had any undue consideration for the Hindus and, with the passing of time, has been having less and less of it still. It wants their votes tremendously, no doubt, but, after securing them, it just has no use for them. In its eyes the Hindus are "the lesser breeds without the law": they are mere hewers of wood and drawers of water. Even where they are in a majority—and in a preponderating majority at that—they hardly count: *a fortiori,* where they are in a minority they do not count *at all.* It is a happy state of affairs for the Congress. It can say in the latter instance that, being in a minority, they (the Hindus) must, *ipso facto,* occupy an inferior position to that of the Muslims; and it can say, in the former instance, that, our State being "purely secular," their being in a majority—even in a preponderating majority—not only does not confer on them a superior position *vis-a-vis* the Muslims but, actually, confers on them an inferior position because, in the interests of "secularity," the Muslims must be treated very, very generously, indeed, thereby enabling them to forget that they are in a minority. The Hindus lose either way: their being in a majority does not help them, and their being in a minority is a positive hindrance to their well-being.

"Secularism"

The real meaning of "secularism" thus becomes pellucidly clear. "Secularism," according to the Congress's interpretation of it, is out-and-out pro-Muslimism. *It is the religion of appeasement*—that "putrefying albatross" which the Congress clamped on its neck decades ago for reasons peculiarly its own. I am writing this article on the eve of the general elections; and it is my duty to point out to my readers that, on November 15, Pandit Nehru told a public meeting at Pathankot that every vote for the Congress in the ensuing general elections "would be a vote for secularism." As though to clarify it further he proceeded to say:

> "Every vote cast in favour of the Congress is a vote against communalism which has weakened the country."

"Secularism" will be a slogan to be reckoned with in the ensuing electoral fight and I should, therefore, like to linger a while over it so that our beloved Panditji may not be allowed to have the last word on the subject. There should be some one, among the 380 millions of our countrymen, to muster sufficient courage to stand up to him and say that, highly-gifted as he is, he has been talking drivel—nauseating

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

drivel—and talking it, too, to buttress an extremely untenable position.

Abuse of Words

Of late he has been waxing even more "secular" than usual and we may be certain that, as the zero hour approaches, the spate of eloquence will swell into a roaring torrent that will submerge all the low-lying areas where the "communal" ogres hide their diminished heads in shame. I should, however, like to draw his attention to the fact that slogan-fed as the Congress has been since 1920 the slogan that has damaged the interest of the country most has been this one of "secularism" and none other. It started with a woeful abuse of words. Pandit Nehru is credited, in certain circles, with being a lord of language; and it is all the more intriguing, therefore, that he should have been responsible for this initial misinterpretation of the term. Nowhere in the world has it the connotation that he has imparted to it out of the cornucopia of his learning; and nowhere in the world has it been so systematically abused as he has, from an overweening sense of his coign of vantage, been abusing it. But I shall not go into that question now: when one becomes the Premier of a country one has (it is to be presumed) the fundamental right to invent new terms or to infuse new meanings into old ones; and when one combines in one's anointed person the twin posts of Premier of the country and of President of the caucus of which he is such a shining ornament one enjoys (it is to be further presumed) the other fundamental right of being intoxicated with the exuberance of his own verbosity.

Coming down to Brass Tacks

Even taking Pandit Nehru's "secularism" at his own connotation of it, it behoves us to remind him that, doubtless with the best of intentions, he has been barking up the wrong tree from the moment he began his indefatigable researches into the meanings and applications of words. Charles Lamb divided mankind, broadly, into two classes—the borrowers and the lenders. Pandit Nehru divides the world or at least the Indian part of it, broadly, into two classes—the "secularists" (led by his illustrious self) and the "communalists." I have no hesitation in saying that, in doing so, he has been doing less than justice to the latter and more than justice to the former. If we go right back to the days of partition any man with a head tightly screwed on to his shoulders and not loosely attached thereto will be impelled to arraign Pandit Nehru and his myrmidons at the bar of public opinion as rank "communalists" that gaily gave their *imprimatur* to the partitioning of our country on the basis of the pernicious "two-nation" theory that was propounded with a fanfaronade of trumpets, by those arch disruptionists in our midst, the Muslim Leaguers.

Congressmen are the Arch-Communalists

Pandering endlessly to the whims of an arch-communal organisation and cheerfully signing away a not inconsiderable portion of our beloved Motherland to them by way of a tacit acknowledgement of their preposterous claims is being not only communal but being communal with a vengeance, being communal without any *arriere-pensee* whatsoever. There can be no two opinions on the point. It is as plain as way to parish-church. No amount of Nehru-ian "broad-mindedness" can alter the fact that when one seeks one's spiritual home among communalists, naked and unashamed, communalists back, belly and sides, communalists that swear by their dastardly "-ism" and "no damned nonsense," one is deep-dyed in communalism oneself and has no moral right to denounce others for *their* "parochialism," real or imagined. Ever since that fatal year, 1920, the Congress has had no other policy or programme than that of ingloriously surrendering to every demand of the Muslims, of surrendering without so much as the semblance of a fight. It was so mortally afraid of wounding the susceptibilities of the Muslims that even when confronted with the notorious "Communal Award" of the then Labour Prime Minister, Mr. Ramsay MacDonald, it decided neither to oppose nor to accept it. That "neither for nor against" attitude strengthened the Muslims in their conviction that the Congress, next to the British themselves, was their staunchest ally.

The Next Biggest Surrender

The next biggest surrender on the part of the Congress was the resolution that its Working Committee passed in Calcutta a decade or so ago which contained within it the poisonous seed of partition. It was, as usual, a rambling affair that, while paying lip-service to the essential unity of our country in its earlier part, proceeded to affirm that its principle of non-violence being well-known it could not *even* "contemplate" the "coercing" of a unit that wanted to secede to remain within its parental fold. Thereby the creation of Pakistan was facilitated enormously. (Even Lord Wavell, it may be recalled, was compelled, by the sheer logic of facts, to stress the fundamental "geographical unity" of our country in his memorable Address to the Associated Chambers of Commerce in Calcutta in December, 1943. It was left to our "secular" Congressmen to destroy it ruthlessly!) Sir Stafford Cripps was not slow to capitalise on it; and it was precisely with the help of this resolution that Acharya Kripalani was able to convince the A.-I. C. C. meeting that was convened hastily in June or July of 1947 in New Delhi for the express purpose of "ratifying" Pandit Nehru's acceptance of Lord Mountbatten's "June 3 Plan" on his sole responsibility—it was precisely with the help of this resolution, I repeat, that Acharya Kripalani was able to convince that A.-I.C.C. meeting that Pandit Nehru's impulsive action was only a natural corollary to it.

Of course, it never occurred to anyone to ask the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

distinguished Acharya how it happened that Congressmen forgot the existence of this resolution when they unequivocally promised the electorate *earlier* that Mr. Jinnah would not get Pakistan "save and except over their dead bodies"!

THE REAL COMMUNALISTS

I have marshalled all these arguments to show that it does not lie in the mouth of Pandit Nehru to call those Hindus "communal" who have consistently been upholding the unity ideal—the same, be it remembered, that Lord Wavell himself had so vigorously countenanced in 1943 in his Calcutta address quoted above—and who have been ceaselessly lamenting the disastrous vivisection of our thrice-holy land. The real "nationalists" are these Hindus: the real "communalists" are, and have been, the Muslim Leaguers first and then our valiant Congressmen who surrendered to them without firing a single shot. Neither the Hindu Mahasabha, nor the R.S.S., nor the Ram Rajya Parishad nor the Bharatiya Jan Sangh are "communal" bodies: it is the Congress that is the "communal" body *a outrance* and it is Pandit Nehru himself who, next to the Muslim Leaguers, is our "arch-communal" politician. He admitted cheerfully at that A.-I. C. C. meeting that was held in June or July 1947 that the "responsibility" for accepting the "June 3 Plan" was "wholly his own."

THAT SHOCK TREATMENT

And it was this same Panditji who bethought himself the other day of administering "a shock treatment" to the Congress organisation with a view to rooting out the "communal" elements that, according to his own testimony, had, since a year or so ago, been seeping into it. In the result he shocked himself into the Presidential *gadi* of the Congress. He is now the Compleat Dictator, though, to be sure, he has modestly disclaimed any dictatorial ambition. But did not Hamlet very nearly say that one may smile and smile and be a dictator? Besides, he has become a dictator only with the laudable object of curbing "Hindu communalism!" In his considered judgment "Hindu communalism" is a monster that has, for some time now, been raising its ugly head—from wherever it is that monsters generally do raise their ugly heads. Hindus, if we would believe him, have, of late, been forsaking the straight and narrow path that leads to that modern Mount Pisgah where that highest of all religions, "Secularism," has its venerable abode. It was a shock to him to discover that even some eminent Congressmen, like, for instance, Rajarshi Purushottamdas Tandon, the reigning Rashtrapathi, was "bowing in the House of Rimmon." At any rate, before that arch-apostle of "secularism," Shri Rafi Ahmed Kidwai, Tandonji paled into complete insignificance!

SPOILING THE SHIP FOR A HA'PORTH OF TAR

So Tandonji had to go. Tandonji went. He departed in a blaze of glory. "Secularism" was again safe. The Pandit delicately suggested to the A.-I.C.C. that that safety could best be preserved if, in addition to his onerous duties as the Prime Minister, he could be invested with the not less burdensome responsibilities of President of the Congress as well; there was such a thing, after all (was there not?), as spoiling the ship for a ha'porth of tar! An "infant democracy" like ours has to be nursed into an adult democracy; and what better way was there so to nurse it than the one that lay through the sylvan glades of dictatorship? Are we not still politically immature? That being so it is incumbent on us to choose a dictator who, while not sparing the rod, will make us, at some date in the distant future, politically mature. Thus, at one fell storke, as it were, our beloved Panditji administered his "shock treatment" to the country and combined in himself the twin posts of Premier and of Rashtrapathi. Shri Kidwai, who resigned from the Congress owing to the presence in it of "communalists" like Tandonji, has returned to its fold after the welcome purge of the latter. With Pandit Nehru as the Captain and Janab Kidwai Saheb as the Chief Mate the ship of our State can now be relied upon to be steered smoothly into the safe waters of "secularism." Pandit Nehru, as I pointed out earlier, told his audience at Pathankot on November 15 that, in the ensuing general elections, a vote cast for the Congress "would be a vote cast for secularism." The aforementioned "shock treatment," with its attendant consequences, had also been in the nature of a vote cast for "secularism." The "Hindu Communalists" (thanks be!) were completely routed.

"UNDER WHICH KING, BESONIAN, SPEAK OR DIE!"

"Secularism" is thus the major issue in the coming general elections. "Under which King, Besonian, speak or die!" I have been at pains to indicate what "secularism" really means. It means pro-Muslimism raised to the *nth* degree. It means Appeasement with a capital "A". It means *further* ignoble truckling to Pakistani intransigence. A foretaste of it was given by Pandit Nehru after the assassination of Mr. Liaquat Ali Khan on October 16. That calamity, according to him, was bound to draw India and Pakistan closer together. It was a disaster as much to India as it was to Pakistan. He has suited his action to his word. He is going "all out" to support Pakistan's candidature to the seat in the Security Council shortly to be rendered vacant by India's retirement from it. It is *one more gesture*! Nor have we been left in any doubt about it.

As the Special Correspondent in New Delhi of the *Times of India*, writing in its issue of November 16, unctuously says:

> "India's decision to support Pakistan is regarded here as the latest proof of her desire to restore friendly relations with Pakistan which has been evident since the death of Mr. Liaquat Ali Khan.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The Indian decision is, however, in refreshing contrast to that of Pakistan who did not vote in favour of India when a similar election to the Security Council took place in 1949. Actually, bitter campaigning by Pakistan was carried on against India being elected to the Security Council on that occasion."

One-way Traffic

It is thus clear that the more Pakistan kicks us the more "secular" our Government becomes. (It was, by the way, during this period of further appeasement that Pakistani soldiers made a new series of incursions into Assamese villages!) There has been no sign on Pakistan's part that similar brotherly gestures will be forthcoming from *its* side. But why should there have been any such sign? Pakistan knows fully well that, without putting itself to that unnecessary trouble, it can wangle what it wants from our side. Putting itself to that unnecessary trouble would, in the circumstances, be what Shakespeare has called "a wasteful and ridiculous excess." "Secularism" is a purely one-way traffic: the Hindus—*even after partition*—must, forsooth, be hundred per cent "secular": the Muslims, on the contrary, may continue to be "communal" to their hearts' content. "Secularism" should be *our* "doxy": to be eternally communal, however, is the Muslims' privilege,—*prerogative,* rather. They are the modern *Herrenvolk*. They have the best of both the dominions. They are terrifically at ease in Sion.

That Curious Dichotomy

The point is—why should they not be? They cannot help securing endless advantages if ours is a thoroughly impotent State. They are going to secure more still in the Paris talks on Kashmir between Dr. Frank Graham and the delegates from India and Pakistan. Shri B. N. Rau has already blessed the Graham Report. Shri D. P. Dhar, former Deputy Home Minister of Kashmir and another Indian delegate to the General Assembly, has done the same. The happy ending in Kashmir seems to be, at long last, in sight. In Indo-Pak disputes it need hardly be stressed where, precisely, the happiness is bound to reside—in India or in Pakistan. It was wittily remarked of Pitt that he would drink the wine and that the Clerk of the House of Commons would get the headache. A similar bizarre dichotomy prevails in Indo-Pak affairs: *we* get the headache while our enviable brethren across the border drink the wine. The four-year old Kashmir imbroglio may, as I have hinted, very well have an ending during the Paris parleys. Whether it is likely to be a "happy" ending and, if so, which country (India or Pakistan) is destined to be "happy" remains to be seen: though, if the past, as they say, is any index of the future, even the merest tyro in politics can venture a prophecy in the matter.

Wanted: A Change of Policy

I do not feel myself called upon to apologise to my readers for writing at such length on "secularism." Pandit Nehru dissertates at *greater* length upon it. The words come trippingly on his tongue when that topic is to the fore. I am not in a position to say whether he saws the air too much with his hands: but I am certain that he tears the passion to tatters, to very rags. He "o'erdoes Termagant." The case *for* "secularism" has been trotted out far too often: it is but meet that the case *against* it should also be allowed a fair innings. I have defined "secularism" as the religion of appeasement. Pandit Nehru has recently admitted that he *has* been appeasing Pakistan. He admitted it, however, with an unmistakable air of triumph. There was such a swagger, such a braggadocio, in his admission that one had no option but to suspect that that policy had come to stay, be the consequences what they might. His decision to support Pakistan's candidature to the Security Council, even though Pakistan had gone *out of its way* in 1949 to thwart India's chances in the same contest, fully bears out one's serious misgivings. It is, therefore, imperative that the electorate should be enabled to know what irreparable damage that policy has already done to the country. If that policy continues to be followed the damage to the country may well-nigh be staggering.

Reciprocity

Dr. Shyama Prasad Mookerjee has been reiterating time out of mind that "reciprocity" should, in future, take the place of "secularism" in our dealings with our extremely considerate neighbour. In this he is eminently right: a bully should be told where he gets off. It will do him a world of good. It has been said that a nation's foreign policy ought to be one of "enlightened self-interest." In our foreign policy with respect to Pakistan this enlightened self-interest has been conspicuous by its absence. We give—and Pakistan takes. Pakistan kicks us—and we lick its feet. There is neither self-interest nor enlightenment in such a policy. *Only once did we put it into practice—and it paid us handsome dividends.* When, a few months ago, a Pakistani brigade rushed into the Poonch area in Kashmir, Pandit Nehru massed our troops on the Pak border. That gave the late Mr. Liaquat Ali Khan "furiously to think." He had to unclench his fists. He had to simmer down considerably. I do not think Pandit Nehru has had cause to regret that decision of his to sit up and take notice at last. The *one* occasion when he took a strong line *vis-a-vis* Pakistan brought him a large recompense. Why, then, does he not profit by that heartening experience? Whenever he tried "secularism" in relation to Pakistan he failed miserably: when he—*just for once*—tried "reciprocity" he won—*hands down*. The moral is plain: a bully must be paid back in his own coin. Pakistan understands only the simple language of "reciprocity" and not the complicated lingo of "secularism."

Congress's "Achievements"

The party in power catalogues its "achievements"

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

when going to the polls. The Congress's achievements are "writ large" on the faces of the refugees and on the countenance of the country itself. It is a tale of immitigable woe. Misery meets the eye wherever it turns. The picture is one of "inspissated gloom," in Dr. Johnson's celebrated phrase. We are supping full of horrors. Famine stalks the land. Cloth is scarce. Money is tight. There are no amenities of any description. Four years after "independence" the common man is worse off than he had ever been before. Independence has left a bitter taste in his mouth. A tree is judged by its fruits. Judged thus, the Congress comes off very badly, indeed. It accepted partition in a tarnation hurry. Nearly all our present ills are traceable to that impetuous action. Congressmen themselves now admit it: *only*, after admitting it they do not, as they should, go down on their knees before the people and crave their pardon. Indeed, they still put on airs as the saviours of the country. *Anywhere else* they would have been hounded out of office long ago. But here they continue to "sit pretty." Like the camomile which, as the poet says, the more it is trodden on the more it thrives, the more they are ruining our beloved Motherland the more they are growing in pomp and circumstance. Verily, the peacock has nothing on them!

The Contrast

One of the Congress's greatest achievements is that while it has tacitly acquiesced in the ousting of the Hindus from Pakistan and in the treatment of the few that still contrive to remain there as helots it has taken good care to see that the Muslims here get the fairest of deals imaginable. They can go to Pakistan and return and go to Pakistan again—and while here can live without the slightest apprehension about their safety. Their allegiance is too facilely taken for granted. A Khaliquzzaman swears loyalty to India and overnight leaves for Pakistan and there starts a raging and tearing campaign against India. A Hussain Imam does the same. Ever so many Muslims follow in the illustrious footsteps of these two. Pakistan is still the spiritual home of the bulk of the Muslims: to them, as a character in a Dickens' novel puts it, "Colin's the friend, not Short." But our Government, in the tiresome name of "secularism," affects to turn a blind eye to their *parti pris*. The Muslims' property in India is as safe as, if not safer than, that in Pakistan. India has become a gigantic "safe deposit vault" for them. The Evacuee Property Act that our authorities have passed, after an unconscionable delay, has not, to put it mildly, helped the refugees overmuch; and in the few instances where they could be helped (in a vague sort of way) there has never been any knowing when New Delhi would take it into its Quixotic head to intervene and rescue the Muslim concerned from a tight corner.

Only the other day, for instance, Mr. Achhru Ram, the Custodian-General, came to grief for having ventured to use the Act in the manner in which it should have been used. I am not just now concerning myself with the details of that controversy. The broad outlines are that the Muslim millionaire involved was given a "No Objection" certificate by our altruistic Government whereby he got his property of well over 60 lakhs restored to him. No amount of legal quibbling on the part of our rulers about the *minutae* of the dispute can alter the essentials. The Muslims here somehow do get rescued out of tight corners by our arch-apostles of "secularism": the recent Chhatriwala case has but highlighted a glaring anomaly. A parallel to that in Pakistan with a Hindu involved can hardly be visualised: imagination boggles at it. In Pakistan, the "Kaffir" must be hounded out and his property confiscated, there being nothing in the nature of a restraining influence, in the nature of a *quid pro quo*, over here, to halt it in its insensate course. If Pakistanies had but apprehended that Muslims in India would receive a *similar* treatment they would, without question, have been on their best behaviour. But they have known all along that our "purely secular" Government would, in Hamlet's exquisite phrase, "crook the pregnant hinges of its knees" to them, whatever be their heinous offences against the minority community in their midst. We assure them *beforehand* that no matter what they choose to do to the Hindus over there the interests of the Muslims here will be protected to the uttermost. This is tantamount to giving them a blank cheque, as it were. Nowhere in the world would such a humiliating situation have been tolerated. But when a Government hitches its wagon to the star of "secularism" no absurdity, I suppose, can be ruled out. Hindu lives do not matter, Hindu honour does not matter, Hindu wealth does not matter: what matters (and matters a great deal) is the safeguarding of *Muslim* lives, *Muslim* honour, *Muslim* wealth!

Oust the Congress from Power

The question is: In view of what I have related above will our people be inclined to vote the Congress into power again? If they are so inclined they fully deserve all their present miseries (and a few more.) Let them not be deterred from voting against them by the unwarranted consideration whether there is any *other* party to take over the reins of Government if the Congress loses in the elections. That red herring had been trailed by the British Government across our path *ad nauseam*. But we know that when the British relinquished power there *were* people to take it over. There will—I doubt not—be people to "take over" if the *Congress* also, in its turn, lays down authority: there are as many fish in the sea as ever came out of it! The hour *will* produce the men. The important thing is first to oust the Congress from office: the rest will follow automatically.

PREVAILING MISCONCEPTIONS ABOUT BHARATA NATYA

By E. KRISHNA IYER, Advocate

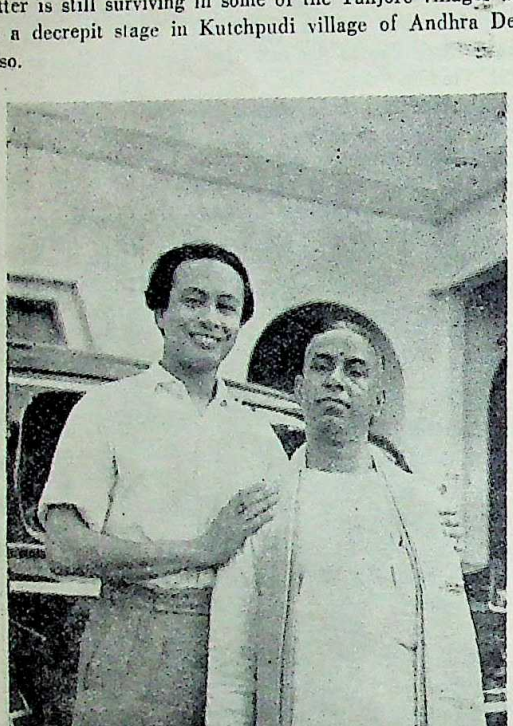
When Anna Pavlova, the celebrated Russian ballerina, visited India with her dance troupe in 1929, and wanted to see for herself the much heard of 'bayaderes of great beauty and grace dancing sacred dances in temples and secular ones at feasts,' nobody could give her any definite information about the existence of Bharata Natya and its exponents in South India. Her biographer has written, "Those Hindus who had seen these dances in certain temples in far-away places spoke without any particular enthusiasm. There are no schools of dancing in India and it is an art in which nobody is interested." Such was the pitiable condition of Bharata Natya in the 1920s. When Rabindranath Tagore revived the Manipuri style, Uday Shankar and Menaka the Kathak mode and Poet Vallathol the Kathakali, Bharata Natya was only a distant and mysterious name and not an art known enough to be worthy of being handled by the then globe-trotters or seen by respectable cultured people!

It required the pioneering services of an art-minded young advocate* of Madras to take it up boldly, initiate its revival by his own precept and practice, fight for its cause against the anti-nautch leaders, create respect, popularity and a cultured audience for it and to usher in its renaissance in the early 1930s after years of hard work. In the wake of that renaissance came up successive artists of repute like Balasaraswathi and Rukmini Devi, who pushed it up and Ramgopal crowned it by presenting the art to Western audiences and gaining appreciation too for it, as the most classical and refined among Indian dance styles.

Though as a result of all these, Bharata Natya has become immensely popular in India and Ceylon and earned much esteem in Western countries, it is not free from another set of misconceptions entertained by many Indian and foreign writers about its real nature. Most of these writers facilely assume, that it is nothing but a solo dance of women, that it is intended to interpret only love themes, that it is not to be touched by men, that it cannot have any dramatic interest and that such interest is to be found only in Kathakali. Such misconceptions are perhaps due to the fact, that most of those who deal with Indian dance art, have seen only one form of Bharata Natya, whose revival has been well established and not seen or do not know enough of other forms which are just being revived now.

Bhaskar Roy Chowdhury, the celebrated dancer

As a matter of fact, what is now popularly known as "Bharata Natya" is only one of three forms of the old generic system of dance art which went by that same name. In South India, that form was for long known only as 'Sadir Natya' or 'nautch' or 'Dasi Attam.' It was in the hands of professional Devadasi women and it is that solo-dance form that is now practised with enthusiasm by cultured family ladies also. Besides that, there have been and there are still, two other forms of Bharata Natya, namely, the 'Bhagavata Mela' dance-dramas of Tanjore villages depiciting heavy Puranic stories and the lighter 'Kuravanji' ballets, wherein the love-sick heroine is encouraged and helped to attain her object by a fortune-telling gipsy woman.



In all these three forms, the same technique of Bharata Natya with its rhythmic patterns of Adavu;athis, Sollukattus, Thirmanams and Abhinaya is employed,

* The young advocate mentioned above is the author of this article, E. Krishna Iyer. If by profession, he had been a lawyer first and then Editor of the *Free Press* daily and other papers and magazines, he had also been a prominent political worker as a Congress Satyagrahi and a popular City Father of the Madras Corporation Council. But more than all these, it is art that has been the dominating feature of his life and work for over 25 years. As one of the chief founders of the Madras Music Academy, he led the way for the revival of Carnatic music. He was the earliest pioneer who took to Bharata Natya in the 1920s when it was threatened with oblivion and death and brought in a sweeping renaissance in it by his own dancing and propaganda. By further sustained work he took the art out of the hands of decadent professional Devadasis and made cultured and respectable family women take to it. His book *Personalities in Present Day Music* published in 1933 has been the first work of its kind in India in a critical study of contemporary art and artistes in music and dance.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

though in different degrees for a different purpose in each. From before the time of Saraboji, the Tanjore King, the Devadasi Sadir-nautch as the *Nattuva Mela* and the dance-drama of Brahmin Bhagavatars as the *Bhagavata Mela* had been flourishing side by side and the latter is still surviving in some of the Tanjore villages and in a decrepit stage in Kutchpudi village of Andhra Desa also.

The great dancer Ramgopal (*left*) and the author E. Krishna Iyer

In these dance-dramas, as in Kathakali, it is only men that take part and personate male and female characters. Female characters expound not only their respective character-dances but also items familiar in Sadir-nautch, like Alarippu, Jathiswara, Varna and Thillana on appropriate occasions. One has got to be well trained first in the same technique as that of Sadir-nautch before he can take up a character in these dance-dramas. The dances of male characters pertinently differ from those of feminine characters in form. But both are based on the same technique.

Soolamangalam Sitarama Bhagavatar, Merattur Natesa Iyer and Oothukad Swami Bhagavatar among others of the last generation were renowned as great experts in Bharata Natya dance and *abhinaya*, whose art had been the envy of even reputed Devadasi artistes of their time. Even in these days of comparative decadence in this dance-drama tradition, the fomous Varnam 'Dhanike Thakujanara' in Thodi raga is a coveted item. The abhinaya of the Bhagavata Mela art is considered to be purer and more Shastric than that of the Sadir-nautch. The *sollukattus* or rhythmic syllables of its dances are rendered in tune with *ruthi* and hence more melodious than those of the Sadir-nautch. While the Nattuva Mela form of Sadir-nautch is solo and lyrical with 'Sringara' or love theme cloyingly predominating, the Bhagavata Mela form of Bharata Natya is full of dramatic interest with many actor-dancers taking part in it and of varied themes and *rasas*.

It may also be noted here, that in a former generation, the illustrious Krishna Bhagavatar of Kalakshepam fame had danced and expounded *abhinaya* as a man with great effect in his performances. Even in Sadir-nautch, the oldest and greatest living teacher Meenakshisundaram Pillai of Pandanallur himself has given his considered opinion, that certain aspects of it can be handled by attractive young men also and he followed it up by teaching it to Ramgopal of international repute with pleasure. That great dancer as a man presented it before Western audiences and earned appreciation too for it. Above all, the great Bharata himself never intended his Bharata Natya to be any exclusive preserve of women. According to him, it meant a drama enacted by male and female characters with dance and *abhinaya*, among other things, in his technique and the extant Bhagavata Mela dance-drama tradition happens to be the nearest approach to it.

In view of all these, Bharta Natya is to be taken as a great generic system of classical Indian dance art, the common technique of which is applied and applicable in different forms for different purposes. It is not exhausted by the lyrical solo Sadir-nautch of the Devadasis, nor is it devoid of dramatic interest and value, nor are men taboo in it. Present-day development of art and its conceptions being what they are, some critics cannot be satisfied by Bharata Natya except perhaps by the sex appeal of a woman in it!

Social inhibitions have for ages disapproved of women mixing up with men in ordinary dramas and dance-dramas on the stage in India and later prejudices stood in the way of respectable people witnessing and appreciating the dance of Devadasi women. Hence arose the practice of young men personating female characters in dramas and acting and dancing in female costume. In spite of present-day trends in relaxing such social inhibitions, they still persist. It may remind one of similar practices in the Elizabethan days of England. However much we may wish to modernise our notions and practices, we have also to face facts as they are and look at things in the proper perspective, especially regarding our traditional arts and their associated conventions and make the best use of them for further progress. No purpose can be achieved by merely misconceiving or misrepresenting the nature of our traditional arts or ridiculing long-recognised conventions like attractive young men taking to dance as men or in female costume.

After all, art experience, in one sense, is the result of successful illusion transcending realism; and under-

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

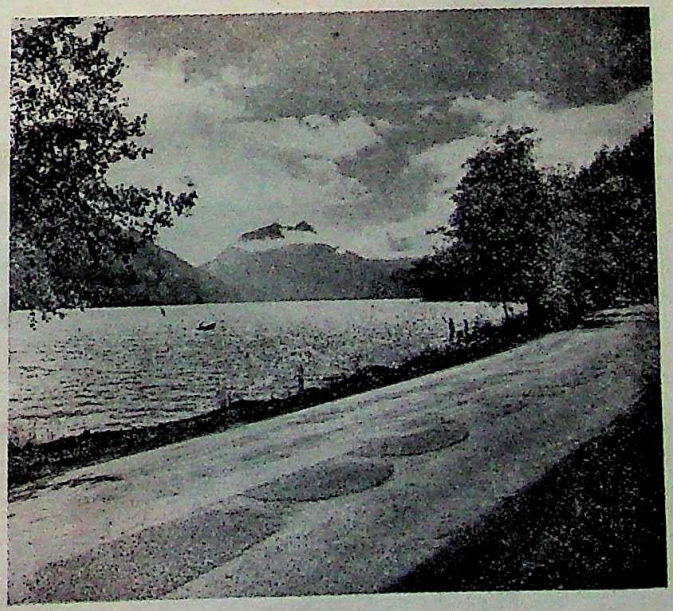
Digitized by Arya Samaj Foundation Chennai and eGangotri

standing people judge of art more by the quality of its form as expounded on the stage, than by looking into the sex of the dancer. The proof of the pudding lies in the eating of it. If a young man gifted with a specially attractive personality is actually found to expound Bharata Natya more convincingly and charmingly than many girl artistes, there need be no further argument about its propriety or otherwise. According to a Western writer on art, "There can be no real artiste who has not the characteristics of both the sexes." The late renowned Nijinsky of Russian ballet was one such real artiste and he is said to have excelled his contemporary ballerinas in dance to the extent of rousing envy in the latter.

No doubt there is a special charm in the lyrical solo Sadir-nautch form of Bharata Natya. But by its very nature, its interest and appeal are limited and it may get hackneyed to the point of boredom. The future of dance art in India lies in developing dance-dramas and ballets of varied themes and interest. Perhaps it is some consciousness of this trend, that has induced Rukmini Devi to go in more for this aspect of the art than the solo one nowadays and Balasaraswathi too to take to Kuravanji.

Ballet—a sort of dance-drama, is considered to be the highest and most spectacular form of dance art in Western countries. Some of our art-lovers, in their enthusiasm to develop similar forms in India also, want to import Western modes into our arts. That it is not necessary and that we have ample materials in our own country to help towards such consummation, can be realised from the still surviving classical dance-dramas and Kuravanji ballets. It is enough if we take in some ideas from Western modes for improving our stage settings and presentation and we need not borrow any technique from elsewhere. Such being the case, it is time that ill informed prejudices against attractive young men taking to Bharata Natya are given up and the nature and details of the extant dance-drama tradition of South India are better known to the public.

———:O:———



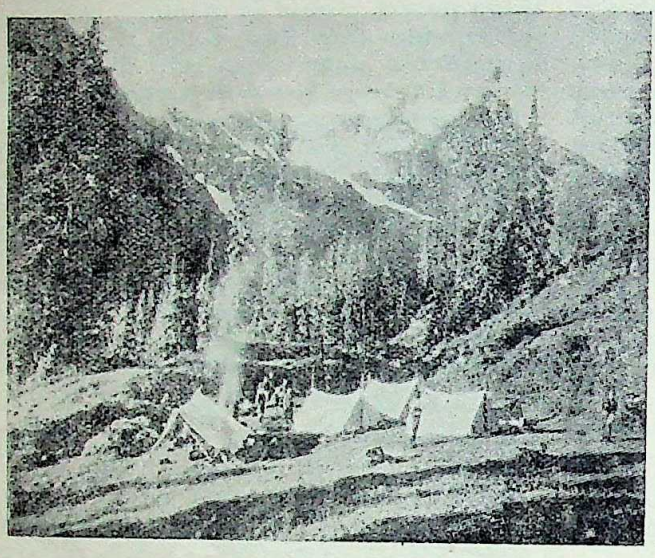
THE OLYMPIC PENINSULA
American National Park Area

By MABEL OTIS ROBINSON

Frontiers always have appealed to the American people, drawing them westward and northward to settle new lands and to marvel at new vistas. Today, however, very few frontiers are left, and most of those in the United States have been set aside by the Government as National Parks for the education and enjoyment of the people. Visiting these parks, most of which are vast, rugged regions almost untouched by man, a twentieth-century American can appreciate the tremendous odds against which his forefathers struggled in exploring and settling the nation.

One of the most fabulous of these virgin land areas is the Olympic Peninsula, a territory in the Pacific Coast State of Washington which embraces Olympic National Park, Olympic National Forest, and a vast surrounding spread of land where nature displays her primitive splendor. This area is so large that mileage figures total 350 miles on the road that rings the Peninsula. This broad Olympic Loop Highway is the only one which completely encircles one range of mountains, the Olympics. It is one of the most scenic drives on the North American continent. The highway can be entered from several points, one of them at Port Townsend which is reached by a ferry trip across Puget Sound from the cities of Seattle or Tacoma.

The highway from Port Townsend twists along wooded shores to Discovery Bay, a sheltered harbor



A modern highway borders one of the lakes in the national park of the Olympic Peninsula, a wilderness area on the Pacific Coast

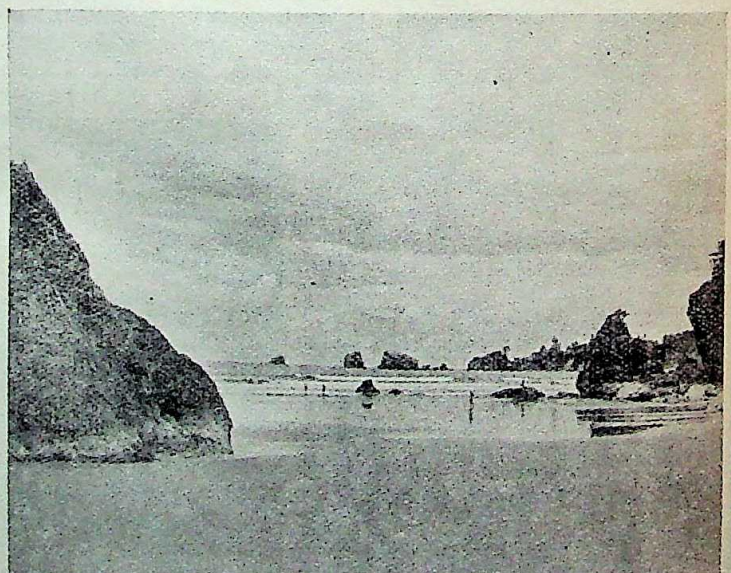
Digitized by Arya Samaj Foundation Chennai and eGangotri

where the ships of the English navigator Captain George Vancouver anchord in 1792 on the first voyage of discovery through Puget Sound. Just beyond Port Townsend is Port Angeles, famous for its pastel sun-

American vacationeers pitch camp in the shadow of the Olympic mountains in the Pacific Coast State of Washington



sets and for its rippling waters which have a heavy run of salmon every year.

From Port Angeles the traveller has a view across the Strait of Juan de Fuca, a 2,000-mile inlet in the Pacific Ocean. This strait is bordered by mighty forests, towering mountains, cities, and towns. Great ships from every nation traverse its waters. It is dotted with green islands, between which graceful yachts and noisy motor boats move. On Vancouver Island across the Strait is the quaint Canadian city of Victoria, a bit of old England transplanted to the new world.

From Port Angeles, a road branches south toward Hurricane Ridge, following the route along the Ridge which was the one taken by the first party of explorers of the interior of the Peninsula. Thousands of elk, protected by the U. S. Forest Service, are scattered through this district, as well as many bears. From Hurricane Ridge the grand peaks of the Olympic Mountains rise in all directions, and also in range of vision are Mount Baker and Mount Rainier, Vancouver Island, and the Strait of Georgia. Few other places in the United States offer such an inspiring panorama of forest, sea, and mountain scenery.

For several miles the Loop Highway follows the northern shore of Lake Crescent, whose sapphire blue waters mirror the surrounding mountains. Near the lake are two interesting resort hotels near hot mineral springs.

Many visitors to the Olympic Peninsula go by pack train or on foot into the really virgin country, camping out, delving into hidden canyons, climbing glaciers, and penetrating mountain meadows tucked away in unexpected places. The Loop Highway also carries the visitor into lumbering country where even temperatures and heavy winter rainfalls produce amazing rapid growths of hemlock, spruce, and pine. In this area are the unique rain forests. Lichen and ferns entangle the trees which cascade long streamers of yellow and brown vines. Thick moss lies beneath the ferns and seedlings spring up underfoot. Roads drop into mountain glens where sunlight rarely penetrates. On rainy days, the thick foliage is a great umbrella, covering a land of mystery. At twilight the spruce stand dark and the hemlocks cut delicate silhouettes against the sky. Only in the morning does the sun manage to cast young, short shadows into the encircling gloom of this deep, green forest wilderness.

The Olympic Peninsula offers the traveller a variety of scenery including rugged coast-lines such as this

Many of the pack trails through the Olympic Penin-

Digitized by Arya Samaj Foundation Chennai and eGangotri

sula are very difficult, testing the traveller's endurance by leading him along winding ledges above canyons through which rush the swift waters of snow-fed streams. But if he is able to withstand the rigors of such a trip he will be repaid by heavenly flower meadows, glaciers of solemn dignity spreading into great ice fields, wild life sanctuaries where elk, deer, and black bears roam, where mountain goats leap the peaks and eagles nest in the craggy mountain heights.

The broad, tranquil Quinault Lake is a fisherman's paradise. It is also the starting place for guided canoe trips to the Pacific Ocean. These dugout canoes hold seven or eight people and are motor-powered. In them, the visitor glides across the Lake into a river which winds through deep forests and then whirls into the rapids on its final dash to the Pacific Ocean.

Along a hundred miles of the irregular shore line of the Olympic Peninsula the mighty waters of the Pacific pound. Huge cliffs plunge into the ocean, misted in spray. Trees, stunted by generations of wind and weather, cling tenaciously to rock or shallow soil. Down the coast is the huge inlet of Grays Harbor on whose banks are three towns supported by lumbering and fishing industries. Turning inland, the traveller can follow a road going north along the 70-mile arm of the sea known as Hood Canal. This Canal is actually a channel gouged out by glaciers centuries ago and flanked today by a broad highway.

American conservationists believe that the preservation of wild life sanctuaries and forest reserves and recreational areas is essential to the national well-being. Vast as they are, the national parks of the Olympic Peninsula and of other sections of the nation represent only one per cent of the total land area of the United States but an area sufficiently large to contribute much to the nation when used for conservation purposes. or for recreation.—From *Trailways Magazine*.

———:O:———

THE ENGLISH JUDICIARY AND THE TRIAL OF NANDAKUMAR

At Calcutta in the 18th Century

By SANAT KUMAR SARKAR,
Ex-Secretary, Calcutta University Historical Society

Foundation of Calcutta

Bengal witnessed the entry in the province of the European merchants in large numbers with the foundation of a Dutch factory at Chinsura in 1625. The English first stepped into Bengal on the authority of a *Firman* permitting them to carry on trade there in 1634, and established factories at Hooghly, Dacca, Rajmahal, Malda and other places. Within a few years the trade of the English Company in this province grew steadily both in volume and in value. The Company looked to Bengal for the regular supply of saltpetre to Europe. They also exported a large quantity of silk and silk goods. Sugar and cotton were also articles of export and by 1689, it was found that the investments of the Company had risen up to £15,000.

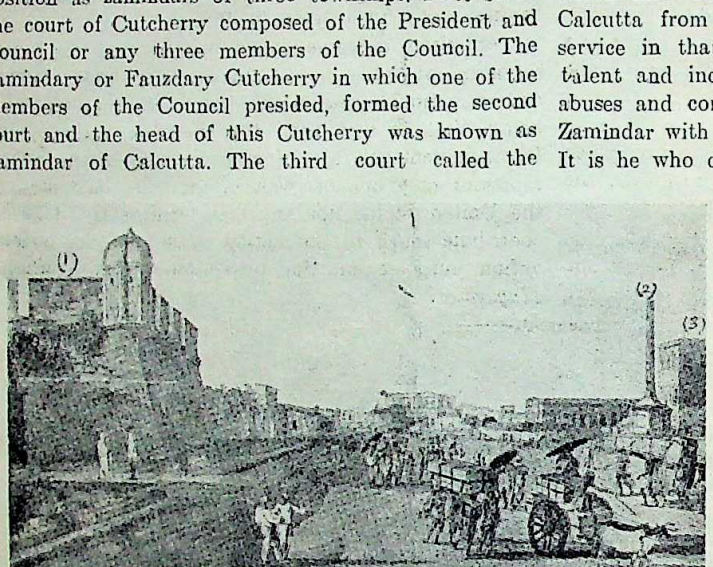
The rupture having occurred with Shaistha Khan, Nawab Nazim (Governor of the province in Muhammedan times) of Bengal in October 1686, the English left Bengal and retired to Madras. It was in August 1690, the English under Job Charnock, "a man of courage without military experience" as described by Orme, a distinguished historian, landed again at Sutanatee and erected a few *hats* at the place which was destined to grow into the capital of the British Empire in India. In 1696, a local rebellion provided an excuse for fortyfying their factory and building a fort there called Fort-William. This old fort, which served as the Company's ware-house and was re-built and re-shaped in course of time, lost its importance when Calcutta was recaptured from Nawab Serajuddoulah in 1757 and disappeared in *toto* during the administration of Marquis of Hastings. Its location and site was a matter of much controversy and created many conjectures, which came to an end when the whole north end of the fort was found in course of erecting E. I. Railway office in Calcutta in 1882. The discovery of a large map of old Calcutta dated 1753 in King's library in the British Museum in the year 1889 decided finally its exact site and location.

By virtue of a *Nishan* (permission) obtained from Prince Azim-usha-shan, Mughal Governor and grandson of Aurangzeb in 1698, the Company purchased from the existing holders the right and titles of three villages Sutanatee, Govindpur and Calcutta at an annual rent of Rs. 1200 and obtained the status of Zamindars in Bengal. The copy of *Binamah* (deed of purchase) dated 9th November 1698 bearing the seal of the *Quazi* and signatures of Zamindars is still preserved in the British Museum (Addit. MSS. No. 24039).

Calcutta was raised to the rank of a Presidency and was named "Fort William in Bengal" and a President and Council were appointed to administer it in 1699.

The erection of Fort William and acquisition of Zamindary rights gave the Company not only a *locus standi* in Bengal but also acted as the foundation of the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar



Digitized by Arya Samaj Foundation Chennai and eGangotri

two pillars upon which the English Company's political and commercial supremacy in India rested.

The first President was one Mr. John Beard. No law-courts had yet been established.

THE ENGLISH ZAMINDARY COURTS

The Judicatures that the Company set up at the outset in Calcutta were based upon the Company's position as zamindars of three townships. First stood the court of Cutcherry composed of the President and Council or any three members of the Council. The Zamindary or Fauzdary Cutcherry in which one of the members of the Council presided, formed the second court and the head of this Cutcherry was known as Zamindar of Calcutta. The third court called the

Street view of Dalhousie Square in the latter part of the 18th century showing (1) South-eastern portion of old Fort William, (now G.P.O.) and Calcutta Collectorate Office, (2) Holwell's Monument removed in 1940 and (3) Writers' Buildings still existing

Collector's Cutcherry came into existence ever since the Company had anything to do with the collection of ground rent. Studying the consultations of the Council of 1704 and 1706, it can be avowed that the Courts of Cutcherry were established in 1704. *De facto* the same person filled the post of Zamindar and Collector in the early period.

The functions of the Zamindar whose Cutcherry was situated in Calcutta were to farm out lands and to punish the tenants who failed to pay rent by way of confinement and whipping. The Zamindar acted in a double capacity, each distinct and independent of the other, one as the Superintendent and Collector of revenue, the other as the judge or presiding officer of the Zamindary Cutcherry, a tribunal constituted for hearing, trying and determining all matters both civil and criminal, wherein the subjects of the Mughal Emperor were concerned. In case of capital punishment he was empowered to give judgment but only the approbation of the President and Council was necessary when lash was inflicted till death. The salary attached to the post was Rs. 2,000 per month. The bulk of the receipts appears to have gone into his pocket. Besides these, he was deeply engaged in private trade and was given huge presents by parties to decide the causes in their favour.

Among the Company's many servants who filled this lucrative and covetable post, the name of John Zepheniah Holwell stands singularly prominent and worth mentioning. Holding the post of Zamindar of Calcutta from 1752 to 1758, he rendered a notable service in that capacity and showed extraordinary talent and indomitable energy to eradicate countless abuses and corruptions that crept into the post of Zamindar with the approval of the Court of Directors. It is he who discovering that all the important and invaluable documents of the Company prior to 1737 had either been lost or destroyed due to the carelessness and negligence of the Company's subordinates as well as to the freaks of Nature, decided to preserve them systematically from 1732. Holwell's *India Tracts*, published by him, contain useful information regarding Calcutta.

One Babu Govindram Mitter, whose descendants are yet an accreditated family in Calcutta, acted as Deputy Zamindar or Dewan to the Zamindar from 1720 to 1756 and accumulated considerable wealth.

The functions of the Collector, the head of the Collector's Cutcherry, were mainly to issue under the Company's seal, the leases called *Pattahs* to the inhabitants for the tenures of their houses and grounds and to dispose of the petty farms, which constituted part of the revenue of the town of Calcutta.

From *Pattahs* (a simple form of lease in respect of lands mentioning the name of persons to whom lands were given and the rent to be paid) granted to the individuals the names of the English Zamindars and Collectors are known to us. The registration of several *Pattahs* carrying the signature of Zamindar Holwell during the invasion of Calcutta still exists.

After the re-capture of Calcutta one Mr. Collet was the only Zamindar under that designation existent till 1759 when he was succeeded by the first Collector or Collector-General, Mr. William Frankland (to which title the office appears to have altered). In the latter part of the century, the duties devolved upon, and assigned to, the Collector were distributed amongst the Justices of the Peace, the Custom Master and Mayor's Court. The majority of records of this office except the copies of *Pattahs* of Calcutta ground rent collections were destroyed in 1756. During the period

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

between 1758 to 1775 *Pattahs* were given by the Collector as well as the Collector-General.

It must be noted that the courts long established by Mughal authorities existed in Calcutta also.

With the introduction of Mayor's Court instances are not rare when a wrangle ensued between Zamindary Courts and Mayor's Court over the powers and jurisdiction of them. Thus, it is found that in 1758 Holwell protested that "bulk of the causes that came before the Cutcherry were sums cognisable by Mayor's Court" and on 1st March, 1754, Mayor's Court wrote to the Court of Directors, complaining that the Collector refused at their command to release a person who had been confined and who was a party to a cause brought into their court.

Sir Robert Chambers

Mayor's Court

The insistence of the Court of Directors (a petition submitted by the Court of Directors to the Crown for the introduction of Judicature in India, existing in India Office Records Department, *Correspondence Memoranda*, Vol. 9) compelled the British Crown to grant a Letters Patent, which established three judicatures in Calcutta exercising jurisdiction over the British subjects residing in India, the Indians in employment of the Company and the persons who voluntarily placed themselves under these courts. These courts came into existence by a Charter in 1726, by which the President and Council were declared Justices of the Peace and Commissioners of Oyer and Terminar and Gaol Delivery which were to hold Quarter Sessions. A Mayor and Aldermen were appointed to form Mayor's Court and the President and Council were constituted the Government Court of Record to hear appeals from Mayor's Court.

Mayor's Court was composed of a Mayor and nine Aldermen, seven of whom with Mayor were required to be natural born British subjects, the remaining might be protestants or subjects of any state or Prince in amity with Great Britain. The power of appointment of Mayor and Aldermen was vested in the Governor or President of the Council. According to some historians, Mayor was elected annually by Aldermen from among themselves. The post of Mayor was for life and the President and Council were entitled to remove Mayor or Aldermen upon reasonable grounds. This court was declared to be a Court of Record also and empowered to try and determine all civil suits and actions. It had, too, the authority to grant Probates of Wills and Letters of Administration to the effects of intestates. The court house of the Mayor was situated at Old Court House Street in Calcutta. Mayor's Court, also, had jurisdiction in civil and criminal matters over the Europeans, but with the consent of the parties suits between Indians were

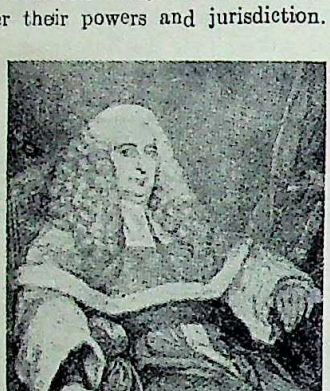
Sir Elijah Impey

allowed to be entertained. Later on, it was decided that Mayor's Court had no jurisdiction over them.

Court of Oyer and Terminar and Gaol Delivery

This court was authorised to hold Quarter Sessions for trial of all criminal offences excepting high treason. (*Oyer and Terminar*, a special commission often issued by the King to certain honest and lawful men directing them to enquire into the truth of some special tresspass or other wrongs of which complaints were made to the Government).

Government Court of Record



The President and Council was a Government Court of Record to which appeals from Mayor's Court were made.

These courts were created ostensibly with a view to check the corruptions that became rampant amongst the Company's officials and to ameliorate the sufferance of the inhabitants of Calcutta from the oppression of the Company's subordinates and other free English merchants. This ended in a fiasco. The inherent defects lying with the constitution of these courts were revealed with their inception. Mayor's Court which

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

owed its origin to, and depended for its very existence upon the President and Council remained a tool in their hands and were constrained reluctantly or wilfully to decide the causes in favour of the parties who appeared before the court with favour and patronage extended by them in clear violation of the existing laws. The result was that disrespect of law and travesty of justice centred round the Mayor's Court. Many queer incidents and anecdotes have been narrated in respect of decisions made and judgments pronounced by Mayor's Court. In addition to these, disputes frequently took place between Mayor's Court and Zamindary Courts over their powers and jurisdiction.

Justice Hyde

To remedy the manifold defects arising out of these courts and of which the high command of the Company had complained, the Charter of Mayor's Court was superseded by a new Charter in 1753, which re-oriented and re-established Mayor's Court again in Calcutta with some amendments. By this new Charter, another court called Court of Request was founded in Calcutta. Both these courts were made subject to a control on the part of the Court of Directors who were empowered to make "bye-laws, rules, ordinances for the good government and regulation of several courts of judicatures established in India."

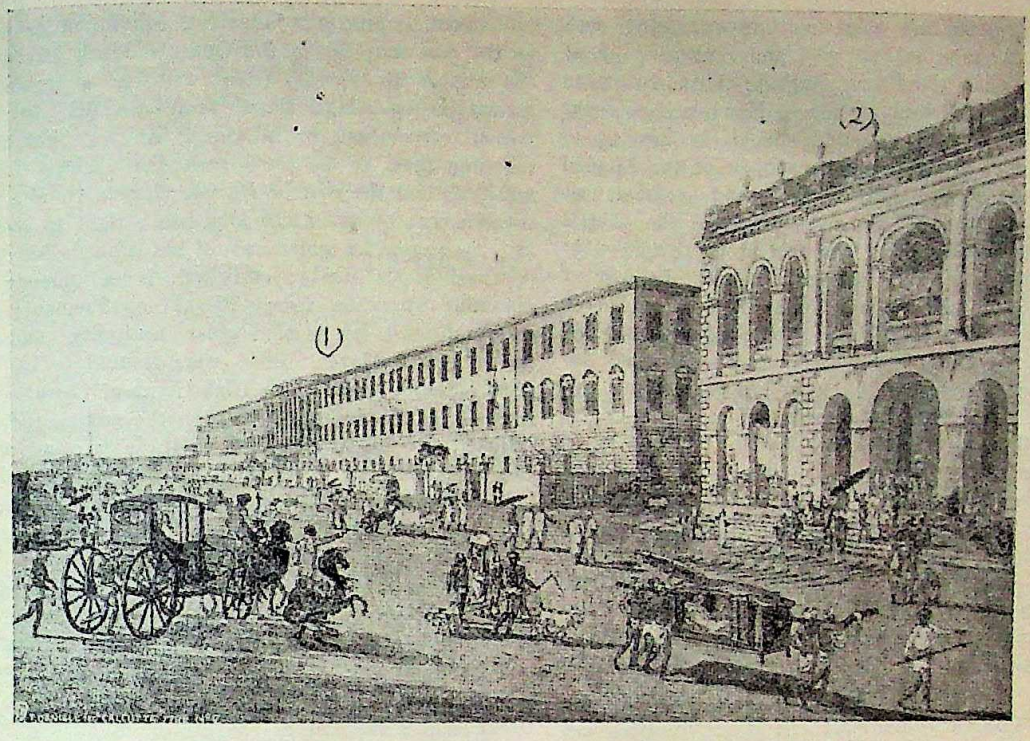
Court of Request

It consisted of 24 Commissioners selected from among the inhabitants of Calcutta. It decided the matter in dispute of a debt which did not exceed 40 shillings. Complaints were heard on every Thursday and three members formed the Bench or Court. Indian residents of Calcutta were first chosen, then European traders only were selected as its members. From this time the Court of Quarter Sessions commenced only to take cognisance of offences accused of high crimes, such as murder and treason.

Supreme Court

After Plassey the Company acquired a large territory and obtained a stronghold in Bengal. Over and above, the position of their created law-courts became more and more anomalous and the effects of a double system of administration, *viz.*, one conducted according to English principles and the other according to existing Muhammedan laws, soon began to manifest themselves. So many courts encountered a great deal of confusion in respect of distribution of justice. All these facts and other factors necessitated in the passing of the Regulating Act in 1773 in the British Parliament by which the Governor-General in Council stepped into the place of the former President in Council, and the select committee and Supreme Court with more elaborate machinery took the place of the older Mayor's Court and other courts. Warren Hastings was appointed the first Governor-General of India.

The Supreme Court that was established in Calcutta by a Charter of 1774 consisted of a Chief Justice and three Puisne Judges. Sir Elijah Impey was appointed the first Chief Justice, other judges being Messrs. Chambers, Hyde and Lemaistre. It held its court in Calcutta and exercised both criminal and civil jujrisdiction there. The clause empowering the British Crown to establish a Supreme Court of Justice by a Charter was unhappily vague and left undefined the field of jurisdiction, the laws to be administered by it and above all the relations between the Supreme Court and the Supreme Council. The Judges of the Court being armed with unsettled extensive civil and criminal jurisdiction arrived in this country with the prejudiced conviction that they had been appointed to put a stop to oppressions which the inhabitants of Bengal, both the English and the subjects of Mughal authority, were undergoing under the accumulated injustice and grinding tyranny of the agents of the Company. They held that they derived their powers and authority from the British Crown and Parliament and were in no way subordinate to the executive head and that they were quite empowered even to arrest the Governor-General and his Counsellors.



Supreme Court *Vs.* Supreme Council

Soon after the inauguration of the inauspicious Supreme Court and the unlucky Supreme Council, they jealously looked upon each other as rivals and the consequences were that judicial and political authorities instead of exercising their powers, independently of each other and for the benefit of the people, were arrayed against each other as two contending parties. Some impression can be formed if Macaulay's diatribe in respect of the whole aspect of the situation is referred to: "No Marhatta invasion had spread through the province such dismay as this inroad of the English lawyers. All the injustices of the former oppressors, Asiatic and European, appeared as a blessing when compared with the justice of the Supreme Court."

The conflict between the Supreme Court and the Supreme Council came to a culminating point in two cases. First in the Patna case 1777-1779, the question at issue was the right of the Supreme Court to try

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Calcutta Street view in 1786, showing (1) Writers' Buildings and (2) the Old Court House where the Mayor's Court and the Supreme Court held their sittings and where the trial of Nandakumar was held

actions of the Indian judicial servants of the Company for acts done in the official capacity. Second was the famous Kasijora case 1779-80 in which the question at issue was whether the Supreme Court had the right to exercise jurisdiction over every one in Bengal, Bihar and Orissa and especially over the Zamindars of the Mughal Emperor.

Undoubtedly, the Regulating Act of 1773 imposed upon the Supreme Court, although in legally vague and insufficiently stringent terms, the task of dealing with the oppression in the executive government of the Company. The Supreme Court was, in fact, to occupy the position of Mayor's Court founded in 1726 and re-instituted in 1753 in Calcutta and its creation was of absolute necessity because of the failure of Mayor's Court to impede the wrong doings on the part of the Company's servants. The institution of this court was, therefore, an act of reformation rather than of innovation. It was, also, not intended to override or to trespass upon the judicatures deriving their authority from the Mughal constitution or to settle the question of Mughal Sovereignty by practically edging it into limbo.

The demonstration of the most ignominious and horrible acts done by the Supreme Court remains incomplete if no reference is made to the epic trial of Maharaja Nandakumar held before it in Calcutta.

Trial of Nandakumar

On March 11, 1775, Maharaja Nandakumar brought against Warren Hastings, the Governor-General, his charge of having received from the Begum of Oudh a bribe of Rs. 3,54,105 for appointing her as guardian of the young Prince. The Supreme Council in which the charge was submitted declared that Hastings had received the sum and ordered him to refund the money to the treasury of the Company. Owing to the dramatic events that followed and precipitated the fall of Nandakumar, the charge was never proceeded with.

On the 6th May, 1775, Nandakumar was committed on a charge of forgery brought against him by Mohon Prosad, the executor of an Indian banker. His trial conducted according to the principles of English Law proceeded from 8th June to 16th June, 1775 before the Supreme Court consisting of Chief Justice Sir Elijah Impey and other three Judges, namely, Chambers, Hyde and Lemaistre aided by a jury of 12 European and Eurasian inhabitants of Calcutta. It is said that the original proceedings of this momentous trial preserved in the Archives of Calcutta High Court have been either lost or destroyed. Nanda Kumar was found guilty on the charge of forgery according to the English Criminal Law, sentenced to death and executed on 5th August, 1775. This wealthy and respectable but unhappy man was put to death nominally for forgery but really for having dared to accuse the Governor-General Warren Hastings of misdeeds done by him.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Leaving aside all other matters connected with this trial, the most salient, vital and cardinal point at issue is that whether English Criminal laws in accordance with which Nandakumar was tried, sentenced and executed should be applied to him, who was a Hindu and a subject of the Mughal Emperor, born at Murshidabad and resident at the time of, and before, and ever since the alleged offence at Calcutta, and was not in the employment or the service of the Company. It must be pointed out that the application of English Common laws and English Criminal laws (and case-decisions and judgment delivered based upon the same laws) to the Indian inhabitants and Mughal subjects of Calcutta, which was not a conquered country and was held neither by cessation nor by conquest but by a particular tenure obtained from the Nawab of Bengal and under the paramount authority of the Mughal Emperor, implies a gross violation of International laws and shakes the very principles of jurisprudence. The King of England possessed absolutely no powers over India, neither legislative nor judiciary, except those derived from the grant of various *Firmans* issued by the Mughal Emperor. Even the *Firman* granted in 1764, expressly stated:

> "The Company must endeavour to drive out our enemies and decide causes agreeably to the rules of Mohamet and laws of our Empire."

The view that the principles of English laws were introduced in Calcutta with the introduction of English Courts by the British Crown overriding the judicial system and Mughal laws long established by Mughal Sovereignty cannot be upheld and maintained. No documents are forthcoming nor any bonafide treaty exists nor written authorities can be quoted nor any "Firman" bears evidence that would support the right of subversion of Mughal Sovereignty by the British Crown and the English Company in respect of legislative and judicial powers over the subjects of the Mughal Emperor in India and over the Indian inhabitants in Calcutta. The arguments advanced by the English lawyers, whether English laws were introduced in Calcutta in 1661 by Letters Patent of Charles II or by Latters Patent of 1725 by which Mayor's Court was established or by Latters Patent of 1753 which reinstituted Mayor's Court, or in 1774 by Charter of the Supreme Court, are unnecessary, irrelevant and carry no weight. So, the arrest, trial and execution of Nandakumar are void, and illegal *ab initio*. Even in recent years before the inauguration of the Republic, the highest prerogative writs of the English common laws, namely, the writ of *Certiorary* (it is a writ where the British Crown would be certified of the record in some inferior courts. In criminal cases writ is issued out of the Crown office. It is directed to the judges or the officers of the inferior courts, ordering them to return the indictment, inquisition, judgment, conviction or order as the case may be to the Queen's Bench Division), the writ of *Mandamus* (this writ is a command issuing in the King's name and directed to any person, corporation, or inferior court of judicature requiring them to do some particular things therein specified) and the writ of *Habeas Corpus* (it is a prerogative writ by which the king has a right to enquire into the causes for which any of his subjects has been deprived of his liberty; this writ is a remedy of obtaining liberation from illegal confinement; this writ in English law is of a great antiquity and was known before Magna Carta) were refused to be applied in many cases by the High Court of Calcutta, the successor of the Supreme Court on the ground that the Indians were not entitled to obtain any relief under English laws, which were not introduced for the Indians in Calcutta. In a well-known case *Girindra* vs. *Birendra* (31, C.W.N. 593) (Girindra, an Indian inhabitant of Calcutta was arrested and detained in prison without trial), the writ of *Habeas Corpus* was not granted by the same High Court upon the same reason. The fact that a conspiracy was hatched between Hastings and Impey is amply reflected in the tempo of events moved from 11th March 1775; this combined with other circumstances resulted in the fall of Nandakumar.

Impey, sitting as a judge put Nandakumar to death unjustly to serve a political purpose and committed a judicial murder and an assassination to ward off his best friend in India. Even Stephen, Impey's strenuous champion, admitted that Impey as a judge had put himself in an invidious position. "Impey forfeited his judicial independence. He exposed himself to a position to which no judge ought to expose himself." He, empowered by the Charter "to reprive and suspend the execution of any capital sentence," had a good and convincing case for the exercise of this discretionary power.

And Hastnigs was without any pity and was relieved of his anxieties when Nandakumar was being removed from his path. In the death of Nandakumar, he found a pillar of opposition uprooted, which stood against his nefarious acts.

Thus, Burke's memorable utterance, "Nandakumar was murdered by Hastings by the hands of Impey," will never be wiped out from the pages of Indian History for thousands of years to come. The awful injustice committed in the death of Nandakumar stands unparalleled, unexampled and sacrilegious in the history of the English judiciary in India.

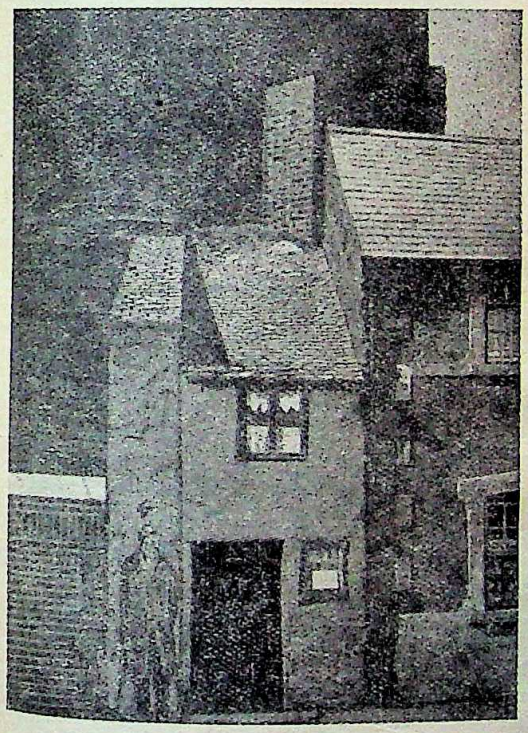
Both of them had to pay the highest penalty for their acts done in India afterwards. Impey was impeached before the House of Lords by Sir Gilbert Elliot in 1787 for the trial of Nandakumar, and the impeachment of Warren Hastings took place from 1788 to 1795.

The terrific acts of the Supreme Court and the

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

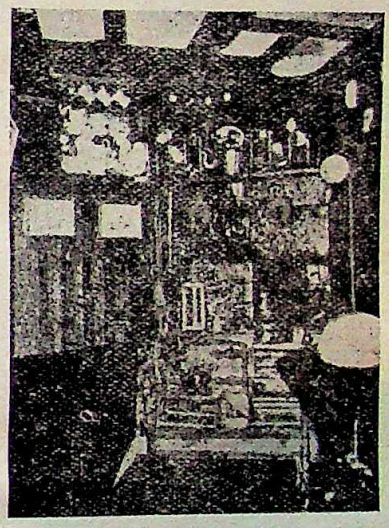
Council worried the Company and the Crown as a result of which the constitution of the Supreme Court was amended. The important provisions were that the Governor-General in Council were not subject to the Supreme Court for anything ordered and done by them in their official capacity, and no Indian was liable to the Court's jurisdiction being a land-holder or a farmer of rent. The Court with these provisions was given a jurisdiction over all British inhabitants of Calcutta and Hindu and Muhammedan laws were to be administered by the Court in cases of inheritance, contract and succession.



Thus, ended a short history of the English Judiciary in Calcutta during the 18th Century.

———:O:———

A CORNER OF WALES



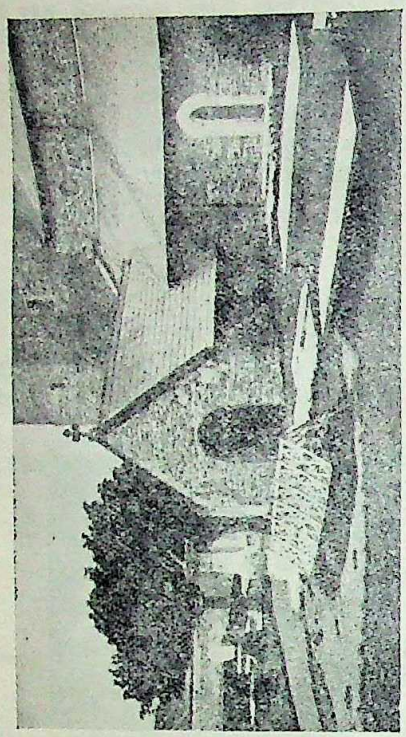
By ADINATH SEN, M.A., B.SC. (Glas.), M.I.E. (India)

"We are seven," insisted the simple child, in response to the query, "Brothers and sisters how many are you?", counting those lying in graves in the churchyard. The little graves in Conway, North of Wales, were the inspiration of Wordsworth's famous piece of poetry. Conway also boasts of the smallest house in

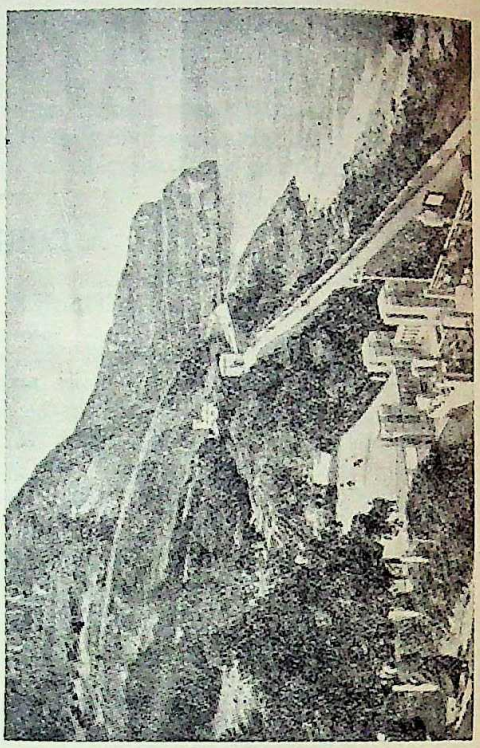
The smallest house in Great Britain, Conway

Great Britain with its kitchen and bedroom, with a frontage of 72 inches, depth of 100 inches and height of 122 inches. The Conway river, in beautiful surroundings, is crossed by a tubular and a suspension bridge, leading to an imposing Castle of old times. To the East of Conway, there are popular seaside resorts, promenades, piers, and marine-drives: Rhyl at 15 miles, Colwyn Bay at 6 miles and Landudno at 4 miles from Conway. The last is on an Isthmus with two sea-fronts, and a remarkable drive round Great Orme starts from the Happy Valley Rock Gardens,

The smallest house in Great Britain: Kitchen



The smallest house in Great Britain: Bedroom



which has perhaps suggested the name of the well-known Tea-garden at Darjeeling, as in many similar examples in the country.

Carnarvon Castle

To the West, at 14 miles from Conway, is Bangor at the entrance to the Menai Straits between the island of Anglesey and Wales at its north-west corner. The island looks like a man's head with a crest and bares the name of Cape Holy Head, learnt in our school days. Bangor possesses a Cathedral and a University and is the same as mentioned in the popular comic song. "Riding down from Bangor, on an Eastern train," and there are tunnels on this Eastern Line. Near the other extremity of the Straits, lies the imposing Castle of Carnarvon, biggest in the U. K. It dates from the time of Edward I, and is also the best preserved in the country.

Inland lies the Snowdon Mountains, the highest in Wales, scalable by a mountain Railway with roads and passes round about it from which excellent views are obtained of the mountain. Beautiful lakes abound in the vicinity. There are two at Lanberry, on one of which are the slate quarries, from which the best slates in the world are carried by one of the smallest trains in the world of 15 inches gauge to Portmadoc on the Southern coast, to be shipped round the world. Within a short distance from the Port, lies beautiful Criccieth,

Llanrwst, a Welsh village

Bangor from across the Menai Strait

the Welsh home of Lloyd George. Towards North of Snowdon, there are twin lakes of Capel Craig, from which Snowdon is viewed with great advantage. Further North is the famous village, Betsyceed, at the junction of three rivers with falls and glens, appreciated by visitors and made famous by poets.

Boundary lines between countries have become a disturbing feature of late. A river, a ridge, or an unseen parallel may indicate a boundary, but proceeding from England to Wales, when you come across signposts like Bwlch, or villages like Llanrwst, where vowels become scarce, you may be sure that England has been left behind. Names become jaw-breaking as well as long, until in the limit, there is the longest place-

The fairy glen of Bettsyceed at the junction of three rivers

name in the world, of 58 letters but few vowels. A girl pronounces the name to visitors in one breath, by which feat, she makes a living from small tips. If in addition to the above complications, 'l' is to be pronounced as 'f' to start with, one is left to wonder, whether a stammerer first tried to utter the word and it was transcribed as uttered.

HE CHOSE TO BE AN ARTIST

By D. P. ROY CHOWDHURY

It was a catastrophe. This is how it happened. Kalapati got entangled into a queer situation that gave him the impetus to believe that he could paint pictures and shape clay to his heart's desire. There could be no dispute over the conviction, for the simple reason that his works were never allowed to be examined by real experts. The experts took immense delight in damaging an individual's sincerity. It was their profession, if not religion.

Sincerity in art or every-day life as Kalapati puts it, is the ideal for a greater existence and he lived for it. In the circumstances he had no other alternative than to keep the vicious rather dictatorial elements at a distance. This was the wisest thing that he could do to save his soft heart, which was easily susceptible to the reactions of painful observations. The principle of self-preservation implemented in practice proved to be very sound for imparting confidence and creative inspirations.

Temperamentally bent as he was, a suitable cultural environment was an urgent need. He was restless to settle down to work. His hands itched to fondle with clay. The lure of close contact with the supple medium became irresistible because it submitted to his will and took some form or other with the lightest touch of his fingers. Helpful accidents procured in this manner rendered amazing service to originality. But colour behaved in an obstinate manner. In consequence of which, he resorted to what he calls dashing strokes. The technique improvised by him might mean nothing to stagnant academic conventionalists, but it revealed purity of purpose if one could extend a sympathetic attitude towards its significance, standing as it did for sincerity and nothing but sincerity. Mind and hand being thus ready, his tense urge for creation could not be kept in suspense.

He made up his mind and went to Podahatt, a place situated on a low plateau commanding a panoramic view of a vast sheet of land, all barren. Here was founded the famous university of his dream. It was indeed a temple of peace where all sorts of creative activities worked in harmony with the minimum of toil.

The landscape stripped of its vegetation offered an intriguing fascination to Kalapati. Probably it was due to the fact that strong affinity of character existed between the spirit of the landscape and the soul of the artist.

As ill-luck would have it, the authorities of the university sooner discovered the genius in him, than he ever expected, with the result he was placed on a plane which demanded respect. He was chosen to be a teacher. So he discarded the humiliating students' life for good. The distinction thus gained had to be disclosed to Krishna, known as the sly fox who did not think much of Kalapati. Kalapati had no intention to tax his patience and wait for a chance meeting, so an express invitation, if not a challenge, was sent to Krishna to see for himself what Kalapati was worth. The invitation was accepted.

Tea was over. The time by now had leaned towards dusk. Cool and gentle breeze had created a congenial atmosphere for intellectual discourse. Kalapati opened the topic:

Dear Friends! I must tell you what I had been thinking for some time. You ought to know that I have decided to declare myself as an artist.

Krishna, the sly fox: A noble idea indeed! But what was the provocation that landed you in such a mess?

Kalapati: Your remark is aggravating. I want you to realise that every man in the street cannot be an artist unless he has the gift.

The sly fox: A gift! And who the devil carries coal to Newcastle? You don't need any support to achieve your ambition.

Kalapati: You cannot dismiss my good intention so lightly as that. I can tell you, I have made no attempt to crack a joke.

The sly fox: That is why I am worried.

Kalapati: I worried on account of the cause that helps one to raise from sordid realities to the realm of dream, from the matter-of-fact obvious to the spiritual sphere.

The sly fox: My dear old thing, what you are not considering, is my misery following on account of your solemn declaration.

Kalapati: You anticipate trouble on account of my pursuing art, how do you mean?

The sly fox: It is like this. I being an intimate friend of yours, my knowledge of you and your blessed art is expected to be reliable. As such, no one can tell when I shall be called to write an article on you.

Kalapati: Suppose I myself request you to do so?

The sly fox: You are a clever fellow, aren't you? I never could imagine my unguarded suggestion will be taken [illegible] However, I am afraid, I

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

have to deny myself the privilege as my intellect is not so sturdy as to stand the strain. An article on you means courting a wordy battle right in the front line.

Rama, the Mediator: That is exactly what we expect you to do. The country is passing through an unusual crisis. Devastating poverty of culture has engulfed us. Something drastic has to be done quickly to save the people from impending calamity.

The sly fox: That is not the correct position. Things are moving faster than you can imagine. With the acceleration of speed on cultural wheels, art is dumped on everybody in the street. There is no time to choose and find the needy soul. Aesthetic consciuosness has been roused to such a feverish degree that the cinema world is finding it difficult to retain the artists within its fold. They are assuming the stature of mobile stars and are being rushed to heaven, leave alone the unwarranted intrusion into space without any passport. Innocent village-folk are being educated to wait in deputation for the recognition of their indigenous art. What do you think has come out of the manoeuvre? Smart distempered walls in great cities are being covered up by pure cow-dung coats to create the illusion of a mud wall. The purpose behind this novel decoration is to give a grand reception to *pata chitras* in their own environment. Stink is substituted for sweet odour. Taking things as they are, I see no prospect of a shelter to my utter ignorance, in case I comply with your request.

The Mediator: But I see you are quite good at speech and you mean to say you dare not write, even if you were assured of a good supply of quotations from great authorities. They are the best protections against any controversial opinion. Don't you agree?

Balu, the Trumpeteer of Podahatt: You live in a civilized world. Have you not heard of such a thing as propaganda? We consider it as a branch of fine art. Therefore, a precise knowledge in any particular direction is not so much a criterion as is an artful progress to meet our objective.

The Mediator: It is not difficult to substantiate the view of Balu. Many religions and innumerable gods would not have had a hold on the cosmos if their respective prophets did not canvas for an unreserved mass support.

Balu, the Trumpeteer: There you are! The majority of followers of faith are either made to order or by propaganda. Hence there is no room to think of diffidence. Decide now and once for all that we shall launch a vigorous struggle for a fuller life. Our art must thrive.

The sly fox: That is where you get me into the soup. I am no good for struggle either. My attempt to improve myself will dissolve the whole thing into a chaos.

The Mediator: There is no failure for a determined will. We have the living example here. Look at Kalapati. He decided to be an artist and he is now an Art Master.

The sly fox: Let me understand you. What you are pressing for is that I should present myself as a self-constituted leader and then proceed to find out whether I am accepted as such or not. Isn't it what you are aiming at?

The Mediator: Everything is fair in love and war. So is it in propaganda. Your success will depend on how you concentrate your energy on this point.

The sly fox: You have made things clear, now I surrender to the majority of votes. Take my word, I shall write but which is the journal that will publish an article by a novice? I have some respect for modesty, my conscience will not permit me to proceed unless I have confessed my diffidence.

The Trumpeteer: No, no, no. That would be suicidal. You cannot do that. You cannot escape from your commitment, nor can you drag in conditions at this stage. Take it from me that the average man in the street including quite a number of the educated from common universities expect nothing more than flowery phrases and idioms that produce a knowledgeable effect.

The Mediator: I have a bit of advice. Keep in mind that the more obtruse the theme the better the result. People are poverty-stricken, they are hungry; they take anything for food. As such, we need not extend our responsibility to their digestive faculty.

The Trumpeteer: My friend is perfectly right. The article that we want must be charged with assertive conviction but it should be equally good for a gallant retreat. Take caution to see that no room is given for a quarrel or objection even when you are most aggressive. This is where tact is put to severe test and we know you will rise equal to the occasion.

The sly fox: Now Kalapati must add some points on his prostration. I beg your pardon, I meant posterity.

Kalapati: Are you sure you did not use the expression without any intention?

The sly fox: (aside) I never could persuade myself to believe that a fool can understand his inherent quality when told.

Kalapati: What are you muttering? I think I have caught you right.

The sly fox: So you have. I admit the credit is yours. However, I am going to adjust. Now come with your points.

Kalapati: You see my thoughts work in a peculiar manner. I think too deep but when I try to express in words they get either confused or completely lost.

The sly fox: Why do you think then at all?

Kalapati: I cannot help it. Thoughts are my only companions.

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

The sly fox: Excuse my inquisitiveness, how do you get a constant supply and what are the sources? I need these points for the article.

Kalapati: It is difficult to make you see how an artist observes an object of beauty and gets inspired to interpret his feelings or thoughts. Forms of beauty can be seen everywhere but it needs a gift to pick them up. Here the philistine is handicapped. He is immune from any reaction that the contact of a beautiful thing can produce. He never feels sorry if the melody of good music does not enter into his ears.

The sly fox: Great news. What made you step into this branch of art also and what style or *raga* or *ragini* takes you away from sordid reality to the land of your dream.

Kalapati: Of course, the simple folk-song.

The sly fox: They say simplicity in art or intellectual expression is only a concentrated form of great complications. The result is merely a concealment of difficulties overcome. Hence folk-art cannot be simple but it is in an undeveloped stage on account of the sentimental watchdogs who deny with vengeance any progressive outlook. I call it crude.

Kalapati: You have fallen in line with the sophisticated. You are a bourgeois. You are just a few and your days are gone. Folk-song is the art of the people who make the earth fertile, who give life to every bit of thing they touch, who feed millions by their hard toil. Therefore, the music that is expected to echo in the heart can never be your pet classical stuff, those *ragas* and *raginis*.

The Trumpeteer: One needs strong nerves to withstand the shocks on account of its ferocious character. As a matter of fact the demonstration of your so-called higher music appears to be more a wrestling about than anything near music. It is all mechanical and completely devoid of sentiment.

The sly fox: You want me to understand that sentiment rules out all other aspects of artistic expression.

Kalapati: To me art is objective. Therefore, its highest purpose is served when sentiments are recorded in the right manner.

The sly fox: What is this right manner again? You seem to have an inexhaustible stock of wits.

Kalapati: Your manner of questioning is too assuming. Look, the reaction has already begun. I am going to swoon.

The sly fox: I am afraid you will have to drop the idea for the present. I am quite prepared to relieve you of the inconvenience I have caused unwittingly, provided you keep your art aloof from this sort of inspiration. It is a disturbing factor to my loyalty. I have given my pledge to write an article. Mind that?

Kalapati: I am sorry to have disturbed you. I am trying to get possessed of myself. Please do not leave me alone. You are the only person who can convey my message to suffering humanity. The innocent people have been victims of the vicious dictators. The poor fellows are penalised to accept vulgar imitation of nature as art. Oh! I can imagine what an agony it is to live with such naked facts of reality.

The sly fox: It looks as if you have almost got me into your shoes. Now, then, how do you want me to convey your message?

Kalapati: You have to penetrate your vision into the depths of my thoughts, which my works will reveal. There is always an inner meaning behind the surface. It needs a little sympathy—a little patience—a little consideration to overlook certain handicaps.

The sly fox: Handicap! for you? It is absurd, or it must be a confession.

Kalapati: No, it is really a confusion, it is always alert to let me down whenever I try to explain in words. You know speech is not my medium.

The sly fox: Let us then proceed with the medium where you would feel at home.

Kalapati: I am grateful for your change of heart. I am sure you have seen my recent pictures, at least their reproductions. Let me begin with the "Folk-dance." An honest scrutiny will disclose how I have got the spirit of the environment of simple life of the people.

The sly fox: But simple life of the people does not necessarily provide a possibility of a simple treatment in the picture. Does it?

Kalapati: Of course, it does. The subject has a lot to do with the objective and to fit in with the subject I had to evolve a new technique which is free from any academic influence. To enlighten you on the point I should stress upon the fact that we never attempt to draw just what we see, but our impressions are recorded through an intellectual vision.

The sly fox: The vision as you describe it, is only an exercise of a prolonged memory of what you had seen and that which is forgotten is gloriously protected by such high-level words as elimination, sublimation and all the rest of nonsense.

Kalapati: In a round about way you are saying that the method of recording our expressions is not different from what is done in other institutions.

The sly fox: If I have to keep my conscience clear of an immoral act then I must say there is no difference, and if there be any, then it is a privilege to tell what is not true.

Kalapati: Oh God! The chaos is heading for a successful end!

The sly fox: Let me save you from the apprehension by coming back to your "Folk-dance." I presume you are aware of the fact that my knowledge of the art of dancing is nil. As such, I see in the picture nothing else but two persons pulling a Christmas cracker and you made them exert more energy than

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

was necessary. Besides, they have been deprived of a festive mood, too, on account of the scanty dress you have provided. A few dabs of colour might have given a gay appearance and saved the situation.

Kalapati: But colours have a tendency to scream.

The sly fox: Not when you know how to humour them. You have touched the limit. Now let me add my conclusive remark. The whole of the project has gone through a loss of balance, so have you. It is an unpardonable performance for an artist who means to be serious and knows better.

The Trumpeteer: It would be a tragedy if your views were confirmed.

The Mediator: The sly fox has done nothing else than that.

Kalapati: If that be the truth, I feel no good purpose will be served by an article from your pen.

The sly fox: I am pledged to write. My honour is at stake. Aren't you going to respect the word of a gentleman?

The Trumpeteer: A gentleman is born, Sir, and not made at other's cost.

The sly fox: So is an Artist!

GEMS FROM GURU NANAK'S SONG DIVINE, "JAPJI"

By Prof. BALWANT SINGH, M.A.

He is One, the Eternal One,
Life of life and life in all
All that is doth come from Him,
All that is doth live in Him,
All that is doth merge in Him,
He was, is and ever shall be.

* * *

How to be at-one with Him?
Resign thyself to Will Divine.
His the Will that reigns Supreme,
We cannot force our will on Him.

* * *

'I-ness' is the veil that hides
Face of God from human eye.

* * *

He gives to all and never tires,
We have our fill and yet He gives!
Oh, the Giver who ever gives!
What must we do to earn the Bliss?
Glorify the Giver great
In the morning, ambrosial morn.

* * *

He dwells in all, abides in all,
Let this thought abide with thee.
Attune thyself to Heaven's Will,
Walk with God in all thy deeds.

* * *

Soap and water wash the filth
Of hands, and feet and clothes we wear,
Walk with God to wash thy sins,
Live in God to cleanse thyself,
This the way, the only way
To peace and bliss and life Divine.

* * *

In within the sacred shrine
Of the heart and soul of Man,
Is the sacred seat of God,
Seek thy Heaven in within,
Let the soul unite with Him.

Upper worlds and nether worlds
Countless are they all, indeed.
Does the Bull support the Earth?
Then who supports the countless worlds?

* * *

He is Truth and Bliss and Beauty
(And we call him Sachdanand.)

* * *

Conquer self and love of Self,
And you conquer all the world.

* * *

Creation all a song of praise
To the Author of Creation.
All the human race that is
With many creeds, is one in fact,
All of us are linked and kin
Our humanhood our common bond.

* * *

Be thou chaste in thought and deed.
To bear and forbear all,
Let Reason be thy light of life
And inner Light thy constant guide,
Fear of God and life austere
Ever keep and hold them dear,
Let love of God and love of Man
Be the nectar sweet of life,
Live in God and love Him ever,
By His Grace thou wilt be saved.

* * *

The air is the eternal Ground,
Giving life, like God Himself,
Like a father is the water,
And the earth is mother-like,
Day and night are nurses two
In their lap doth man abide,
They that live in God are saved,
Saving hosts of others, too.

RELIGION OF GURU NANAK

By SARDAR SARDUL SINGH CAVEESHAR

History tells us how political boundaries that circumscribed a family or a tribe, a district or a province, fell down one by one. We do not now hear much of tribes and districts as politically independent units; we only talk of nations and countries when we talk of the various political sections of humanity. The next step in political progress will be the levelling down of national landmarks and the establishment of an international commonwealth. The formation of the League of Nations and of the United Nations Organisation point to that direction. Much of the political unity has been brought about by the mechanical devices introduced in the system of communications; distances have been annihilated bringing nations and countries near to each other as never before.

Similar is the tendency in the sphere of religion. We have advanced from tribal religions to regional and national religions, and from national religions to international religions, and from international religions to common religious platforms meant to bring together all the various religions of the world.

We have still the example of tribal religions in the backward tracts of Asia, Africa and Australia. Regional and national religions are represented by Judaism, Hinduism and Zoroastrianism. Islam, Buddhism and Christianity are the examples of international religions which have levelled down the boundaries of nations and countries. Historically the next step is bound to be, on the example of the League of Nations and the United Nations Organisation, a common religious platform for all the religions of the world.

Guru Nanak was the first earnest religious thinker who put before the world the idea of having a universal religion based on the conception of Fatherhood of God and Brotherhood of Mankind. He deliberately laid the foundations of a movement that was to unite the whole of humanity on these two fundamentals, whatever opinions or prejudices people in general may have, on accoont of inherited traditions or physical environments, or other religious or philosophic ideas.

It was later that desire for propaganda and also as a reply to the religious persecution by the fanatic rulers of the day, turned the Sikhs into a well-defined, compact community, distinguishing it from those around them. But all this was an after-growth. The real purpose for which Guru Nanak and his successors worked was the historical necessity of bringing on the question of religion the whole of mankind on one common platform without any distinction of creed or religion.

Guru Nanak was pre-eminently the prophet of unity and peace. His efforts at creating an atmosphere for world reconciliation and world unity were far in advance of the age in which he lived. He is generally regarded as a religious reformer. No doubt, the reforms introduced by him in the sphere of religion were of great importance, but his contribution to unity and toleration in the world of religion was of even greater importance.

Guru Nanak did not want to convert persons from one religion to the other. He wanted Hindus and Moslems to be true to their religion. At the same time he wanted to establish a brotherhood common to all religions for the worship of God and the service of mankind. He wanted all those who believed in God and His worship in the service of mankind to come together. stand on one common platform, and help each other by their experience and achievements.

The word Sikh is from Sanskrit *Shish*, meaning disciple or learner. In Sikh vocabularly it means a person whose mental and spiritual attitude towords the world is ever that of a student; ever open-minded, ever ready to learn and improve.

The idea of discipleship is as old as religion or even learning itself. But it was reserved for Guru Nanak and the other Sikh Gurus to make a religion of it. It is the contribution of the Sikh Gurus to the history of human thought and religious ideas that it is the primary and most sacred duty of man to be ever vigilant and in a receptive mood to learn and imbibe from all quarters what is best spiritually, morally, mentally and physically. And this spirit is not to be a sort of grace or a side-accompishment; it was to be man's main and only goal on earth.

Every earnest person is a learner or disciple all his life. He is to learn of truth from every source. He is to join and work together with all those, of whatever creed or race, who are in search of divine truth and divine love. Sikhism, the religion of the disciples, is thus a platform for all those who were learners, who were seekers after truth. Let them be Hindus, Moslems, Christians, Buddhists, Jews or Zoroastrians, Sikhism was to be the link that joined them together in their search for truth a sort of fraternity or religious guild established for the promotion of love of God and service of mankind.

It was, indeed, fortunate that Guru Nanak was born in a country and at a time well suited for general rapprochement between classes and creeds, between countries and nations. At the end of the fifteenth century India was politically quite a weak unit. But her very weakness was a blessing in disguise as it made her a centre and meeting-place of almost all the great cultures and nations of the world. It was here in India that the three great civilizations which had at the time all the world under their sway met on a common platform. The Hindu culture had given birth to Brahmanism, Jainism, and Buddhism; the Hebrew civilisation was at the base of Judaism, Christianity and Islam. In the sixteenth century, under the great Mughals, both the streams met

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

on the plains of the Indus and the Ganges to come to terms with each other and enrich the Indian soil with their union. To these two cultures was added the Greek culture through the Persian Shias and South Indian Christians. Thus it was in India that East and West met to merge their individuality into a united common goal.

This effort at unity was not superficial. We have only to look to the religious discussions held in the court of Akbar the Great, to realise its seriousness and inner significance. There was no important religion or sect, eastern or western, that was not represented at the debates in the *Ibadat Khana,* the Hall of Worship, at Fatehpur Sikri. And the discussions were held, not as an intellectual pastime, but with a view that a common religion and a common culture, based on all the religions and cultures of the world, might be evolved as a definite result.

There was to be found in the India of the Mughals a clash of ideas, a clash of cultures and a clash of races. But the world cannot be welded into one organic whole without a common beating-ground somewhere, without a rubbing-off of angularities in some convenient place. There was no country in the world better suited for this purpose than the India of the Mughals.

Guru Nanak saw the true significance of the religious conflict that raged around him. Fanaticism, mis-called religion, was at the bottom of the whole trouble. He raised his voice against it and resolved to fight it out. He was not against any religion; he did not criticise any faith; but he was strong in his invectives against religions and faiths warring against each other on account of local prejudices and general ignorance. He believed in worship and prayer, but he was against the mere forms of religion that had no life. Buddhism or Brahmanism, Christianity or Islam, were not good or bad in themselves; it was those who followed these religions that made them good or bad. Buddhists or Hindus, Christians or Moslems, were to be praised or blamed for what they were worth, for what they did for mankind. Not belief and profession, but life and action were regarded by him as high or low, good or bad. His universal religion was based on universal love and universal faith. It was beyond the limits of warring faiths and sects, beyond the limits of dogmas and creeds.

To what particular faith a person belonged was immaterial for Guru Nanak; he wanted only to know how one conducted oneself in one's dealings with others. He preached that the whole of the human race should have one common religion. That religion was not to be this creed or that creed; it transcended all religious prejudices and sectarian antagonism. The whole of the human race was to be brought within one common fold, not by converting men of one religion to another, but by following what was true and good in all the religions and faiths.

It was not surprising that when Guru Nanak passed away, no one could say what religion he professed. Hindus wanted to cremate his body according to their custom; while the Moslems were anxious to bury it according to their own law and usage. Even today those who study his teachings cannot definitely say to what particular religion he belonged. In the second decade of the present century, in a session of the Punjab Historical Society, a Sikh gentleman, Sardar Joginder Singh of Aira, read a paper on the life and teachings of Guru Nanak. The meeting was held at Simla and was attended by Hindus, Sikhs, Christians and Moslems alike. After the lecture was over, a Hindu leader of repute, Lala Ram Saran Das of Lahore, stood up and said that the speaker was wrong in not mentioning that Guru Nanak was a Hindu reformer. A Moslem aristocrat, Sir Zulfiqar Ali of Maler Kotla, retorted that the Hindu gentleman was wrong in calling Nanak a Hindu: the Guru in his opinion, was a Moslem. Sir Michael O'Dwyer, who presided over the meeting, in summing up the proceedings said that both the gentlemen were wrong; as far as he could judge, Guru Nanak was a Christian.

The controversy as regards Guru Nanak's religion will continue as long as we do not change our viewpoint to understand the great teacher. In him every one could find what was best in one's religion; the Guru's religion was the religion of humanity; it encompassed all the true faiths in its sacred fold.

As the new religion was born of the impact of East and West; it was consdiered pre-eminently fit to be the future religion of the world; it was considered specially suited to India because a Sikh meant to be a reformed Hindu and a reformed Moslem. In the beginning both the Hindus and the Moslems took part in propagating its teaching as if it was their own religion. Guru Nanak laid the foundations of the Sikh Religion as a universal religion. By simplifying religion and basing it on universal principles of Love of God, Love of Humanity, and earnestness at self-development and self-culture, he put before the world an ideal which he thought must be followed by the whole of humanity for world peace and world happiness.

Guru Arjan, the fifth Guru of the Sikhs, and the compiler of the Sikh Scriptures, was once asked what was the best religion of the world. His reply was :

Sarb dharam men sresht-dharam
Har Ka Nam jap nirmal Karam.

"The best of all the religions was the religion of Love of God and of Righteous Action."

Sikhism, the religion of the Sikh Gurus, is an interpretation of this pious and practical formula. Man must love God and base all his actions on this Love. Love of God is the first necessity of man's life, but this love must make him a man of action. Not asceticism but active life, life of righteous action is to be the guiding principle of all his activities.

It was believed, and it is sometimes still believed, that love of God and love of the world do not go together. Sikhism was a reply to this old objection. A Sikh was to be both a *Bhakta,* a man of devotion to God; and a hero, the man of action. He was to be both a soldier and a

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

saint. The more the love of God in one's heart the more one was to serve the world with righteous action.

According to the Sikh Gurus, it was these two principles, the love of God and the love of mankind through righteous action, that could end the whole strife of creeds and religions, of nations and races, of man and man, that formed such an ugly chapter in the history of human race.

It has often been said that the Sikh Gurus were followers of Vedantism as expounded in the Upanishads. The language, similes and metaphors used by the Gurus to explain their meaning sometimes lend colour to this theory. The similarity is indeed striking. But it is only a superficial or cursory knowledge of the Sikh Scriptures that could support such a view. Vedantism is a plastic doctrine and means so many things to so many people. Its different schools are a testimony to its fluid and indefinite import. Similarly Upanishads on which Vedantism is often based are a vast forest of very luxuriant growth. You can find in about two hundred current Upanishads, some of them are of quite recent date, theories and problems quite opposed to each other. It is not far from truth when one says that in the Upanishads you can find anything and everything in the matter of religious and philosophic doctrine. You have there montheism, monism, deism, dualism, pantheism, idolatry, ritualism, formalism, asceticism, all running riot in close proximity. That certainly is not the case with the Sikh Scriptures. There you have a difinite doctrine and a definite path to follow, though you can plausibly say that it is generally in accord with much of what one finds in some of the best Upanishads and in the writings of some of the most practical Vedantists.

Similarly it has been suggested very seriously by some that Sikhism is nothing more than a reproduction of Islamic Sufi doctrines in the Indian garb, and by others, though not so seriously, that Sikhism is an acho of Buddhism and of Christianity. Ideas and words from the Sikh Scriptures can be put forward to support these views to some extent. But all this cannot show anything more than this that religious thinkers all the world over have often thought alike and sometimes used the same arguments and the same words to express ideas common to all of them. Guru Nanak and his successors had difinite ideas of their own about God, Creation, Man and his conduct in life. These ideas were not new-fangled, though as a composite picture, they had the distinction of being fresh and original. These ideas being similar here and there with those of this or that great religious thinker, shows their catholicity and lends them a universal appeal, but the line and path chalked out by the Sikh Gurus were their own , and in their final and perfected form owed their origin to none else but to the Sikh Teachers themselves.

Sikhism had its birth in the reform movements that sprang up in the Hindu Society in the 15th and the 16th centuries. On one side it eschewed Hindu polytheism, formalism, priest-craft, and caste; at the same time, on the other side, it carried forward Hindu catholicity and tolerance to a wider shphere of influence, making an Indian religion fit for the whole of mankind.

Similarly, Sikhism was born under the new influence that Islam brought to India. As reformed Mohammadanism, Sikhism on one side discouraged its Arabian prejudices and intolerance, and on the other it acclimatised Islamic monotheism and puritanical life to the Indian soil.

Guru Nanak always spoke with the people in their own tongue, in the language and about ideas which were easily comprehensible to those who came into touch with him. With the Yogis he spoke about Yoga, with the Moslems about Islam and with the Brahamans about the Brahmanical creed. His main idea was to teach people the religion of love of God and service of mankind. For this he would draw upon the religious ideas of those very persons who formed his audience. He would condemn outward forms that killed the spirit of religion and ask the people to follow the truth that lay behind these forms and rites. It was immaterial for him to which religion one belonged; it was not necessary for him to subscribe to the theories and principles underlying the beliefs of those who listened to him. He used these to serve his own purpose so that those who came to him may be able to understand him best, according to their own light and learning.

The Sikh Gurus gave a new spiritual turn to old ideas which had outgrown their spiritual utility. The emphasis on the fundamentals of religions was quite their own as was their courage in condemning what was corroding and corrupt. It was for this reason that Guru Nanak and those who followed him were often called by fanatics *Kurahyas*, or heretics.

Perhaps it is possible to show that every important principle enunciated by the Sikh Gurus had its precedent in some previous Hindu, Buddhistic, Moslem or even Christian doctrine. But Sikhism, evidently, in its final form has its own individuality and catholicity marking it out as a distinct creed, having a distinct place in the evolution of religious creed, a distinct place in the evolution of religious thought. The main principles of Sikh Religion, Fatherhood of God and Brotherhood of Mankind, Unity of the Individual Soul with the Universal Soul, Immanence of the Transcendental Reality in the Universe of phenomena, the importance of leading an active but detatched life, the recognition of basic unity of all creeds, find support from all what is best in the old Vedic and the new Sufi literature. But religious history clearly shows that the Hindu and Moslem ideas were overlaid with so many superstitious and corrupt ideas, that the popular Hindu and Moslem mind seemed to have almost forgotten the real truth and attached itself to ideas and forms against which devout and intelligent Hindu and Moslems could not help feeling disgust and revolt.

For re-teaching the gospel of universal brotherhood a new prophet and a new hero was necessary. Guru Nanank and Guru Govind Singh eminently fulfilled that

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

position. They put before the world ideals in thought and action that could bring the whole of mankind on one common platform for its uplift and regeneration.

The ancient seers of India who expressed their ideas in Upanishads in their highest moments of light and inspiration, evolved the idea that God was in all and all were in God, and that the best minds all over the world thought alike in matters spiritual and divine. But these were ideas reserved for the sage and the philosopher and had currency only in the hermitage and cloister. It was Guru Nanak and other teachers of the Bhakta or Mystic School, who brought out this idea from the seclusion of the forests and academies to every one's hearth and home. What was formerly the property of a few gifted persons was now made available in popular language which every body could understand and make use of in his daily life. Spiritual truths which were regarded as secrets for the select few were now required to be practised in daily life by the prince and the peasant, by the artist and the artisan, by the soldier and the merchant alike.

BOOK REVIEWS

Books in the principal European and Indian languages are reviewed in *The Modern Review*. But reviews of all books sent cannot be guaranteed. Newspapers, periodicals, school and college text-books, pamphlets, reprints of magazine articles, addresses, etc., are not noticed. The receipt of books received for review cannot be acknowledged, nor can any enquiries relating thereto answered. No criticism of book-reviews and notices is published.

EDITOR, *The Modern Review*.

ENGLISH

OUT OF MY LATER YEARS: *By Albert Einstein. Philosophical Library, New York. Price $4.75.*

Had Einstein been only a great scientist of the age, his name and fame would have remained confined within the intellectual circle of the world and common man would have known little about him and his achievements. But as a matter of fact in whichever sphere his name is uttered it spontaneously arouses a feeling of reverence in the minds of the listeners. The secret of it lies not in the brilliant intellectual performances of the *scientist* Einstein but in the intensely sincere appeals for justice and humanitarianism of the *man* Einstein.

All through the essays, except in those devoted to the presentation of his theory of relativity, the cry of the anguished soul finds expression. The devastation wrought by war, the cruelties performed on man by man, the crumbling down of all values, have stirred Einstein's soul to its very depths. Has he become embittered? Definitely not. Has he become despondent? Far from it. He himself has not escaped suffering. But he has no grudge. On the contrary, he points out the sources from which the evil has inevitably come down upon humanity and shows the way to all how the evil can be prevented in the future. He addresses the intelligentsia, calls upon the youth, to change their ways of thinking and modes of behaviour. Scientific knowledge should be utilised for social purposes and moral regeneration. Values must be re-established. It is through united efforts of all thinking men that such changes in outlook can be brought about. He asks the Jews, though they have suffered perhaps the most, not to lose heart. They have suffered before but they have survived, and so will they again. All the political, social and educational views that he has formulated in these essays are based essentially on his serene faith in man and on moral values.

There are brief appreciative sketches of some eminent men and women of the day including one on Mahatma Gandhi. Those wishing to sense the full grandeur of the sentiments and depth of the thoughts expressed must read and re-read the essays. A few quotations are given below:

"Let us think, feel and act like this man, refusing to accept fateful compromise. Let us not even shun the fight when it is unavoidable to preserve right and the dignity of man. If we do this, we shall soon return to conditions that will allow us to rejoice in humanity."

"Only understanding for our neighbors, justice in our dealings and willingness to help our fellow men can give human society permanence and assure security for the individual. Neither intelligence nor inventions nor institutions can serve as substitutes for these most vital parts of education.

"But for the future our hope lies in overcoming the general moral abasement which today gravely menaces the very existence of mankind. Let us labour with all our powers, however feeble, to the end that mankind may recover from its present moral degradation and gain a new vitality and a new strength in its striving for right and justice as well as for a harmonious society."

The publishers are to be congratulated; the book not only makes Einstein known to all but gives publicity to many ideas that would make others halt and ponder.

S. C. MITRA

MODERN ARMS AND FREE MEN: *By Vannevar Bush. William Heinemann Ltd., Distributors, Asia Publishing House, 17 Gunbow Street, Bombay. 1950. Pp. 300. Price 10s. 6d.*

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Dr. Vannevar Bush was for more than ten years President of the Carnegie Institute of Washington. In 1940, he was appointed Chairman of the National Defence Research Committee by President Roosevelt. He, therefore, speaks with knowledge and authority. Dr. Bush has examined, in the present book, the new instruments of war which scientists have brought into being in modern times. After describing the possibilities and limitations of each of these new inventions, he has come to the very important conclusion that the Democracies need not be afraid of an immediate overthrow through their employment by totalitarian powers. If new methods of offence have been devised, newer methods of detection or defence have also not lagged behind. In a country like America, which is geographically as well as economically well-placed, there is therefore no immediate cause for alarm.

But Dr. Bush also points out that unless the democratic countries have a really moral cause to fight for, they will lose much of their internal strength. His suggestion, therefore, is that Americans should immediately address themselves to bringing about real economic democracy within their own territory in order to make their cause really worth fighting for. This revolutionary internal change can be brought about by extensive education and by making the process of democratic government more active and efficient. He does not believe in the complete eradication of private enterprise, but wishes to strike a balance between it and public control. In the meanwhile, this fast-evolving and real democracy must and can be defended by all the powers which science and organization can bestow against the onslaught of totalitarian forces. The supreme good is freedom; not merely material wealth. There can be economic prosperity under a state of domestication or subordination; but the highest good can only grow out of freedom, when it is supported by adequate economic welfare.

This thesis sounds all right for a country which is in the happy position of the U.S.A. But what about men who want to preserve their democratic freedom yet have not the resources to stay the onslaught of powerfully equipped totalitarian powers? Dr. Bush's book, being specifically addressed to American readers, leaves this question unanswered. Unless, however, we can find a solution for this very fundamental problem, the defence of democracy would actually mean the coalescence of small democratic powers under one which has men and money enough to stay the onslaught of totalitarianism. The second, and perhaps more vital problem also remains unanswered, *viz.*, how can we make democracy itself quick and efficient? Can there be a democratic substitute for the method of violence, when the ordinary parliamentary methods prove too slow? Is not the slowness and inefficiency of the parliamentary system one of the reasons why totalitarianism is expanding in a world when it stands urgently in need of quick change?

Perhaps the answer to both these questions could be found in a new development of Gandhi's Constructive Programme and Satyagraha, as recast in accordance with the special needs and conditions of various situations. But his experiments have unfortunately been halted at the very first stage when we gained no more than freedom from political subordination.

That apart, Dr. Bush's book can be warmly recommended to all those who are interested in the most vital problem of our times, *viz.*, the preservation of democracy or freedom in a world which is shaking under the fear of modern instruments of destruction.

NIRMAL KUMAR BOSE

QUINQUENNIAL ADMINISTRATION REPORT OF THE ARCHAEOLOGICAL DEPARTMENT, GWALIOR STATE, FOR THE SAMVATS 1998-2002 (Years 1942-46): *Published by the Archaeological Department, Madhya Bharat Government, Gwalior. 1949. Pp. 70 + xxii.*

As the Director of Archaeology, Madhya Bharat Government, explains in his short Preface, the belated publication of this consolidated Report was necessiated by the difficulty, arising from the aftermath of the Great War, of issuing Annual Reports of the Department as in former years. The present Report deals with the usual activiites of the Department under the heads *office work, conservation, excavations, listing of monuments, epigraphy and numismatics, archaeological museum,* etc. In connection with conservation it is pleasing to record the fine example set by a public-spirited merchant of Bhilsa whose donation made it possible for the Department to take steps for the protection of the two Jain caves in the Udayagiri group of monuments (p. 3). On the other hand, one cannot but note with concern that even after completion of a six-year old scheme of conservation much important work remains to be done at the Bagh caves noted for their group of paintings (p. 11). Turning to another head one regrets to find that the excavations at Pawaya had to be stopped for want of funds, while no progress was made at the all-important site of Ujjayini (p. 14), although the Department has to its credit some important excavations at the ninth century site at Amrol (pp. 14-17). Mention is made under another head (pp. 18-19) of an important Sivite temple (of a date not later than ninth century) at the village of Indore, but, strangely enough, the site still awaits conservation. The addition of a sketch-plan in illustration of the architectural features of this last-named temple would have been very welcome. Of the inscriptions collected during this period the earliest and the most important are those referring to two ascetics of the well-known *Mattamayura* sect, while the new discoveries of coins include some fresh types of the Naga kings Bhava Naga and Prabhakara and coins of a new king Vibhu Naga (p. 26).

It is to be earnestly hoped that the Aerhaeological Department of the newly constituted Madhya Bharat State will receive adequate grant from Government in future to cope with its important work which is still for the most part undone.

U. N. GHOSHAL

A STUDY OF THE NEW CONSTITUTION OF INDIAN REPUBLIC: *By Arun Kumar Banerjee. Published by H. Chatterji and Co. Ltd., 19 Shyama Charan De Street, Calcutta-12. Pp. 112 + xv. Price Re. 1-8.*

The monograph under review is a handy volume giving a bird's-eye view of the new constitution of the Indian Republic. It consists of thirteen chapters giving, within a short compass, an account of all the important features of the Constitution and is prefaced by a historical introduction tracing the course of events since August 20, 1917, *i.e.*, the date ushering in a new era in India's Constitutional development which culminated in the inauguration of the present Constitution of Free India. It is hoped the monograph will prove to be a useful help-book for undergraduate students preparing for examination in the subject.

HINDU VIEW OF CHRIST: *By Swami Akhilananda. Published by Philosophical Library, New York. Pp. 291. Price $3.00.*

Jesus, the Christ, is a unique embodiment of divine life which is a light unto the whole world. But of Christ and Christianity as a religion and of religion in general, we find different estimates made by different thinkers in the East and the West and in the past and the present. It is, therefore, good for the world to know what Christ, Christianity and religion as such stand for, and what contribution, if any, they can make for the good of mankind. Swami Akhilanandaji's *Hindu View of Christ* will admirably serve this need. It deals especially with the life and teachings of Christ from the Hindu point of view and also with the agreement and difference between Christianity and Hinduism in certain important matters.

The book consists of ten chapters with an Introduction written by Dr. Walter G. Muelder, Dean of the School of Theology, Boston University, and a Preface by the author. The first chapter explains the distinctive characteristics of an incarnation of God and in their light supports the view that Christ is one among the many incarnations of God. The second chapter shows how Christ was the Oriental of Orientals and his life was the embodiment of Oriental ideals. It shows also that the teachings of Jesus hardly fit in the philosophy of life found in the West in modern times. Chapter III considers the interesting question whether or not Jesus was a *yogi* in the light of the teachings of the Hindu teachers, such as Sri Krishna, Patanjali, Sri Ramakrishna and others, and gives a positive answer to it. In chapter IV, the learned author discusses the nature of spiritual practices and indicates their place and use in the life of Jesus and many of his followers. Chapter V is a vigorous defence of religion in general and Christ's teachings in particular against the charges of futility, deceptiveness and injuriousness that are usually brought forward by some humanists, psychologists and communists. It also helps one to understand the value of religion for the everyday problems of life. Chapter VI is a brilliant exposition of the thesis that the power of Christ and Christianity lies not in the conquest of nature nor in the founding of empires, but in their salutary effect on individual and collective life. Chapter VII explains the real significance of the Cross, on which Jesus died freely, as a symbol of God's love and forgiveness. In chapter VIII, the real spirit of Easter and the lessons that should be learned from it have been elaborated. In the last two chapters the place and value of the teaching and preaching of religion and the Hindu attitude towards Christian missions have been explained by the author with ability and insight. The value of the book is enhanced by a select Bibliography and an Index. We recommend the book to all serious students of the life and teachings of Christ.

S. C. CHATTERJEE

A HISTORY OF THE GOLD COAST: *By W. E. F. Ward. Published by George Allen and Unwin Ltd., London. Price 21s. net.*

The British colony of Gold Coast has an importance all its own. It is the first African colony to have a legislative assembly with an elected majority. U.S.A.-educated Gold Coast leader, Dr. N'krumah is the first African to become the head of a country in the Commonwealth of Nations.

The Gold Coast is made up of the colonies of Gold Coast and Ashanti, the protectorate of Northern Territories and a narrow strip of German Togoland, the last named being attached to the Gold Coast under a mandate of the League of Nations.

England began her career in the Gold Coast as a trader and in the long run became its mistress. English possessions on the coast gradually extended by a series of treaties with the African rulers during the first half of the 19th century. How very similar to the rise of British power in India!

The Gold Coast was declared a Crown Colony in 1874. Ashanti was annexed after a series of wars and became a Crown Colony in 1901. The same year witnessed the birth of the protectorate of Northern Territories. The Colony with an area of 91,000 square miles is an important source of raw materials—cocoa, timber, copra, manganese, citrus fruit and the like—to feed British industries. It is at the same time a very good market for Britain's exportable surplus of consumer goods. Gold Coasters have no tradition of their origin and it is quite possible that their settlement here is a matter of 300 years more or less. They are principally of Negro origin. But in all probability blood of various races courses through their veins. "The Gold Coast," observes Mr. Ward, "is part of the Western Sudan, and over it for thousands of years have flowed and ebbed the folk-wonderings of the African races."

The gold of West Africa was known to the ancient world. Egyptians and Phoenicians made several attempts to circumnavigate Africa and one or more of their expeditions may have visited the Gold Coast and established trading settlements there. But the history of the Gold Coast began in a very real sense in the end of the 15th and the beginning of the 16th centuries. The Portuguese, the first European nation to visit the Gold Coast, went there in the 15th century, when the ancestors of the 20th century Gold Coast Africans had just begun to build their homes there.

Mr. Ward, who spent 16 years in the Gold Coost, traces in the volume under review its history from a period before the first European set foot on the West African shore. He describes the early history of the Gold Coast peoples. the rivalries of the Portuguese, the Dutch, the English and other white races for the lucrative trade in gold and slaves, the rise of the Ashanti, the Tante and other native tribes and the slow but steady expansion and consolidation of British authority. The best two chapters—XIV and XV—describe the recent political and economic developments of the Colony and are of special interest to the student of colonial imperialism in general and of British colonial history in particular.

Pictures, maps and graphs add to its charm and value. The author should be congratulated for having made a really valuable contribution to the existing literature on British Colonies. But the book suffers from one grave defect. Written by one of the ruling race, it gives a picture of the Gold Coast from the ruler's angle of vision. Abolition of slave trade, domestic slavery and the 'Pawn' system, good roads, railways, telegraph, telephone, and spread of education, Western education of course, are undoubtedly a boon to the children of the soil. But is the blessing an unmixed one? What does the Gold Coast African himself think of it? Has not the progress been paid for in a steady denationalization and in the emasculation of the Colony's sturdy manhood and in an unceasing draining away of its wealth? Mr. Ward is discreetly silent on the questions posed above and this omission is surely unfortunate.

SANSKRIT

CHRISTOPANISAT: *By Taracharan Chakravarty, Tarka-Darshan-Tirtha. Available at 12 Bhubon Chatterji Lane, Beadon Street, Calcutta. Price not mentioned.*

This is perhaps the latest addition to the not small amount of literature in Sanskrit on Christianity that has been produced during the last one hundred and fifty years or so presumably to attract the notice of higher class cultured people of India. Similar attempts are known to have been made at different times during the long history of Sanskrit literature by propounders and followers of different systems of religion and thought, indigenous as well as foreign, *e.g.*, Buddhism Jainism, Zoroastrianism and Chaitanyaism—all of which took the help of Sanskrit in view of the exalted position it occupied in the land. The literature dealing with foreign systems, however, does not seem to have gained its objective and attained popularity and attracted serious attention from the world of scholars.

In the book under review we have 'the four gospels rendered into Sanskrit *slokas* from the original English version (R. V.) of the New Testament' which appeared in a prose version in Sanskrit as early as the beginning of the 19th century. The translation is occasionally free and not always strictly literal. The language is generally simple but at times difficult to follow particularly for the peculiar Sanskritised forms of the proper names. It requires to be mentioned that we noticed a number of misprints, grammatical inaccuracies and anachronistic uses of words in senses that have developed in particular regions, especially in Bengal, and in more or less modern times.

CHINTAHARAN CHAKRAVARTI

BENGALI

SARATCHANDRER RACHANAVALI: *Collected and edited by Brajendranath Banerjee. Gurudas Chatterji and Sons, 203-1-1 Cornwallis Street, Calcutta-6. Price Rs. 5.*

The book under review extending over 280 pages is a collection of Saratchandra Chatterjee's works as yet unpublished in book-form. It contains about fifty essays including addresses delivered on various occasions, one short story and three unfinished novels. Some of them appeared in the magazines and periodicals of the time and some in the daily press.

Saratchandra Chatterjee's contribution to Bengali, or for the matter of that, Indian literature is great. Of writers who have acquired an all-India reputation none is perhaps more thoroughly read and better appreciated than this great author. Whether in novels, in sketches, in short stories, in criticisms or in essays, he is never dull. He never loses grip on his subject. Saratchandra infuses life into everything that he writes. He is interested in everything and can make everything interesting. He can impart warmth even into anthropological or sociological discussions. He knows how far to go and where to stop. It is not only in the case of fiction that Saratchandra Chatterjee is great. He is a discerning critic and a keen controversialist. He does not spare his opponent and his rapier-thursts go home. His essays are interspersed with wit and humour.

It is sometimes unwittingly observed that Saratchandra Chatterjee has, by the sheer force of genius only, succeeded in making his writings masterpieces of literature. It is a mistake. During his fairly long stay in Rangoon he read with avidity all the books worth reading contained in a well-stocked library. He was interested in various subjects. He studied sociology, anthropology and psychology. Not only was he educated in the best of all schools, the school of life, he was a life-long student. And the mark of that vast reading and intensive study during a very critical period of his life is evident in his *Narir Mulya* and in the essays published in this book.

The editor is a reputed research-worker and well-known for his industry, thoroughness and editorial acumen. He has spared no pains to collect Chatterjee's writings scattered over the pages of hundreds of magazines, dailies, weeklies, fortnightlies and short-lived periodicals. He is to be congratulated on his success. The publisher has done well to publish such a work. It is a boon to the admirers of Saratchandra Chatterjee's writings.

SAILENDRAKRISHNA LAW

GUJARATI

(1) MADHUPARK: *Thick card-board. Pp. 190. 1947. Price Rs. 3-8.*

(2) BIJAL: *Thick card-board. Pp. 146. 1948. Price Rs. 3.*

Both written by Prof. Premshankar H. Bhatt of Siddharth College, Bombay and published by C. Shantilal and Company, Bombay 2.

Prof. Bhatt combines in him the roles of a poet and critic, and the collection of 12 articles reprinted from his contributions to various magazines between 1937 and 1946 on old and modern writers in verse and prose, like Akho and Sawal, Narmad and Navalram, as well as promising young writers, like the inspired composers of *Ilakavyo* and *Jyoti Rekha*, have been noticed with the ability of a practised critic, and therefore deserve more than a passing comment. The work is really good. Not content with what he has done in these two directions, he has essayed fiction. *Bijal* is a story of Kathiawad life, where in indigenous Kathiwad's dialect are set out various combinations of the phase of life lived there, and vindication of natural justice. As a first attempt, it is not a failure, but such as the reader makes up his mind to finish at one sitting.

INDIAN PERIODICALS

Gandhi the Economist

Brij Gopal Gupta observes in *Careers and Courses* :

Gandhiji did not write any authoritative treatise on Economics like Adam Smith, Ricardo, Mill and other so-called pillars of the Economic science. He was not a theorist but a realist.

Gandhian Conception

The Gandhian Economics is a combination of individualism, socialism and idealism. He was a believer in Adam Smith's *laissez faire, laissez passer*, but at the same time he was quite receptive to List's idea of 'Protection.' Like Sismondi he was alive to the misery and suffering caused by the advent of machinery and labour-saving appliances. Marx noted the defects of the capitalistic society, but his gospel is a gospel of the control of all the wealth by the community and appealed to varied passions of mankind. Gandhiji also felt the defects of the capitalistic society, but in advancing his solution he was inspired by a large-hearted love. He always looked upward and not downwards. His brand of welfare, better known and clearly understood as *Sarvodaya* (meaning uplift of all) is a far more superior kind of welfare than those talked by Pigou and Beveridge. Gandhiji was deeply interested in human welfare and fully recognised the fact that material, moral and political welfares were all inter-related and that none could be treated in isolation.

Gandhian conception of economics was neither a study of mankind in the ordinary business of life nor of 'allocation of scarce means between unlimited ends.' For him the best political economy was care and culture of men, one that would admonish the mischief created by itself. Gandhiji even made use of the two logical methods of Induction and Deduction (which are used by the economists to analyse economic phenomena). He made use of both by his observance and meditation, thus showing his genius of compromise and commonsense.

Gandhiji was a great advocate of the personality of the individual. He was quite right in his assessment that a large country like India in particular and the world in general cannot fruitfully sustain itself in the long run without individual responsibility. He wanted the least or no interference from the state. Yet he was no doctrinaire free-trader. He fully understood the implications and vices of competition. He was a staunch believer in self-sufficiency.

His Attitude to Machines

Gandhiji advocated a radical change in the machinery and labour ratio. According to him, "Mechanised production does not only threaten the lives of individuals and sections within a nation, but it also imperils the happiness, independence, safety and integrity of nations." The two world wars are a testimony to the cumulative vices of competition. According to him, the only unalterable and rock-bottom test of whether an occupation or method of production is economical or otherwise, is how far it answers life's vital needs and what the making of it means to the producer. The result of mechanised production is a pile of soulless goods. The mill hands—for after all they are 'hands' not 'heads,' much less 'hearts'—do no creative work. The creative faculty is dead in them. Gandhiji was not blind to the advantages accruing from large-scale mechanised production. For him whatever advantages machinery had—and they were numerous—it had enslaved the people, destroyed human skill, invaded the privacy of the home and disturbed the morals of the family, crippled the creative genius of the craftsman and killed his personality as well as independence. It has introduced international complications by rousing a sense of competition where the spirit of co-operation should have ruled their inter-relations and kindled a spirit of imperialism with its attendant horrors of industrialism and militarism. It has annihilated time and distance and has brought nearer the countries of the world but thrown apart the nations one from the other. It has brought together the bodies but rent asunder the hearts and soul of the people.

Gandhian Economics substitutes contentment in place of craze, because salvation of the world lies in the progress towards a non-violent society, which in its turn would depend on the elimination of violence which generally manifests itself in one of the three forms, *viz*, exploitation of man by man, crime and punishment and war. An effort, therefore, would be made to pattern the life of the society on that of the family so that the motive for exploitation ceases and wrongs are redressed, evil resisted and crimes are considered as maladies to be cured.

The Gandhian Way

Hence he considered that plain-living was essential to a non-exploitative society and conducive to the fullness of life. For such a life it is necessary that every individual should put in an amount of physical labour in production of basic needs of life. Regions should be increasingly self-sufficient in respect of material wants. Such regional self-sufficiency in Gandhiji's considered opinion promotes fellow-feeling and improves human relationships in ever-widening circles. Man should therefore be trained and equipped more and more to participate in an intelligent and responsible manner in inter-regional, social, moral and cultural efforts. Regional self-sufficiency based on decentralisation of both economic and political power is essential for the development of the whole personality of man. This, in short, is the Gandhian way, which alone can save the world from the present chaos.

Universities in the U.S.A.

Dr. A. S. Schenkman in a BBC talk as published in *Science and Culture* considers that his task is to give some personal impressions of different types of American Universities and

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

Colleges. He proceeds with his classification of the American Universities :

First in seniority, though not necessarily in rank, as I have just implied, are Harvard and Yale. Age is honoured, in America as in England, and so we can respect the traditions which put Harvard, Yale and Princeton into a class by themselves. Respect, yes, but immediately we admit respect we must show clearly that the respect is neither more nor less than that warranted by the facts. Harvard, Yale, and Princeton fall into a first group on the basis of age and traditional reputation, not necessarily because they differ significantly in other ways from Chicago or Columbia, also great private universities.

Second I shall put the giant State universities, large student bodies, large budgets. I taught for a year at the University of Illinois, 1916-47, and that year the university had in all its divisions 28,000 students. And the budget for a two-year period was $88,000,000 (£31,000,000). In this group of large State universities we put also the Universities of Minnesota (with its outstanding President Morrill, the equivalent of Illinois outstanding Stoddard) the Universities of Michigan, Wisconsin, California, and Ohio State. I shall make a third arbitrary group to include the giants of the Columbia, Cornell, Chicago, private-type and the medium State universities. In 1949, Columbia had 21,000 students, Cornell 9,000, Chicago 11,000 and for the same period the average enrolment of some of the more important State universities was about 12,000 students.

In a fourth group I shall put the small State universities such as those of New Hampshire, Vermont, Virginia, Maine. These often produce teachers and professors who are taken up by institutions higher in the present prestige level of American educational life. I shall make a fifth hybrid group for the world-famous Massachusetts and California Institutes of Technology, and several more of the type. And finally, in two last categories we have the smaller American colleges—the well-known institutions such as Oberlin and Swarthmore, Amherst and Williams, Antioch College. And similar, in size at least, the many small colleges whose names are known only to a few. These exist, most of them, without reputation, and play a humble (but a worthwhile) part. So much for the stage. Now to consider their over-all design.

The 'High-School Product'

It is not easy, in a brief space, to give a picture of something as complicated as American education. Yet actually the main lines are simple to draw. There are the institutions, the teachers, and the students. I have tried roughly to classify the institutions. I think that, with like accuracy and like freedom, I can also describe the students. The average American college student is poorly prepared to face either the realities of life or the academic and artificial rigours of college education. In the majority of cases the "high-school product" is poorly equipped by his school (secondary school). He has had bad teaching. And he enters college (or matriculates as you would say) with, if anything, but vague notions of what he is looking for. Entrance to college is at the average age of seventeen—and so, as you see, he is younger (and for that reason alone less academically advanced) than a student who starts at Oxford or Bristol. I think that there is no question that academically, in book learning, the American student in the late teens is a year or more behind his English age-equivalent, though he may have greater flexibility socially.

I pay my respects to the American high school. It has served a function, but that it has succeeded in bringing real education, few, even in the United States, would claim. The high school is an outfit of mass production, and the product is often criticised by college presidents as of excellent quality but 'coming apart at the seams' Hutchins, President Chicago University, spoke recently on education for democracy. 'The foundation of democracy is universal suffrage,' he said. 'Universal suffrage makes every man a ruler; every man needs the education that rulers ought to have.' But, he added, 'in America in the last 150 years the idea of an education appropriate to rulers has got lost somewhere.' We accept the premise that 'everybody has the right to education' yet we believe that 'only a few are qualified for a good education.' Therefore says Hutchins, 'it appears that those who have no qualification for a good education must be given a bad education, because everybody has the right to education.' Hutchins is often only fifty per cent. sense and the other fifty per cent. spice. But he is right about the state of our educational health. Teaching is pretty poor in the American school and we have a cycle—poor teachers, poor students, poor teachers (especially with the low prestige accorded to school teaching), poor students, and so on. The educationist has his cycle just as definitely as the botanist has his carbon cycle, and the astronomer his cycles.

What happens, then, when this high school student gets handed his diploma—many of them do not reach even that stage, having left school out of sheer boredom, and takes himself off to college? He knocks at the door of Harvard, and if Harvard does not take him Columbia may, and if not Columbia the University of Vermont. To complicate the possibilities further, he may even go to one of many 'junior colleges' for two years of college studying. Let us accept him at Vermont, or Columbia. The college (I use the term to include universities here) is also an outfit of mass production. There were about 2,000,000 students in American colleges and universities

For Sensing, Feeling and Seeing the Pleasure—

a year or two ago, not counting an additional 600,000 working for advanced degrees. It takes no great powers of prophecy to say that the average American student will read for a B.A. or B.Sc., the American degree which is a year or two—more in extreme cases—behind your English B.A. In other words the student is immediately put into the mould and if nothing untoward happens and he does the minimum amount of work required—the proper number of 'units' or courses—he will at the end of four years be given his degree, and in many cases with much deserved honours.

GOOD SPECIALIST EDUCATION

But the average student, being average, does not work for or receive honours. What does he get from his college education? In most cases, a good specialist education—not more. He has been lectured at for four years (and with 2,000,000 college students in the country we are told that the lecture system has to stay), he has been treated often as an inanimate 'thing' rather than as a personality. But his B.A. is the key to so many jobs, and he has that key. By the time he gets his diploma in his hand he identifies B.A. with education, is convinced that because he is a specialist in one field, statistics, or Spanish, or agriculture—he is now qualified to make pronouncements on—oh, so many things. He can now differentiate without emotion between Roosevelt and Willkie, between Truman and MacArthur, or that is what he feels. Some of the world's problems are due to the production—in all countries—of too many specialists who think that because they have degrees they are therefore educated and should be listened to.

It is an unfortunate thing. One might say that in America we have devalued the college (or university) degree. But people still go for devalued currency. Not only is a university education in great demand but there is such an emphasis on degrees, that those who do not have them—and there are still many—feel inferior, uneducated, handicapped, and so on. And we have the interesting, and sad, phenomenon of many people who have an education that only life itself and experience can give, feeling sorry for themselves because they never had an opportunity to get a degree; at the opposite extreme college-trained men and women, excellent folks many of them, bolstered by the possession of these diplomas, degrees, prestige symbols, feeling sure of themselves because they have had the essential college education or degree. I need not even point out the obvious—that an uneducated college man, in the wrong place, can do a great deal of harm.

All of this refers to the 'average student.' Our finest products are equal to any in the world. But if our average is low, what is the reason? My own answer is that we must look to the teaching staff. To be sure, the college president claims that most of the fault is in the curriculum, and that we need only give students more 'general education.' General education bids fair to become the fetish of the 'fifties' and America must get both credit for starting the movement and blame for keeping it too much on paper. One does not have general education simply by changing the number of a course and transferring it to the jurisdiction of a committee on general education. I have myself taught as a junior instructor in just such a number-changed course, and so I know. Too often do we in America make glorious curricular changes—and keep the same teachers to administer them. It does not make sense. But what are our teachers like? I am speaking now of university teachers. They are well equipped professionally in their own fields. In many cases they are the world experts in their particular subjects. But more often than not they are specialists and not 'generally educated'.....,I shall

make another division here. There is a difference between college teachers and university teachers. In the American university there is usually more emphasis on research, and promotions are given for research accomplishment and not usualy merely for good teaching. Research (or shall we say 'production of papers' ?) is what seems to matter, and teaching is all too often ignored. The younger staff members of a university have first to finish their degrees, and then their lives are ruled by the necessity to produce a certain number of papers each year.

Smaller institutions, colleges of the Swarthmore or Amherst type, have developed their reputations more because of their standards of teaching and the atmosphere is far, far healthier. To be sure, even these small residential colleges have an air of artificiality about them, but there is much less separation here between 'education' and 'life.' And, whereas in the Harvard, Columbia type of institution most of the actual teaching of undergraduates is done by younger men, men pressed by their own degree requirements, here at the small colleges teaching can more often be done by those who like it for its own sake. The record is pretty clear on this point. Good average small colleges make a significant contribution out of all proportion to their size. And the larger and 'greater' universities do not contribute so much in undergraduate teaching as might have been imagined. My own belief is that the larger the university the greater the malady of psychological isolation; and curricular changes alone cannot remedy the dangers of the situation, cannot give students a 'feeling of belongingness' to an institution which because of size itself has come to be impersonal.

When it comes right down to it, there is no such things as a 'best university' in America or anywhere else. Students can still 'belong' to places the size of Antioch, of Aberdeen, of Reading—or of Reed College. But in a university which runs up in size much above two or three thousand students, the 'loyalty' of individuals seems to be directed more to departments—and to teachers—than to the rather inanimate university body. The true university is a collection of men and women who work together with a common purpose and a common goal. Because it is so seldom that students are given the right to help determine this common purpose and goal, we have outstanding departments more often than great universities. I could name the Astronomy Department at Harvard, Physics at Bristol, Education at Utrecht, Philosophy at Edinburgh, Physiology at Cambridge or Lund. I could name, too, departments, in all subjects, which do so outstanding a job in post-graduate training in many American institutions. These are the groups which develop group spirit, to such a high degree.

There are, then, great differences between the English and the American educational scenes. If you are shocked by my picture of the average American student, remember please that our average is bound to be lower than yours, in academic attainments and in educational achievements, because we give a college education to so many more people, remember, too, that you are having the same problem of over-large size and consequent impersonality in universities like Liverpool or Leeds, or Glasgow.

But there is no such thing as a best university. There are many which, as Hutchins says, are 'not very good'—but which have outstanding and dedicated men. If only we would learn to make the 'feeling of belongingness' which we see in some departments include even more students and teachers, in even more universities. If we could do this then what would be taking place in Redbricks, American and European, would truly be significant in the world today.

Vidisa and Sanchi

In the course of his article on the sixteenth session of the All-India Oriental Conference held in Lucknow in the first week of October, 1951, Dr. V. Raghavan writes in *The Vedanta Kesari*:

Having finished Agra on the onward journey to Lucknow, the writer came down to the states of Gwalior and Bhopal to see Bhilsa and Sanchi. The antiquity of the Buddhistic monuments of Sanchi go to the time of Asoka, whose pillar edict here, as the one at Saranath, warns the monks against schismatic activities. The Stupa at Sanchi stands on a small hill, very near the present Railway station of the same name, and thanks to the labour and care of successive archaeologists, Cunningham, Maisey, Marshall and others, the Stupa stands now in as good a restoration as possible; the broken fragments have also been gathered in a Museum in situ. The three huge volumes of illustrations reproducing the entire monument in all its parts and commentary thereon by Marshall, Foucher and Majumdar published and presented by the Government of Bhopal to all important libraries bespeak the care that the State has been bestowing on this great site which occupies a leading place in the history of Indian art. The Stupa itself enshrined the relics of the two chief pupils of the Buddha, Sariputta and Moggalana, which have recently been so much in the news, and for which the Maha-Bodhi Society has built on the foreground of the same hill a modern temple which, despite the desire to embody some of the local architectural motifs and designs, fails to harmonise with the Stupa. The structures of the site come up to the Gupta times and the best and oldest part of the work on the main Stupa and its four gateways, embodying carvings on sandstone of scenes from Buddha's life and the Jatakas, was done in the period of the Sungas in the centuries immediately preceding Christ. The fine carvings have reproduced in the smallest compass a whole civilization, and to a student not merely of sculpture, but of social conditions, vehicles, dress, ornaments, music, dance, etc., they afford ample materials. As the writer unwillingly walked down the steps of the hill to hurry to the neighbouring Bhilsa, his feeling was one of exhilaration, like that of one who had realised a great ambition or reached one of the land-marks of his career.

In its great old days, Sanchi was part of the great Vidisa (Bhilsa), a capital of the Sungas, the renowned seat of a king, as Kalidasa says in his *Meghadutam*.

It was here that Kalidasa's hero Agnimitra, and the Sudraka of Bana's Kadambari ruled. There is little doubt that Kalidasa sojourned in this region for some time and as the writer wandered over the place and laid himself in the cool dark waters of the Betwa here, his heart, in wistful imagination, like the poet's cloud, travelled over the lines of the Meghasandesa on the Dasarna country and the rippled waters of the Vetravati which the poet asks the cloud to drink from, as from the beloved's face with playful brows.

The old Vidisa whose older importance was later eclipsed by Ujjain, must have extended from the Sanchi site to the site of the confluence of the two rivers Betwa (Vetravati) and Bes, the latter of which gives the name Besnagar to the locality. The Vetravati winds its way along Sanchi. Four miles from the present township of Bhilsa is the double hill called Udayagiri, which, with its twenty caves carvings and inscriptions, was an important place in the Gupta times; on the rear of the hill, on the topmost platform is found the basement of a Gupta temple, and when one looks down from here towards the Bes skirting the hill, one can very well imagine the picturesque town which once flourished here; and two miles from the same Bhilsa, in the fork of the Bes and Vetravati, stands the famous Heliodorus column, testifying to the existence of a populous Besnagar in 150 B.C. at this sacred sangam.

The Udayagiri hills contain twenty caves, including a couple of Jain and Buddhistic monuments. They belong to the Gupta age and are valuable for history, literature, religion and iconography. According to one of the epigraphs here, King Chandragupta II Vikramaditya himself visited Udayagiri in the company of a poet of Pataliputra, Kausta Saba. The most famous is the Varaha cave (no. 5), where we have the scene of the Lord's Boar incarnation carved in appropriately large dimensions, and represents the most impressive and best preserved work in these hills. Next in importance would come the cave (no. 13) where lies the figure of Vishnu Seshasayi, which is unfortunately cut atwain on the face. The Amrita-mathana scene on the top of the door of cave 19 is a rare and noteworthy piece of work. The repeated representation of Devi Mahishasura-mardani with twelve arms and the buffalo-demon, but standing on foot and not riding a lion as either in Mahabalipuram or Bana's Chandi Sataka, and always accompanied by the representation of the Sapta-matrikas is significant for the history of Devi-cult, showing an earlier phase. The rock of Udayagiri comes off in slates and this has unfortunately

led to the deterioration of all the work here, except that in the Varaha cave.

The Heliodorus column is of greater cultural significance and is a standing monument of the attraction which Hinduism had for the foreign Greeks settled on Indian soil. The monument is a Garuda-stambha, set up in honour of God Vasudeva and bears an inforing Pali inscription which says that 'Heliodora, the son of Diya (Dion), a native of Taxila' came as an ambassador from Maharaja Amtalikita (the Greek Satrap Antialkidas) to the Sunga King Bhagabhadra, son of Kasi in the fourteenth year of the latter's reign; Heridorous calls himself further, in this inscription, a Bhagavata and says that three are the steps to immortality. Self-control, Sacrifice, and Vigilance, the passage echoing, (as has been rightly pointed out by H. C. Roychoudhuri in the *Journal of the Asiatic Society, Bengal*, 1922, p. 269, and the *Political History of Ancient India*, p. 253 and by K. Balasubrahmanya Iyer in the *Journal of Oriental Research*, Vol. XV., p. 136), one in the Sanatsujatiya of the *Mahabharata*.

The spell that Hinduism cast on foreigners and its inclusive zeal in times of antiquity were indeed appropriate thoughts with which one could come home. But sometimes there was also the other thought—how desirable and necessary it is for the new national Government of Free India to make special facilities available for scholars and votaries of culture to see the great centres of ancient Indian cultural activity, not only in this far-flung country, but in the neighbouring countries of Greater India where once India reared a magnificent cultural empire!

1950 Always in the Forefront

CO-OPERATIVE INSURANCE SOCIETY ₹ + HINDUSTHAN

In the forward march of Life Insurance in India, the HINDUSTHAN is, as it has always been in the forefront. The 44th Annual Report for 1950 once again reflects the soundness, integrity and strength which always have been so characteristic of the Society.

Assurances in force	Rs. 73,16,60,597
Total Assets	,, 17,70,70,624
Life Fund	,, 15,97,47,548
Premium Income	,, 3,40,47,338
Claims Paid (1950)	,, 72,92,850
New Business	**Rs. 13,75,39,851**

But the best of all assets which the HINDUSTHAN is really proud of is the continued Public confidence which has always attended its career.

Emerson and Eastern Values

Chidambaram Swami writes in *The Aryan Path*:

Man in every age and clime has been aware of ultimates in his own way. Hence the fundamentals of men's faith more or less agree, all the world over and throughout history. The difference, if any, is not in the ultimates, but in man's view of them and in the values that he gives to them, and in this he appears to be very largely influenced by heredity, tradition, environment and history. Views and values, in fact, imply an object or an ultimate. The East, particularly India, has been friendly to the ultimates. Hence the East became the cradle of religion and philosophy.

There seems to be an incompatibility between values of the ultimate, viewed mainly from the superficial or materialistic angle, and from the substantial or spiritual angle. Hence the difference, that has now become popular, between views or values, Oriental and Occidental. The ruthless use of the analytical scalpel is partly responsible for the creation of what seems like a permanent abyss between the two. But in a world of impermanence, how can there be anything like a permanent barrier or abyss? What, then, are the Eastern values, and how does Emerson stand in relation to them? Where do we find him on the Aryan Path?

Emerson's life proves beyond doubt that he was not a slave to convention or tradition, pelf or self, cult or system.

"He had a passion for the examination of ethical and metaphysical systems which is very like Franklin's zest for peering into the secrets of Nature . . . Everything that the world's philosophy can offer emerges in Emerson's pages."—Harold Laski: *The American Democracy.*

He was influenced, as Swami Nikhilananda pointed out in a recent address, by the philosophy of Greece, the ethics of China, the poetry of the Sufis, and the mystical ideas of India. Consequently he was viewed in different ways: by Oliver Wendell Holmes as "Buddha of the West," by the New Englander as a "New England Brahmin," by Allan Nevins as the "Mahomet of the Mecca of Concord," by Max Muller as "Amarasunu," by Maeterlinck as "the sage of ordinary days," by Frederick Harrison as "the unfathomable prophet of the eternal silences," by Conan Doyle as one as "truly inspired as the ancient prophets," by the most reactionary and powerful of Russian statesmen as "an oracle." Emerson had a great attraction to the Orient. He sings of "Zion or Meru," of "Bethlehem's Heart," of "The Free Arab," of "The Pandit of the East," of "Good Saadi" and "Wise Ali," of "the Brahmin and the Sacred Seven," of "The Worth of Omar's Pearls," of "Alcoran and Its Meanings Sweet," and of "Ali Ben Abu Taleb and Hafiz."

Who know every temple and Kiosk,
Out from Mecca to Ispahan.

of "Beggars in Iran and Araby," of the Bible, the sacred writings of the Hindus, the Persians and the Greeks, "the alphabet of the nations," Socrates, Manu, Mencius, Confucius and Zartusht.

Value implies an object and one who evaluates. The essence of value lies perhaps in the experiencing subject. It depends on the interaction of subjective and objective factors. There are competing values hard to decide between. One feels very often the need for a standard of value and this presupposes a central or supreme value which will harmonize and complete the values of experience. Values can be known only through experience, lower or higher.

"The ideal of value is harmonious living."—George Galloway: *The Philosophy of Religion.*

Harmony itself is life. Life's value is Harmony. It is here that we find the heart of Eastern values. The legacy which the East has bequeathed to the world is the concept that Life is harmony and that harmony can be attained by actually living the Light that streams through us, we know not whence. True harmony, Concord, *Shanti*, consists in seeing in Matter, Spirit; in Jeevatma, the projection of the Paramatma. This is the Sanatanic harmony. Its substitutes will pass away. It is this harmony that has blossomed in the Eastern culture, described by Pandit Nehru in an address at Nagpur on 1st January, 1950, as "a culture deep, abiding, and subsisting and carrying on in spite of terrible disasters through thousands of years." The same strain is heard from Concord: "The central intention of Nature is harmony and joy." The real value of this highest teaching of the East can be enjoyed and demonstrated only by a man's "becoming the embodiment of what he believes in," as the Prime Minister observed in that speech, and making it as far as practicable the basis of human activity in all departments.

Emerson's attraction to the East, more inherent than induced showed itself even in his teens. He found himself at home with Oriental thought. Born in 1803, as early as 1822 he wrote to his aunt:

"I am curious to read your Hindu Mythologies. One is apt to lament over indolence and ignorance, when he reads some of those sanguine students of the Eastern antiquities, who seem to think that all the books of knowledge and all the wisdom of Europe twice told lie hid in the treasures of the Brahmins and the volumes of Zoroaster."

We shall now deal with certain characteristic parallels between Emerson and the Sages of the East.

"He who works, having given up attachment, resigning his actions to God, is not touched by sin, even as a lotus leaf is untouched by water."—*Gita*, V. 10.

"Teach me your mood, O patient stars! who climb each night the ancient sky, leaving on space no shade, no scars, no trace of age, no fear to die."—Emerson.

"He who thinks that this slays and he who thinks that this is slain; both of them fail to perceive the truth; this one neither slays nor is slain."—*Gita* II. 19.

If the red slayer think he slays,
Or if the slain think he is slain,
Then know not well the subtle ways
I keep, and pass, and turn again.—Emerson

Swami Paramananda in *Emerson and Vedanta* draws other illuminating parallels between Emerson and certain scenes familiar to the Pilgrims on the Aryan Path.

"*Ekam evadwitiyam.* Spirit is one without a second. The Absolute though One is conceived as many; countless luminaries become one in Him; all sacred rites become one in Him. He abides equally in the Soul of all existing things; He is the Inner Self of all creatures, and all beings become one in Him."—*Yajur Veda.*

"There is One Mind common to all individual men. Every man is an inlet to the same and to all of the same . . . Who hath access to this universal mind is a party to all that is or can be done, for this is the only and sovereign agent . . . Of the Universal Mind each individual man is one more incarnation."—Emerson

"In the nature of the soul is the compensation for the inequalities of condition. The radical tragedy

CC-0. In Public Domain. Gurukul Kangri Collection, Haridwar

Digitized by Arya Samaj Foundation Chennai and eGangotri

seems to be the distinction of More and Less . . . It seems a great injustice. But see the facts nearly and these inequalities vanish . . . The heart and soul of all being one, this bitterness of His and Mine ceases. His is mine, I am my brother, and my brother is me."—EMERSON

"The Atman cannot be attained by the mere study of the Scriptures, nor by intellectual perception, nor by frequent hearing of it; he whom the Self chooses, by him alone is It attained. To him the Self reveals Its true nature. But he who has not turned away from evil conduct, whose senses are uncontrolled, who is not tranquil, whose mind is not at rest, he can never attain this Self, even by knowledge.—*Kathopanishad.*

"Every man's word, who speaks from that life must sound vain to those who do not dwell in the same thought on their own part. I dare not speak for It. My words do not carry Its august sense; they fall short and cold. Only Itself can inspire whom It will, and behold! Their speech shall be lyrical and sweet, and universal as the rising of the wind. Before we can define our relation with the world, we must discover our relation with its source. That is, we must project our mind beyond this little span of self-consciousness and learn to know our real Self."—EMERSON

"When the light of the Atman or Self has risen, there is no day, no night, neither existence nor non-existence. For the Sun does not shine there, nor the moon nor the stars, nor these lightnings, and much less this fire. When He shines, everything shines after Him; by His Light all this is lighted. He makes all. He knows all, the Self-caused, the Knower, the Time of time."—*Svetasvataropanishad*

"The emphasis of facts and persons in my thought has nothing to do with time. And so always the soul's scale is one: the scale of the senses and the understanding is another. Before the revelation of the Soul, Time, Space, and Nature shrink away.—EMERSON

"Truth is not the exclusive property of any one group of people, but is the common property of the whole human race and equally open to all who can claim it. Whoever is open to truth does not care from what source it comes. It is Truth, that is sufficient. Lofty spiritual truth exists, irrespective of time or place. When people are ready to receive It, It unfolds Itself to them."—*Vedic Teaching*

"The mind is one, and the best minds, who love Truth for its own sake, think much less of property in Truth. They accept it thankfully everywhere and do not label or stamp it with any man's name, for it is theirs, long beforehand, and from eternity. The learned and the studious of thought have no monopoly of wisdom. Their violence of direction in some degree disqualifies them to think truly. We owe many valuable observations to people who are not very acute or profound, and who say the thing without effort, which we want, and have long been hunting in vain. The action of the soul is oftener in that which is felt and left unsaid, than in that which is said in any conversation."—EMERSON

"The Self-existent created the senses out-going; for this reason man sees the external world, not the inner Atman or Self. Some wise men, however, desiring immortality, with eyes turned away from the external, see the Great Self within."—*Vedic Scriptures*

"The great difference between teachers, sacred or literary, is that one class speak *from within* or from experience, as parties and possessors of the fact and the other class *from without* as spectators merely, or perhaps as acquainted with the fact on the evidence of third persons."—EMERSON

"The knower of Brahman (the Supreme) becomes like unto Brahman . . . Rejoices, because he has obtained that which is the cause of all true joy."—*Kathopanishad.*

"Ineffable is the union of man and God in every act of the Soul. The simplest person, who in his integrity worships God, becomes God: yet for ever and ever the influx of this better and universal Self is new and unsearchable."—EMERSON

Let us see further Emerson's wonderful agreement with other Eastern concepts:

Transmigration:

"It is the secret of the world that all things subsist and do not die, but only retire a little from sight, and afterwards return again."

Fate:

When I was born,
From all the seas of strength fate filled a chalice,
Saying, "This be thy portion, child; this chalice,
Less than a lily's, thou shalt daily draw
From my great arteries,—nor less, nor more."

Maya:

The rushing metamorphosis,
Dissolving all that fixture is,
Melt things that be to things that seem,
And solid Nature to a dream.

Do we not find here clear accents of a kindred inspiration and reminiscence of the Aryan Path of life?

Venice—The World's Theatre

Great Theatre of the World's Beauty—so it pleased a fanciful follower of the chevalier Marine to describe Venice in the seventeenth century, and he set about illustrating his conception with a rich album of etchings showing the fantastic and picturesque aspects of the city.

Today the traditional festivals are no longer as numerous as in the days of the Most Serene Republic, but they still derive a potent and incomparable charm both from the poetry of their past and from their own peculiar usages. The unmistakeable quality of this charm can be gathered from two of these festivals, both nocturnal: The "Festa del Redentore" in July, and the August "Fresco" on the Grand Canal.

The origin of the "Festa del Redentore" is well-known. It goes back to the first celebration of a vow made by the Senate to go, together with the Doge, to offer prayers in a temple which was to be built on the Guidecca in thanksgiving for the City's deliverance from the plague which scourged it from 1576 to 1578. They were two years of frightful mortality which reduced the population by half, completely wiped out a large number of families, crippling the City governors with its toll, spread death and fear everywhere, and carried off many famous men, first among them Titian, full of years and glory. The building of the temple was entrusted to Palladio, who created in it the most perfect of his masterpieces of sacred architecture. The Doge's first solemn procession to the Guidecca took place as soon as the disappearance of the scourge was proclaimed, on the 21st of July, 1578. At that time, the temple's foundations were still being laid; and upon them, therefore, was erected for the occasion a hall of twining leafy branches hung with the richest of tapestries, with an improvised altar in its centre. Leaving the Basilica, the procession passed across the Basin of St. Mark along a bridge of boats stretching from the Palazzo Ducale shore to the island: the procession consisted of the Patriarch, the clergy, the religious guilds and those of the arts and crafts, the militia, the Chief Council, the Senate, the Doge with his court, and, immediately following, the surviving population chanting psalms.

In those days, the Giudecca was a place of grassy meadows and gardens, of fertile orchards, of a few but splendid patrician villas, of taverns and inns. When the religious ceremonies were over, the people scattered among these places of delight, lingering there, improvising dinners and suppers in the open air, enjoying the peace of sea and meadow, happy in their escape from the nightmare of death. But since it was not easy for all to cross to the Giudecca by the bridge, many Venetians made their way, especially in the evening, in boats of every kind, pleasantly decorated and illuminated. And, in order to avoid the crowded landing-stages, they, from the mortal fear of unclean contacts, remained to banquet on board. The confused and improvised rejoicings of the early years gave place in later ones to carefully ordered festivities; instead of the bridge across the Basin, two were built; one spanning the Grand Canal, the other the Giudecca canal, and over them passed and repassed the daylight processions for the religious ceremony. When evening fell, however, the boats arrived for the night's festivities which rapidly increased in splendour; public illuminations were added to the private ones; the little individual boats were joined by the huge barges of companies and guilds, transformed into floating banqueting-halls a-glitter with lights. In the midst were ampler pagodas formed by thousands upon thousands of lights within gaily-painted swaying Murano vases, with companies of singers and musicians; myriads of trembling Chinese lanterns lined the quays, throwing into relief the lines of the architecture, dotting the altars; fireworks blossomed into arabesques of flame, lighting the sky with their thunderous flashes and filling the waters with their reflections; everything was caught up in a whirl, an orgy, a rhythm of colour and sound, and the festival took on that character of a Bacchanalian night which has never since left it, and which is interrupted only by the dawn rising above the smoky Adriatic horizon.

The Night of the Redeemer, however, although it has its panoramic aspect on the Giudecca canal, splits itself into a thousand-and-one impulses which range the streets. Beneath pergolas of entwined mulberry branches, and lighted in Venetian style, the people dance, sing and drink, enlivening the City's remotest corners with scenes which offer a varied and impressive experience to him who knows where to find them among the maze of twisting alleys. The festival of the Night of the Redeemer, like the Naples Piedigrotta was for long a source of musical inspiration; from it sprang the "boat-songs" which became famous and which now form the repertoire of the gondola-serenade. One of these songs refers to the Night of the Redeemer as "most celebrated"; most celebrated it is indeed, and inimitable, and no one can claim to know Venetian life from the inside who has not enjoyed it at least once.

If the Night of the Redeemer is a people's festival, when they lightheartedly let themselves go, the Fresco Notturo in Canalgrande is aristocratic and rich in aesthetic emotions. Strictly speaking it may be held to derive from the famous freschi or evening races which followed the solemn regattas of large and small gondolas watched by the whole population from the banks; those re-

gattas which, usually taking place in September in a magnificent setting of historical pomp with processions of sumptuous allegorical boats rowed by crews in gorgeous costumes, provide another of the typical spectacles of Venice. The "freschi" were the gay wanderings and swarmings of boats loaded with clusters of human beings. As night advanced, this festival took on a quality of fantasy in which light dominated and held sway. For, every one of the hundreds of palaces lining the Canalazzo is lighted up in the way best suited to set off its particular beauties, while their several effects are joined in a general plan of progressive harmony. Reflected lights, coloured shades, diffused and delicate tints, now deepening, now unveiling the mystery of ark portals, elegant arches, alleys which, escaping from the gaze, plunge into the gloom beyond, and revealing monuments of every epoch enhanced by their frame of shadows; they follow each other from one end to the other of the world's most celebrated waterway, twisting with it on this side and that of the Rialto bridge. Through the wide-open windows, splendid interiors are seen, glowing with the light of huge crystal chandeliers from Murano, while along the balconies flutter the flames of candles. Into this magic setting as evening darkens, slide the processions of illuminated gondolas, the boats prepared for the occasion, glittering barges from which a programme of rare music will be wafted into the air; the pagodas all outlined with Chinese lanterns; and, finally the humble, unpretentious, but none the less necessary, boats of the people. Soon they are crowded together so close that one could, if one wished, pass on foot across them from bank to bank; a slowly moving throng, both audience and actors at the same time, in the spectacle of which they make part; they add to the solemn marble stillness of the background the disordered brush-strokes in a picture which is continually renewed with each changing vantage-point.

Truly Venice triumphs in this art of turning herself into a stage setting, in which she, a protagonist of unrivalled loveliness, exalts and displays that beauty at once incomparable and unforgettable.—*Bulletin of Italian Cultural Information.*

Andre Gide
1869-1951

The death of Andre Gide on February 19, at the age of 82, has robbed world literature of one of its most distinguished contemporary contributors.

World-wide recognition of his works was expressed not long ago through the award of the Nobel prize. More recently, Paris paid tribute to the great writer when the presentation of his *Caves du Vatican* was given at the Comedie-Francaise.

Sixty years ago, Gide's first books revealed to a discerning few, the restless searching of a mind that was to travel along many roads and absorb the most varied experiences.

From his stimulating travels in North Africa he drew inspiration for his *Nourritures Terrestres* (1897) followed by *L'Immoraliste* (1902) and *Le Retour de l'Enfant Prodigue* (1903). His unorthodox ideas stimulated many young artists at the beginning of the century and two movements in particular which were to bring new life both to literature and the theatre: the "Nouvelle Revue Francaise," launched in 1909, and Jacques Copeau's Vieux-Colombier.

After the first world war, Gide began to study social problems. The travel diaries written in 1927 from materials gathered during his travels in the Congo and Chad, created a stir because of his outspoken condemnation of certain abuses of that period. In 1936 he published two books on his experiences in Soviet Russia—*Retour de l'U.R.S.S.* and *Retouches a Mon Retour*—both of which inspired widespread controversy.

Gide strove endlessly to preserve the purity of the French language, but his ideas and philosophy were constantly enriched by contact with the works of foreign authors. He was proud to have introduced Kierkegaard to French readers. In addition to a voluminous output of creative writing, he wrote commentaries on Dostoievsky and Oscar Wilde, and translated Rilke Shakespeare, Conrad, Blake, Whitman, Tagore and Kafka.

From the *Journal* begun in 1889 to his latest works, the writings of Andre Gide were a mirror of the constantly changing values of man's social and moral evolution during these sixty odd years.

At the Nobel prize-giving ceremony on December 10, 1947, M. Osterling permanent secretary to the Swedish Academy of Literature, described the personality of this "much discussed writer" in these words :

"A very significant period in Europe's spiritual history is reflected in his works. More than any of his contemporaries, he was a man of contrasts, a Proteus whose ideas and opinions were in a continual state of flux. Hence, his writings are like an uninterrupted dialogue in which faith wages a ceaseless war against doubt, ascetism against an abundant love of life, discipline against a deep urge for liberty....

"....Gide comes from a Protestant family, and although he revolted against his Puritan upbringing, he has remained all his life in contact with the fundamental problems of religion and at times, he has been able to express with a rare purity the message of Christian love...

"His 'immoralism,' so frequently misunderstood by

DIABETES
CURED
IN SEVEN DAYS

No matter how severe or long standing, Diabetes can be completely cured by VENUS CHARM, the latest scientific Discovery. Some of the main symptoms of this disease are Abnormal thirst and hunger, excess sugar in urine and itching, etc. In its serious form, it causes Carbuncles, Boils, Cataract and other complications. Thousands have escaped from the gallows of death by using "VENUS CHARM". The very next day it eradicates sugar and normalises specific gravity. Within two or three days you will feel more than half cured. No dietary restrictions. Ask for Free literature. Price per phial of 50 tablets Rs. 6-12-0. Postage free. Available from

his critics is in reality no more than the expression of his fervent desire for freedom from any restraint of conscience....

"His philosophy is a ceaseless search for 'the new.' He wants to awaken and instil new ideas, to set new problems. Above all, the effect is to challenge his readers to be wholehearted supporters or opponents of his ideas. This is the secret of his greatness."—*Unesco Courier.*

Fifty Thousand Americanisms

Bergen Evans writes about the not inconsiderable influence of Americanisms in an article on the history of the dictionary of the English language in the Newsfeature of *USIS*:

Americans have created or given new meanings to about 50,000 words in the past 300 years. These are now collected and comprehensively surveyed for the first time in the new *Dictionary of Americanisms*, edited by Dr. Mitford M. Mathews, of the University of Chicago Press. It is a valuable supplement to the *Oxford English Dictionary* and the two, together, with the *English Dialect Dictionary*, constitute a complete survey of the English language as spoken in the past and at present.

Americanisms are not confined to any particular region or class and do not for the most part represent older forms abandoned by standard speech. They fall into two classes: words which first came into the English language in the United States and English words which have acquired a special meaing in American usage.

Of words first used by Americans many are thought to be American Indian names for native growths—such as tobacco, persimmon, opossum. New devices needed new names—bifocals. harmonica, mimeograph; and contributions to science—appendicitis, tularemia, moron. Words such as nerts, phooey, and bunk. expressing various degrees of disdain, are original Americanisms. New meanings for older English words have resulted in the American robin and polecat. for example. being not the same animals as the European robin and polecat, but one looked and the other smelled sufficiently like their old-world counterparts to justify transferring the names. In a like manner, new objects, new circumstances. and new customs gradually forced new meanings into old words until they were wholly changed.

Of the 50,000 terms which the *Dictionary of Americanisms* lists as peculiarly American only about 1,600 are borrowings from other languages. This seems very few, but it may be attributed in part to a lag between the adoption of a word and its appearance in a dictionary such as this, where each entry must have passed into printed use before it is included. The greatest number of additions were borrowed from the Spanish—then, in descending order of their frequency, from the American Indians, the French, the Dutch and the Germans. The large number of Spanish words is due to the United States having incorporated a number of areas in which Spanish was the established language. Thus there are words such as adobe, which is the name for clay of mud bricks dried by the sun and used in building adobe houses; arroyo, meaning the dry bed of a stream; mesa, a small, high plateau with steep sides; lariat, a long rope with a running noose at one end, used for lassoing or tethering animals, and buckaroo, another name for the ranch worker, or cowboy, of the American South-west.

Most of the French borrowings came from frontier contacts early in United States development and account for such words as detour, prairie, mackinaw, portage and toboggan. The mackinaw, for example, is a heavy short coat, named for Mackinac, in the state of Michigan, where the French at one time distributed supplies to the American Indians. The Dutch borrowings in contrast are domestic, suggestive of well-fed warmth and snugness—waffle, cooky, cruller. The American Santa Claus is taken from the Dutch Saint Nicholas. The German additions are also homely and everyday—wieners, pretzels, hunk and dunk. The wiener, or frankfurter is the main ingredient in the American "hot dog." Hunk means a large piece, as of bread, and dunk means to dip the bread into a liquid when eating. The American hamburger, a round, fried cake made of ground beef, originally was named for the city of Hamburg, Germany, but Americans now have cheeseburgers, beefburgers, nutburgers, turtleburgers and more of the same.

The origin of many Americanisms is unknown. These include words such as gimmick, meaning a secret or a tricky device; grouchy, which means to be sulky or ill-tempered; dogie, the name given to a motherless calf in the American West; shindig, American slang for a merry party or dance; bull-doze, meaning to frighten by violence or threats; charley horse, meaning a stiffness caused by straining a muscle; and hundreds more. Even the midwestern State of Wisconsin is not certain what its name means. And an old automobile is known to Americans as a jalopy but they do not know why.

Many of the 50.000 words in the *Dictionary of Americanisms* eventually may gain international usage, but at the present, only one can establish such claim. It is the American O.K., recognized as "all right; correct; approved" wherever language is spoken.

Giving Science A Voice

There was launched recently in Paris a French Association of Science Writers—the fifth such national group of special writers in this field. The oldest is the National Association of Science Writers in the U.S.A.; the second is the British; and then follow the Danish and Austrian.

In welcoming the French Association to Unesco House, where it held its first public meeting, Unesco's Director-General, M. Torres Bodet, reminded the writers that the scientist, whatever his discipline, is today at the heart of all progress. There is hardly a field of human activity unaffected by scientific advance. During the last few decades, the consequences of this scientific movement have not only remodelled our whole lives, but have also obliged us to restate and to reconsider all our problems. Religion, morals, our conceptions of the world have been largely reshaped.

Scientific knowledge, continued M. Torres Bodet, has therefore a key part to play in the formation of modern man and in the most urgent problem of our day: the reconciliation of men and the protection of peace. Science, through the riches it creates, can contribute in a fundamental manner to satisfy the basic needs of mankind and, in so doing, it works for peace. Further, the universality of the scientific mind., the generality of its methods, and the unbiassed enthusiasm that research work engenders, all these help to build a common bridge between men.

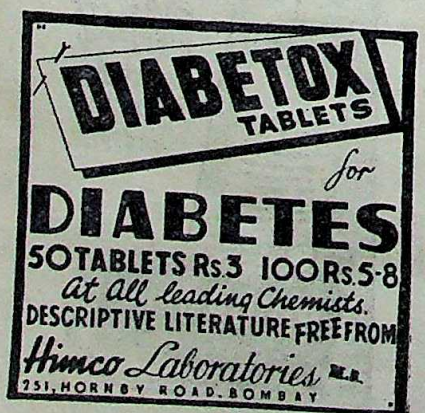
Eyes For The People

Science writers therefore have a key task to perform in society. It is not an easy one, for there is much ill-will, mistrust and fear of science to overcome. This fear is a symptom of the malaise of our age. The reason for it is obvious. People no longer believe in the inevitability of progress through scientific achievement.

The science writer has the difficult task of pointing out that science is not an end in itself, but a means to an end. It is a search for truth. The final decision about what is to be done with the practical application of scientific research rests with society. Therefore, a democratic society requires an informed public: not the least part of which information must be an adequate knowledge of progress and achievement in the field of the Sciences. The limitations as well as the possibilities of science must be understood. In all countries, whatever their state of economic development, the importance of the role of science is recognized. The Technical Assistance programme would be meaningless without this.

The science writer is the link between the scientists and the people. This is no mere mechanical role: he has a living function to perform. He makes clear to the people the significance of the seemingly esoteric work in the laboratory: he penetrates into the secrets of the test-tube, he examines the radio-active wonders of the atomic pile, and he watches the surgeon with pioneer hands at his pre-frontal leucotomy. Science writers are eyes for the people.

In 1934, at the Pittsburg meeting of the American Association for the Advancement of Science, Professor Einstein was to give his first lecture in English discussing his mathematical proof that mass and energy are equivalent and interchangeable. Mr. Herbert B. Nichols, natural sciences editor of the *Christian Science Monitor*, tells how the newly-formed National Association of Science Writers tackled the problem of interpreting this important communication to the public: *Professor Einstein's single paragraph abstract was absolutely hopeless so far as getting any quotable quotes was concerned. His address was scheduled for a most inopportune time for the majority of our deadlines. He was held incommunicado by well-meaning friends. He could not see reporters. So we drafted a request that he meet with us all at a time convenient to him, but in advance of his scheduled lecture.*



Professor Einstein agreed: *That day we all had good, front-page stories in which wt were able to interpret for the public what Einstein's theories actually meant, why the theory of relativity is important to almost every branch of science, and a forecast on the possibility of some day harnessing energy within the nuclei of atoms as a useful source of power.*

Stimulation For Scientists

No science can flourish as an isolate: and the science writer helps to make apparent to the scientists some of the problems that need expert investigation. He is an aid to the vision of the scientist. *I rather think,* comments Mr. Nichols. *that our activities in playing up certain stories like Urey's work with heavy water, Meitner's discovery of the meaning of fissionable uranium, Anderson and the cyclotron, Van de Graaff and the electrostatic generator, early work with projected X-rays, and many others, actually stimulated other scientists reading our accounts to further thought and action, and actually hastened both scientific progress and personal recognition for the pioneer scientists themselves.*

This is certainly true of the writings of British science writers like J. G. Crowther and Ritchie Calder, who have pinpointed current research and its social implications so ably that new lines of development have been opened up.

Unesco wishes to help the formation of associations of science writers throughout the world. When there are sufficient groups, the plan is to consider the establishment of an international federation of associations of science writers.—*Unesco Courier.*
